## CHAPTER 1 PROPOSED ACTION

### 1.1 Introduction

This Environmental Assessment (EA) has been prepared in accordance with the National Environmental Policy Act (NEPA) (42 United States Code 4321-4335) and the Council on Environmental Quality (CEQ) (Title 40 Code of Federal Regulations 1500-1508 regulations). Guidance for the preparation of the EA includes the FAA's *Environmental Impacts: Policies and Procedures* (FAA Order 1050.1F), the *National Environmental Policy Act (NEPA) Implementing Instructions for Airport Actions* (FAA Order 5050.4B), FAA's 1050.1F 2020 Desk Reference, and TDOT Aeronautics *Environmental Standard Operating Procedures, Version 1.0*. The EA reviews the proposed Oak Ridge Airport and evaluates the potential environmental effects associated with disturbance during construction or operations once the project is complete.

### 1.2 Proposed Action

The City of Oak Ridge (COR), Tennessee proposes to construct a new general aviation airport to serve the unmet need for the general public and aviation users in East Tennessee. The proposed site for the airport is located in Oak Ridge, Tennessee, a city established 25 miles west of Knoxville in 1942 by the U.S. Army Corps of Engineers as one of three major locations for the Manhattan Project.

The proposed Airport is located within Roane County, directly north of Highway 58, in the East Tennessee Technology Park (ETTP). The Department of Energy (DOE) established the ETTP in the mid-1990s after a multi-year, multi-billion-dollar remediation program to transform the former Oak Ridge Reservation (ORR) and Oak Ridge National Laboratory (ORNL) uranium production complexes. Due to this unique history, the surrounding area contains legacy contamination, including buildings, roads, utilities, surrounding grounds, and the ponds on both sides of Highway 58 that border the proposed airport. Previous studies including the Preliminary Planning Study (2011) and Programming Report (2012) referred to the proposed airport location as the "Heritage Center Site".

The proposed runway is 5000' in length by 75' wide in the initial term with potential ultimate widening to 100'. It will be oriented northeast-southwest and be designated Runway 6-24. The Runway will maintain a FAA Runway Design Code (RDC) of B-II in the initial term and a C-II in the ultimate term. An associated 35' wide partial parallel taxiway will be positioned 300' from the runway centerline in the initial phase of development, extending to the runway's full length in the ultimate phase. Airfield navigational aids will include a beacon, wind indicator/segmented circle, Precision Approach Path Indicators (PAPI), airfield signage, Medium Intensity Runway/Taxiway Lighting (MIRL/MITL), and an Automated Weather Observation Station (AWOS).

Due to the location of an inactive waste disposal area northwest of the runway, Poplar Creek off the south end, the historic Wheat Community off the north end, and the associated grading required to develop this area, the buildout of the airport is positioned south of the runway and directly north of Highway 58. The ultimate airside and landside buildouts will consist of an approximate 30,000 sq. yd. parking apron, 2,500 sq. ft. terminal building, 11 conventional box hangars, and four 10-unit T-hangars. Other facilities will include auto parking and two 10,000 gallon above ground fuel tanks (100LL and Jet A). The construction of the airport and facilities will involve the excavation of a hill on the north half of the site to be used as fill on the remediated areas of the south half of the site. The filling and limitation of ground disturbance in these remediated areas are meant to

avoid significant environmental impacts. In total, the proposed Airport occupies an area of 323 acres in the initial property boundary plus an additional 15 acres in the ultimate property boundary. Heritage Center Boulevard will be maintained as the main entrance into the ETTP campus by the addition of a vehicular bridge transiting under the proposed runway.

Other roadways and infrastructure including Europa Avenue, Victorious Boulevard, Allied Avenue, and Aluminum, Chromium, and 1st Streets within the ETTP campus are to be closed and removed to accommodate the airport's construction. Perimeter Road will be closed for public use but retained under control of the airport for special access oversized loads. Haul Road, a road built by DOE for the sole purpose of removing remediated material from the ETTP to designated authorized landfills, will be maintained until August 2024 and then permanently closed. In the long-term timeframe when the airport obtains a higher C-II RDC classification, the portion of Blair Road that turns south towards US 58 would then be reconfigured and relocated outside of the Ultimate Runway Protection Zone (RPZ).

The ETTP site is also currently served by a short-line railroad of Norfolk Southern. A spur from this short-line travels from the ETTP, through the proposed airport site, and south along US 58 to the DOE Powerhouse site adjacent to Poplar Creek. The railroad track of the spur is owned by Energy Solutions. Originally, the COR was informed by Energy Solutions that it was their intention to abandon the rail and have it removed for the airport's development. However, Carbon Rivers, a company operating at the Powerhouse site, has expressed interest in using the spur to transport inventory to their site. Consequently, the existing rail spur to the powerhouse site will be maintained by a rail bridge transiting under the proposed runway. The new rail bridge will parallel the proposed vehicular bridge maintaining Heritage Center Boulevard.

In addition to the rail spur and local roads, three buildings, 1000, 1007, and 1225 are within the airport footprint and will be demolished to construct the airport site. Existing site utilities currently enter the ETTP from US 58 along Heritage Blvd. A utility corridor will be provided in conjunction with the vehicular bridge to maintain utility access. The DOE also maintains numerous groundwater monitoring stations throughout the ETTP complex. Those monitors within the limits of the airport construction will be permanently closed and capped. The configuration of the runway will initially support non-precision instrument approaches with vertical guidance and not less than 1 mile visibility to both ends of the runway and ultimately provide not less than 3/4-mile visibility from the south. The COR will own in fee simple the initial and ultimate northern RPZs. For the purposes of runway approach protection, the DOE by agreement will enable the COR to clear and grub trees within the northern approach. The areas will be graded, sowed, and maintained by the COR. Areas within the Cemetery will continue to be maintained by the DOE. For the southern RPZ and approach clearing, a total of approximately 49 acres are proposed to be controlled by a combination of fee simple and avigation easements. Figure 1-1 shows the proposed action with the rail and vehicular bridges and initial and ultimate RPZ.

### **1.3 The Requested Federal Action**

The requested Federal Action is the unconditional approval of the ALP of the proposed project identified in this EA and the possible Federal funding of the project.

## CHAPTER 2 PURPOSE AND NEED

The primary purpose of the proposed airport is to alleviate the unmet general aviation air service need for the Oak Ridge, Tennessee area, and to further the safety and efficiency of the aviation system in East Tennessee. An ancillary benefit is the ability to leverage the proposed airport with extensive existing assets in the East Tennessee Technology Park (ETTP) including land, power, rail, and water, to enhance regional economic development and industrial investment.

The need for a general aviation airport serving the Oak Ridge area has been recognized by local civic leaders for over 5 decades. Local efforts began with the establishment of the Oak Ridge Airport Study Committee in October 1960 by Mayor A.K. Bissell. Between 1960 and 1976, a total of 10 separate airport site selection studies were conducted. In these studies, and in many similar efforts since, numerous locations and configurations for a general aviation airport have been considered. However, none were successful due to factors ranging from site suitability and environmental concerns, to feasibility and cost considerations.

Recent efforts began in 2009, when the Metropolitan Knoxville Airport Authority (MKAA) noted the increasing demand for business and private air travel throughout the Knoxville Metropolitan Statistical Area (MSA). In September 2009, the MKAA agreed to sponsor a preliminary study regarding the potential for a new general aviation airport on the Oak Ridge Reservation (ORR). This concept keeps with long-term goals of the DOE Reindustrialization Program, which began in 1996 to make land, facilities, and equipment at the ETTP available for reuse by businesses and industries. This preliminary study began a multi-phase, multi-year process that continues to this Environmental Assessment and includes the documentation as described in the paragraphs below.

Collectively these efforts study, analyze, and document the purpose and need of the proposed airport including:

- Aviation access to the Knoxville MSA
- Improvements to air safety and efficiency
- Satisfy un-met demand

The Knoxville Metropolitan Statistical Area (MSA) represents eleven counties and is the third largest metropolitan area in Tennessee. In 2019, the metro area had an estimated population of 1,045,111 with Oak Ridge being the second largest city in the MSA. The aviation demand in the MSA is large with over 900 aircraft and nearly 1,800 airmen registered within a 60-minute drive of the proposed airport. The Knoxville MSA has seen a continued growth in not only population but also aircraft ownership and an increase in general aviation aircraft size. Specifically, the MKAA has documented an increase in registrations, operations, and hangar requests by FAA Airport Approach Category (AAC) B and C aircraft. The 2018 Master Plan forecast identified over 700 annual aircraft operations of AAC-B and C aircraft which would realize the benefits of the proposed airport.

Within the Knoxville MSA, there are two main NPIAS airports that serve the majority of general aviation air service in the area, McGhee Tyson Airport (TYS) and Knoxville Downtown Island Airport (DKX).

The McGhee Tyson Airport (TYS) is a primary small hub airport in the NPIAS. It handles approximately 100,000 annual operations and over 1 million passenger enplanements. The airport's primary focus is to accommodate commercial airline, air cargo, military, aircraft maintenance, and large corporate activity. Compared to the majority of general aviation pilots, users at TYS typically include professional pilots familiar with operating among aircraft of varying aircraft sizes in a complex commercial airport environment.

As a result, Knoxville Downtown Airport functions in the NPIAS as a Reliever airport to relieve general aviation congestion at TYS and provide greater general aviation access to the greater area. While successful in this purpose, DKX itself is overly congested and cannot accommodate sufficient expansion. According to analysis in the 2018 Proposed Oak Ridge Airport Master Plan, DKX ranks in the 99<sup>th</sup> percentile of busiest airports in the country in terms of based aircraft. Due to the location on an island, DKX is constrained from expansion and development and cannot handle larger than Runway Design Code (RDC) B-II aircraft. In fact, no airports in the MSA other than TYS can accommodate C-II general aviation aircraft.

Additional evidence of unmet need can be seen in the number of private airports located within the MSA and the level of activity at these airports. Two non-NPIAS private airports, Sky Ranch (TN98) and Oliver Springs Inc (TN08), exist within the MSA. Excluding those airports with zero based aircraft throughout the entire United States, TN98 is in the top ten percent and TN08 is in the top 20 percent for based aircraft. While private airports can serve as viable alternatives, in many cases, these airports do not provide the minimum safety and design standards prescribed by the FAA. Construction of a supplemental NPIAS airport, meeting all FAA design standards will improve the safety and efficiency of general aviation air service throughout the MSA.

The proposed Oak Ridge airport would fall into the NPIAS category of a Reliever Airport to the Knoxville area's McGhee Tyson Airport. As a Reliever Airport, the proposed Oak Ridge facility would offer an alternative for general aviation aircraft over the use of McGhee Tyson in order to help relieve congestion and provide improved general aviation access to the overall community. Ultimately as a C-II airport, the proposed airport would also complement Knoxville Downtown Island Airport by providing additional regional aviation capacity and capability. As all current NPIAS airports are located more than 30-minute travel time from the Oak Ridge Central Business District, the proposed airport will also meet the direct demand for air service for the Oak Ridge community.

**Relevant Documentation:**

**Phase I - Preliminary Planning Study (2011):** This study was prepared in coordination with Department of Energy (DOE) and the Community Reuse Organization of East Tennessee (CROET) and included a broad evaluation of three potential airport development sites on the ORR (Heritage Center, Parcel ED-3, and Horizon Center). The study considered factors such as environmental and terrain constraints, airspace, obstructions, and proximity to landfills. The study concluded that construction of a general aviation airport was feasible at all three sites. The study determined that further examination of the sites was necessary before selection of a single recommended site for the proposed airport.

**Phase II - Preliminary Planning and Programming Study (2012):** This report analyzed multiple airfield layouts to develop more detailed findings regarding airspace constraints and obstruction removal requirements, potential environmental impacts, and construction factors such as anticipated costs, earthwork quantities, expansion capability, and building demolition requirements at each of the potential sites. Based upon a priority ranking of multiple alternative layouts, the Programming Report, completed in 2012, concluded that the Heritage Center Site-Concept 3 was the most favorable for constructing a new general aviation airport in Oak Ridge.

**Phase III - Justification Study (2013):** The study was prepared in May 2013 to outline the justification for a new airport in accordance with FAA guidelines. The study identified the FAA criteria required for a new airport to be included in the National Plan of Integrated Airport Systems (NPIAS) and described how the proposed airport would satisfy the associated criteria. A survey of pilots and businesses was conducted in February 2013 to gauge the local support for a new airport and to understand the existing unmet demand. A summary of the findings is included in the 2013 Justification Study.

**Re-validation in the National Plan of Integrated Airport Systems (2015):** The National Plan of Integrated Airport Systems (NPIAS) is the FAA's the federal plan for the public aviation system in the United States. By definition, inclusion in the NPIAS signifies the Secretary of Transportation has determined the airport "necessary to provide a safe, efficient, and integrated system of public-use airports adequate to anticipate and meet the needs of civil aeronautics." Airports included in the NPIAS are also eligible to receive grants through the Airport Improvement Program (AIP). A proposed Oak Ridge Airport has been included in the NPIAS and was originally included in the NPAIS beginning in 1993. On January 13, 2015, the FAA revalidated the inclusion of the proposed new Oak Ridge Airport planning site in the NPIAS (NPIAS No. 47-0057).

**Environmental Assessment – Property Transfer for General Aviation Airport (2016):** In February 2016, the Department of Energy (DOE) completed an Environmental Assessment (EA) (DOE/EA-2000) for the title transfer of U.S. Department of Energy (DOE) property located at the East Tennessee Technology Park (ETTP) Heritage Center for the purpose of constructing and operating a general aviation airport. Based on the results of the analysis reported in the EA, DOE has determined that the transfer of the property for a general aviation airport would not significantly affect the quality of the human environment and issued a Finding of No Significant Impact (FONSI).

**Airport Master Plan and Airport Layout Plan (2018):** Consistent with FAA Advisory Circular (AC) 150/5070-6B, an airport master plan is a systematic method that provides a framework to facilitate and guide both near- and long-term airport development. The result of the Plan was development guidance to meet the un-met aeronautical needs in the Oak Ridge Area and strategy to meet those needs. The study also performed an analysis of the monetary benefits of the proposed airport, which showed \$358,000 in annual additional costs are incurred annually on local recreational/business air travel due to the unmet need. In addition to the plan, this effort also included a corresponding production of an Airport Layout Plan (ALP) set. The ALP is a set of drawings which graphically depict the current and future facilities at an airport. The Airport Layout Plan, gained FAA conditional

approval on March 4, 2019, and it included development to support the forecast of around 12,000 short term annual aircraft operations.

**AGIS Survey and Approach Study (2020):** The Metropolitan Knoxville Airport Authority conducted an Airports Geographic Information System (AGIS) Survey in 2020 to assess if the proposed airport as defined in the Airport Layout Plan could support relevant Instrument Flight Procedures (IFP) with useful weather minima. The FAA's AGIS program specifies that safety critical airport data, such as IFP obstruction surveys, be obtained and submitted in a specified data schema for review and approval by the FAA and/or National Geodetic Survey (NGS). On July 8, 2020, upon completion of this AGIS survey and FAA IFP study for Oak Ridge, the FAA's Memphis Airports District reported the approach types and anticipated minimums for the proposed Airport:

**Initial Build**

Runway 6: Non-precision GPS/RNAV non-vertically guided – 1 mile/507 feet minimums

Runway 24: Visual approach

**Ultimate**

Runway 6: Non-precision GPS/ RNAV non-vertically guided – ¾ mile/507 feet minimums

Runway 24: Non-precision GPS/ RNAV non-vertically guided – 1 mile/507 feet minimums

In summary, based on their review of the data, the FAA concluded that the conditions noted in the FAA Airport Layout Plan approval letter have been satisfied with respect to instrument approach feasibility.

**Preliminary Engineering Study (2021/2022):** As part of the preliminary engineering due diligence efforts the runway alignment shown on the Airport Layout Plan was shifted slightly to the southeast. The new alignment slides the airport to the southeast to provide non-precision, instrument approaches, with vertical guidance and up to ¾ mile visibility minimums to both ends of the runway. The shift also moved the runway further from the national park, the Wheat Community area and the Black Oak Ridge Conservation Easement and moved the George Jones Memorial Baptist Church off the centerline of the northern approach.

## CHAPTER 3 ALTERNATIVES

This section describes the capabilities and limitations of alternate ways to meet the proposed need described in Chapter 2. To remain compliant with applicable TDOT Aeronautics and FAA regulations, the guidelines established in FAA Order 1050.1F were followed in the consideration of logical alternatives to the Proposed Action. As outlined previously, the aviation need for the project is a function of aviation access to the Knoxville Metropolitan Statistical Area (MSA); improvements to air safety and efficiency, and to satisfy unmet aviation demand. The alternative ways investigated to meet this project need include the consideration of the following primary alternatives and their iterations:

- Alternative 1: Do Nothing
- Alternative 2: Utilization of Surrounding Airports
- Alternative 3: Construct a New General Aviation Airport

### 3.1 Alternative 1: Do Nothing

A Do-Nothing alternative entails no action and maintaining the status quo. Maintaining the status quo does avoid the select environmental impacts associated with the construction of a new airport. However, the potential challenges and consequences from choosing the alternative must be considered and weighed holistically.

As previously described, the Knoxville Metropolitan Statistical Area (MSA) represents eleven counties and is the third largest metropolitan area in the state of Tennessee. In 2019, the metro area had an estimated population of 1,045,111 with Oak Ridge being the second largest city in the MSA. There are currently no air service facilities that currently exist to meet the demand for access to the City of Oak Ridge and the Oak Ridge Reservation (ORR) including the East Tennessee Technology Park (ETTP), Oak Ridge National Laboratory (ORNL), and Y-12 sites. Therefore, all potential users of local air travel including recreational, business, and corporate/executive must drive approximately 34 miles to reach McGee Tyson Airport (TYS) or Knoxville Downtown Island Airport (DKX) for aviation access. This journey takes up to 45 minutes and results in a penalty cost of \$422,440 annually<sup>1</sup>.

A greater consequence of the lack of adequate aviation access is the constraint a Do-Nothing alternative places on business and industrial recruitment. In today's global market, business, industrial, and manufacturing corporations have identified the existence of a business jet capable airport as a key factor when considering areas for business establishment or expansion. With only TYS being capable to support the movement of personnel and goods by aircraft B-II and greater classification, this alternative will continue the competitive disadvantage for business and industrial opportunities to the Oak Ridge Area. This is further enhanced by the fact that the ETTP, ORNL, and Y-12 facilities conduct highly technical, specialized and research activities that would greatly benefit from a nearby business jet capable airport. Indeed, surveys and support letters from existing businesses in the ETTP and ORNL have documented the immediate need for nearby air service access.

---

<sup>1</sup> 2018 Proposed New Oak Ridge Airport Master Plan adjusted 18% for inflation from 2018-2022

Furthermore, the ETTP itself may be hindered in its goal of the recruitment of industrial and research users due to the lack of aviation access supporting the movement of sensitive and/or specialty cargos. One such cargo is medical radioactive isotopes that require expedited delivery due to their short effective lifespans. The lack of a business class airport would negatively impact the continued reindustrialization and transformation of the ETTP, which could have long-term consequences to the economic health of the area. If a new airport was not constructed, the ETTP itself would not gain a compatible land use that occupies a large footprint of formerly impacted property.

Additionally, if an airport were not constructed, the Manhattan Project National Historical Park would not gain any benefit from increased accessibility to the park similar to the way the general aviation airport in Sevierville provides to the Smoky Mountains National Park.

Another secondary impact of the Do Nothing alternative would include the loss of direct revenues generated by an airport such as fuel sales, hangar rents, fees, and indirect/multiplier impacts from the revenue generated in the community.

Lastly, the FAA has identified and revalidated the inclusion of the proposed new Oak Ridge Airport planning site in the National Plan of Integrated Airport Systems (No. 47-0057). A Do-Nothing alternative would remove any possible benefit the Nation’s airport system would gain from a new facility.

Provided all the consequences above, the Do-Nothing alternative would significantly restrict aviation access, efficiency, and long-term economic health of the community.

### 3.2 Alternative 2: Utilization of Surrounding Airports

The 2018 Proposed New Oak Ridge Master Plan explored the possibility to utilize the airports in the region to accommodate the demand for general aviation access to the Oak Ridge Area. The report detailed the analysis of 6 airports within a 30-nautical mile radius of the proposed airport. Four of these airports are public use which are included in the National Plan of Integrated Airport Systems (NPIAS). The remaining two airports are private-use and are not included in the NPIAS. Table 3-1 identifies the airports, distance and direction from the Oak Ridge Central Business District (CBD) and available runways. Figure 3-1 graphically depicts these airports.

**Table 3-1 Airports in Proximity to Oak Ridge CBD**

Airport	Use	LOC ID	Associated City	Minutes from Site	Min from Oak Ridge CBD	Dist. (NM) from Site	Runway(s)	Based Aircraft
Oak Ridge (Proposed)	PU	N/A	Oak Ridge	-	14	-	06/24 - 5,000 ft.	13
Oliver Springs Inc.	PR	TN08		18	10	7.5 (NE)	15/33 - 2,800 ft.	22

Source: 2018 Proposed New Oak Ridge Master Plan

Two main airports in the Knoxville MSA serve the majority of general aviation traffic for the Oak Ridge area, McGee Tyson Airport (TYS) and Knoxville Downtown Island Airport (DKX).

**McGee Tyson Airport (TYS)** is a primary small hub airport accommodating 100,000 annual operations and 1 million annual commercial service enplanements. It maintains a mix of air carrier, general aviation, cargo, and military activity. With two parallel runways measuring 10,000' (5L-23R) and 9000' (5R-23L), this is the only airport in the region that can accommodate aircraft greater than a B-II classification. While able to accommodate general aviation, future expansion of general aviation services and facilities is extremely limited and constrained. TYS has reported 186 based aircraft and maintains an extensive waitlist. The Fixed Base Operator (FBO) reports that smaller general aviation hangars are likely to be replaced with larger hangars in the near future. This would result in the displacement of the lighter general aviation based at TYS to other area airports. The closest general aviation airport to TYS is Knoxville Downtown Island Airport (DKX).

**Knoxville Downtown Island Airport (DKX)** is a general aviation airport located 3 miles east of the city of Knoxville. TYS is classified as a general aviation reliever airport for TYS. Reliever airports are those designated by FAA to relieve congestion at a commercial service airport and provide additional general aviation access to the overall community. As its name implies, DKX is fully contained on the Dickinson Island in the Tennessee river. The airport maintains a single 3,499 foot by 75-foot paved runway, designated 08/26. The runway meets Runway Design Code (RDC) B-II design standards and has a 40-foot-wide full-length parallel taxiway. Aircraft parking is available on multiple aprons south of the parallel taxiway centerline. Due to the airport's location on an island, and the location of existing infrastructure, expansion to meet the needs of larger category B or category C aircraft is physically not possible.

Alternative to TYS and DKX, some general aviation users have turned to private airports located throughout the MSA. These facilities, however, are limited to turf runways that do not always meet FAA design standards, which are not able to satisfy the need for corporate/business aircraft and flight training.

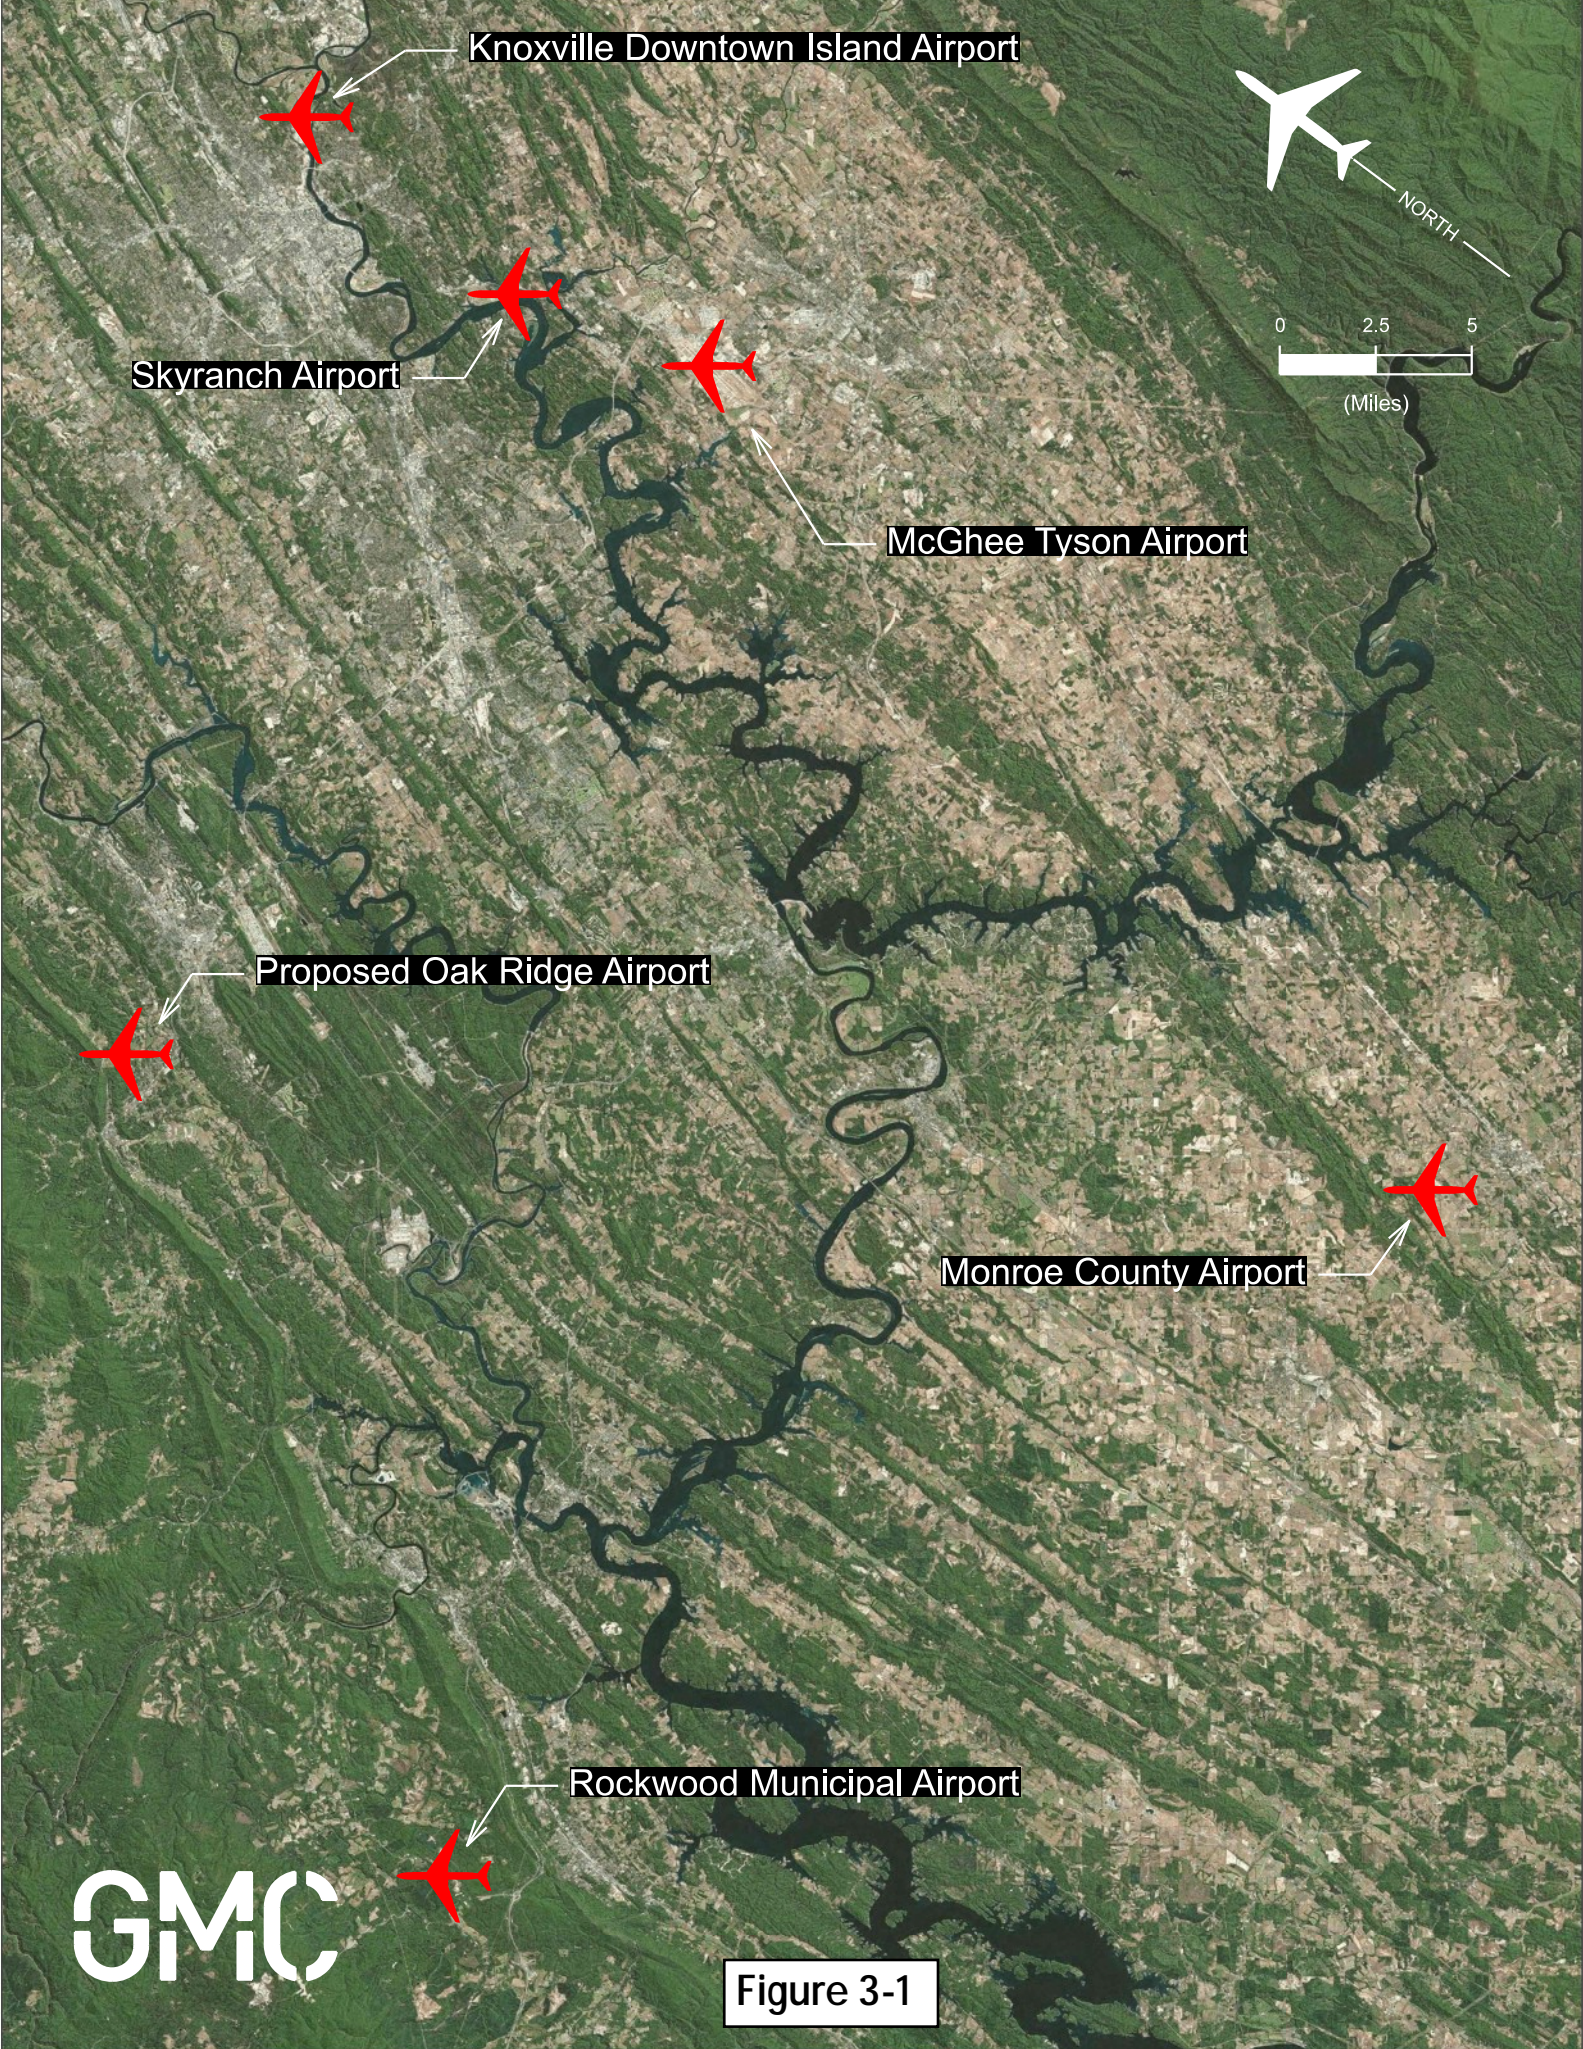

**Oliver Springs Inc. Airport (TN08)** is the most significant private airport within 20 nm of Oak Ridge. TN08 has a 2,800-foot turf runway that is bordered by Poplar Creek on the north side and a pasture on the south. The runway is surrounded by tall trees and vegetation, as well as terrain which rises over 300 feet above the runway elevation within 300 feet of the edge of the runway. Expansion of the runway would not be possible due to the terrain and the proximity of Poplar Creek. In addition, the airport would not be able to meet current FAA airport design standards.

**Rockwood Airport (RKW)** is located approximately half an hour drive west of Oak Ridge. RKW features a single runway at 5,000 feet long and 100 feet wide. The airport hosts 16 based aircraft and approximately 17,500 annual aircraft operations. The based aircraft at RKW are all piston-engine, with 15 being single-engine and one (1) being multi-engine. Travel time between the Oak Ridge CBD to RKW is approximately 40 minutes by car, which is a similar travel time to TYS and the annual penalty cost of \$358,000 annually. While RKW is physically able to accommodate the aircraft expected at the proposed airport, RKW does not offer the level of access to the high-tech business areas in Oak Ridge as well as north and west of Knoxville that is required.

**Sky Ranch Airport (TN98)** is a privately owned, private use, airport located approximately 40 minutes' drive from Oak Ridge. TN98 is located on an island between downtown Knoxville and TYS along the Tennessee River. TN98 features a 2,100-foot turf runway with approximately 47 based aircraft. Based on the physical limitations of being located on an island in the Tennessee River, like DKX, the airport would not be able to meet the unmet demand of a B-II and greater airport.

**Monroe County Airport (MNV)** is located approximately one hour drive south of the proposed airport. The airport features a single runway at 3,643 feet long and 75 feet wide. MNV has approximately 33 based aircraft and 19,800 annual operations. Travel time between the Oak Ridge and MNV is over one hour by car. The airport would not be able to meet the unmet demand of a B-II/C-II facility, nor would it provide reasonable access to the Oak Ridge area. For these reasons, MNV does not meet the key needs identified.

Due to the surrounding airports' inability to provide larger B-II and C Category air traffic, lack of space for general aviation growth and high annual penalty cost to offer an efficient level of access to the high-tech business areas of Oak Ridge, the utilization of surrounding airports was eliminated for consideration as the preferred alternative.

### **3.3 Alternative 3: Construct a New General Aviation Airport**

As detailed in Chapter 2, the need to construct a new general aviation airport serving the Oak Ridge area has been recognized by local civic leaders for over 5 decades. Between 1960 and 1976 alone, a total of 10 separate airport site selection studies were conducted. In these studies, and in numerous similar efforts since, dozens of locations and airport configurations have been considered all around the Oak Ridge Area. However, none have been successful due to factors ranging from site suitability and environmental concerns to feasibility and cost considerations.

In September 2009, the Metropolitan Knoxville Airport Authority sponsored a Phase I study to conduct a preliminary assessment of the potential to construct a new general aviation airport on one of three sites in the Oak Ridge Reservation (ORR). At the conclusion of Phase I, it was determined that constructing a general aviation airport at one of the three locations was feasible. As shown in Figure 3-2 and described below, the three sites considered were:

1. Heritage Center Site (Concept 3)
2. Heritage Center Site (Preliminary Engineering)
3. ED-3 Site
4. Horizon Center Site

In October 2010, a Phase II continuation of the preliminary study began to examine in greater detail the design, construction, environmental, airspace, and property related factors associated with each of the three sites identified in the Phase I report. Specifically, Phase II's objectives were as follows:

- Develop detailed airport templates based on a selection of near-term and long-term facility requirements for the potential airport sites recommended in Phase I;
- Refine airport layout concepts for each site based on known constraints and selected facility requirements;
- Prepare programming cost estimates for each of the possible airport sites, so that a determination could be made regarding the financial planning of the airport; and
- Submit a programming report that summarizes the results of Phase II.

Figure 3-2

Horizon Center Site

Highway 95

Highway 327

Heritage Center Site (Concept 3)

Heritage Center Site (Preliminary Engineering)

ED-3 Site

Highway 58

### **Heritage Center Site (Concept 3)**

Located on the southern end of the East Tennessee Technology Park, the Heritage Center site resides approximately one-half mile from the former K-25 gaseous diffusion building, and numerous support facilities constructed during World War II. The Technology Park is bound by Poplar Creek to the west and north, and U.S. Highway 58 to the south.

The Phase II analysis considered a total of 11 airport alignments on the Heritage Center site with three advancing for a detailed review (Concept 1, 2, and 3). The three sites were found to require various considerations regarding airspace obstructions, demolition of existing structures and roadways, and the historic importance of the Wheat Community, Wheat Church, and Y-12 site as a whole. However, the Heritage Center Site afforded several advantages over the ED-3 and Horizon Center Sites. Primarily this was due to the fact that the site was relatively flat, and would have less “greenfield” impacts as the site had been significantly disturbed by previous developments on the campus.

### **Heritage Center Site (Preliminary Engineering)**

During the Preliminary Engineering Assessment, the Heritage Center Site Concept 3 was refined to determine the specific and optimal location and alignment of the proposed airfield. To determine this location, the social and environmental affects, as well as the operational constraints and constructability of the site was considered. After considering these factors and the coordination with our consulting partners during the Section 106 process, 10 iterations of runway alignment were considered. The runway alignment shown on the Airport Layout Plan was shifted slightly to the southeast which provided the following advantages:

- Enabled vertical guidance to both ends of runway,
- Removed identified streams between Haul Road and Blair Road,
- Enables DOE mitigation of Pond 1,
- Avoids the Black Oak Ridge Conservation Easement (BORCE),
- Reduces Wildlife Habitat (trees) affected,
- Removes Historic Wheat Church from extended runway centerline and reduces noise impacts,
- Removes viewshed impacts and enhances entrance to K-25 National Park.

### **ED-3 Site**

The ED-3 Site measures approximately 595 acres and is located immediately south the Heritage Center and Oak Ridge Turnpike along a ridgetop of Pine Ridge. The site is bounded by the Clinch River to the west, Flannigan Loop Road to the east and Bear Creek Road to the south. Heavily wooded, the site has few significant man-made features except for TVA power lines and a water storage facility.

Compared to the Heritage and Horizon center sites, the ED-3 Site topography has the largest elevation changes across the proposed site. The alignment of the airport closely follows a TVA transmission line and will require the relocation of approximately 14,000 feet of the transmission line facilities. Further, the location of the ED-3 Site requires that a City of Oak Ridge water tower (with a cumulative storage capacity exceeding 1 million gallons) be demolished and relocated. ED-3 Site has the least amount of Part 77 airspace penetrations. In addition, the sites are both located on the historic Happy Valley Worker Camp.

**Horizon Center Site**

The Horizon Center Site is north of the Oak Ridge Turnpike, and approximately 2.5 miles northeast of the Heritage Center. Horizon Center was transferred to CROET by DOE in 2003 and has been developed into a commercial and industrial park. The existing topography at the Horizon Center Site contains the most level terrain of the three alternative sites. Due to its more level terrain, the amount of earthwork required for a new airport to be constructed at the Horizon Center Site would be less than the Heritage Center and ED-3 sites.

However, the Horizon Center has the greatest number of airspace penetrations compared to the other sites. In its future configuration, the Horizon Center Site impacts a total of 2,352 acres in the future configuration. The site includes three towers that penetrate the proposed airspace surfaces. Additionally, there is a prohibition for certain land uses on the site, including airport development, in the Environmental Assessment (EA) and quitclaim deed.

**Ranking of New Airport Sites**

As a result of the initial analysis conducted during the Phase I Preliminary Planning Studies, Phase 2 - Programming Report, and 2021/2022 Preliminary Engineering Assessment, a significant amount of information was compiled and evaluated related to the design, construction, environmental, airspace, and property related factors associated with the development of a new airport to serve Oak Ridge and the surrounding communities. Table 3-2 shows the tabular comparison of the four alternative sites.

In order to establish a priority ranking of the airport sites under consideration, the Phase II study subsequently generated a matrix of the most relevant factors associated with the Initial Airport Development Plan. Each key factor was utilized in a weighted evaluation matrix to quantitatively rank the development alternatives presented. Each rating was ranked 1 through 5, with a value of 1 being associated with the least favorable rating and a value of 5 being associated with the most favorable rating. Table 3-3 shows the priority ranking of the three proposed airport sites. The Heritage Center Site Preliminary Engineering was ultimately selected as the preferred site for the proposed airport.

**Table 3-2 Comparison of Proposed Airport Sites**

	Heritage Center Preliminary Engineering		Heritage Center Concept 3		ED-3 Site		Horizon Center Site	
	Initial	Future	Initial	Future	Initial	Future	Initial	Future
<b>Design/Construction</b>

### **3.4 Identification of Preferred Alternative**

Through detailed study, analysis, and consideration the preferred alternative must address aviation access to the Knoxville Metropolitan Statistical Area (MSA), improvements to air safety and efficiency, and to satisfy unmet aviation demand.

The “Do-Nothing” alternative was rejected because of the inability to address aviation access, thereby decreasing air safety and efficiency, as well as not satisfying the unmet aviation demand. Additionally, this alternative hinders the re-use of the ETPP and the attraction and retention of business and industry to the area.

The Utilization of Surrounding Airports was also rejected because it too does not address economical access to aviation for the Oak Ridge area and does not improve aviation efficiency through establishment of a general aviation airport of B-II category or greater. Only Alternative 3: Construct a New General Aviation Airport accomplishes the purpose and need. This is the only alternative that will provide a primary runway length necessary to serve the business and private aircraft of the community, have minimal impact on the local environment, and minimize project cost while maximizing economic benefits to the Oak Ridge area.

#### **Supplemental Rail Alternative**

During the course of the Environmental Assessment, it became evident specific alternatives to maintaining rail access to the Powerhouse Site, south of the proposed alternative were necessary. Initially, it was the intent of the City of Oak Ridge (COR) to abandon the rail spur that travels from the Norfolk Southern Short Line, north of the ETPP, through the preferred airport site and on to the Powerhouse area. In April of 2021, Energy Solutions, the owners of the rail spur, submitted a letter to the COR offering to abandon the 1.67 miles of Heritage Railroad track. This offer was subject to receiving the consent of the U.S. Surface Transportation Board (STB), as Heritage Railroad operates as a common carrier under its jurisdiction. Within the abandonment application to the STB, Energy Solutions must certify that there is no current or expected future use of the rail spur. In the summer of 2022, Carbon Rivers began operations within the Powerhouse area. Carbon Rivers recycles wind turbine blades and repurposes them into various marketable materials. Shortly after beginning operation, Carbon Rivers took delivery of a shipment of wind turbine blades via the Short Rail spur. Consequently, Energy Solutions are unable to honor their commitment to the COR of abandoning the rail spur and alternatives to maintain the spur were considered.

The only two rail alternatives would be:

Rail Alternative 1: Do-Nothing

Rail Alternative 2: Rerouting or Bridging the Rail Spur

The Do-Nothing alternative would maintain the current route of the railroad spur and continue the existing route to the Powerhouse site. This alternative would avoid the environmental impacts of rerouting or bridging. It would also maintain rail access to the Powerhouse site and serve Carbon Rivers and other businesses that may choose to operate there. However, the fact that the spur traverses the preferred airport site would prevent the proposed Oak Ridge Airport from being constructed. As a result, the implementation of the Do-Nothing alternative for the rail would have the same consequences as discussed previously in this chapter if the airport were not constructed.

The second alternative looked at rerouting or bridging the rail section. The three options identified to continue rail service to the Powerhouse site included: 1) routing the spur around the south end of the runway through the Runway Protection Zone (RPZ); 2) Constructing two bridges to traverse two sections of Poplar Creek; and 3) Keep the spur in its current location and bridge the section that passes through the airport site.

Rerouting the rail through the southern RPZ would place the spur outside the Runway Safety Area but in the widest portion of the RPZ. Like Perimeter Road, the rail spur would be considered an incompatible land use being introduced into the RPZ of a new airport. As a result, the spur would have to be routed outside the RPZ or bridged. Since the Ultimate RPZ extends across Poplar Creek, rerouting outside the RPZ is not possible. Also, any alternative that would attempt to bridge the Ultimate RPZ would be a minimum of 1,000' long. Due to this option's land use incompatibility and potential cost to bridge at least 1,000' of the RPZ, this was not considered a viable option.

The second option looked at constructing two bridges across two sections of Poplar Creek to reach the Powerhouse area. This option would require the construction of over 6'100' of new rail and two bridges measuring a minimum of 500' each to access the Powerhouse site. Due to the social, environmental, and cost of constructing this option, it was not removed from consideration.

The final option was to leave the existing spur in place and construct a rail bridge to span that portion of rail that crosses the proposed airport site. This option was preferred for several reasons. First it leaves the rail spur in place, avoiding the social and environmental impacts associated with a new route. Secondly, it allows the rail to remain operational. The rail can continue to service the Powerhouse tenants creating job and economic opportunities, and the construction of the bridge will not hinder or delay the construction of the proposed Oak Ridge Airport. Also, with a bridge width of only 380' and at a cost of 6.3 million dollars, it is the least expensive of the three options. As the least socially and environmentally financially impactful option, it was selected as the preferred option and incorporated in the preferred airport development alternative.

## CHAPTER 4 AFFECTED ENVIRONMENT

The TDOT Aeronautics Environmental Standard Operating Procedure (SOP), issued January 2020, indicates that if the FAA determines that a full EA must be prepared for a Proposed Action, the required procedures, format, and content described in Chapter 6 of FAA Order 1050.1F, Environmental Impacts: Policies and Procedures (July 2015) must be used. Therefore, the purpose of this chapter is to “succinctly describe the environmental conditions of the potentially affected geographical area” of the proposed action and alternatives, as stated within FAA Order 1050.1F. The level of detail implemented while preparing this chapter coincides with the extent of expected consequences of the proposed airport.

FAA Order 1050.1F provides fourteen (14) environmental resource categories to be assessed and, where established, provides for each an appraisal threshold for potential impacts. Construction and secondary (induced) impacts that may be generated are addressed within each category. Cumulative impacts are similarly discussed. The categories for assessment are:

- Air Quality
- Biological Resources
- Climate
- Coastal Resources
- Department of Transportation Act, Section 4(f)
- Farmlands
- Hazardous Materials, Solid Waste, and Pollution Prevention
- Historical, Architectural, Archeological, and Cultural Resources
- Land Use
- Natural Resources and Energy Supply
- Noise and Noise-Compatible Land Use
- Socioeconomics, Environmental Justice, and Children’s Environmental Health and Safety Risks
- Visual Effects
- Water Resources

The February 2020 FAA 1050.1F, “2020 Desk Reference” also gives details on the type and scale of analysis to be performed for each suspected impact category. The 2020 Desk Reference is intended to be used to supplement FAA Order 1050.1F. These reference materials were applied in describing the affected environment and the possible impacts that may be generated by implementation of the Proposed Action. From this guidance, twelve (12) environmental resource categories were identified as being present within the geographical area of the Proposed Action and reasonable alternatives. These categories are further addressed in the following subchapters.

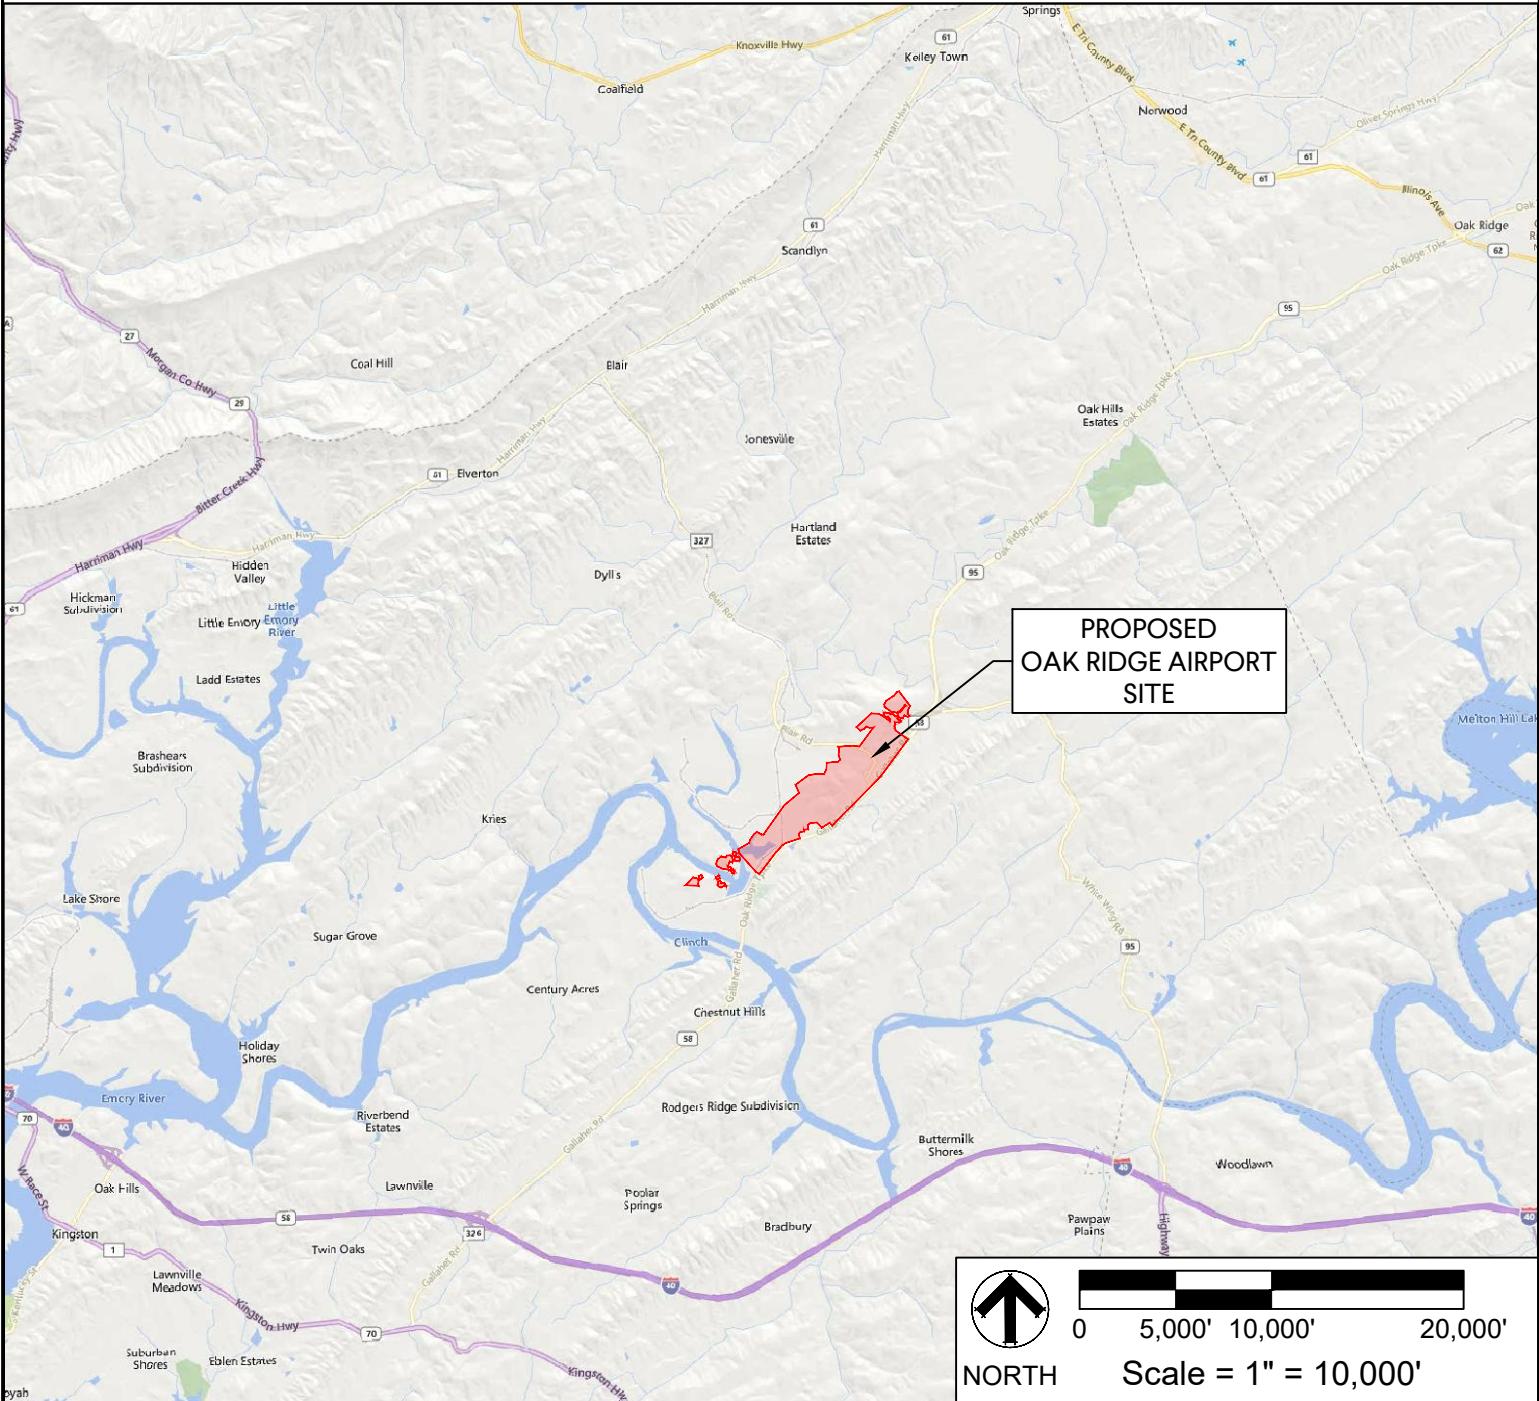

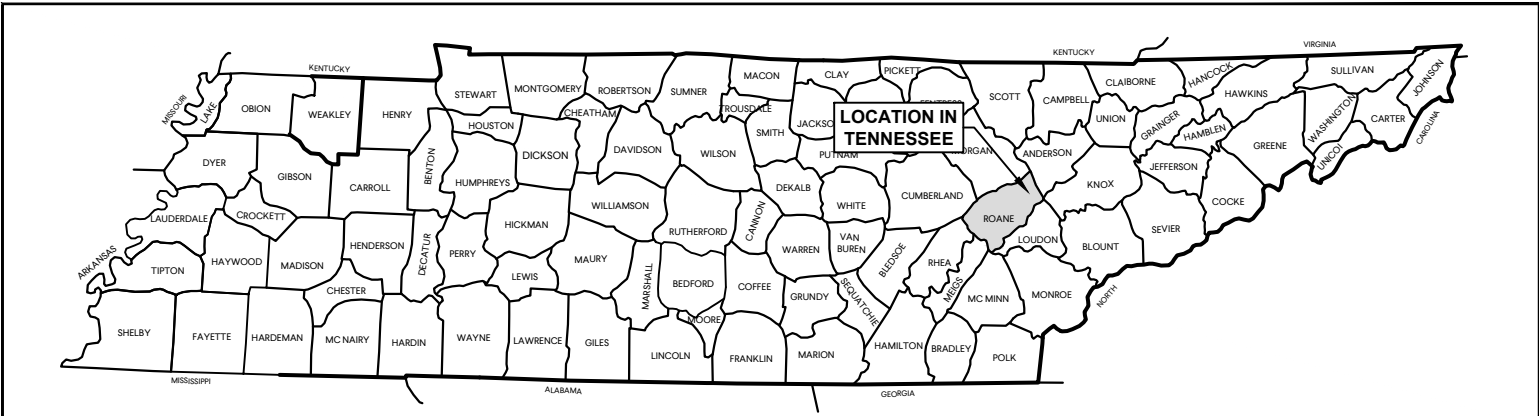

### 4.1 General Project Setting

The proposed Oak Ridge Airport is located on the west side of Oak Ridge Turnpike (Hwy 58) south west of the City of Oak Ridge in Roane County, TN, approximately 25-miles west of Knoxville. The proposed airport location is further described as being located on the eastern portion of the Heritage Center of the East Tennessee Technology Park (ETTP) on the Oak Ridge Reservation (ORR). It is situated just north east of a long meandering bend of Poplar Creek and ranges in elevation from approximately 1,000 to 800 feet above mean sea level (MSL).

The ETTP is accessed from Hwy 58 via Perimeter Road, Heritage Center Boulevard, Americus Ave, Victorious Blvd, and Blair Road. Heritage Center Blvd is a divided median road that serves as the main entrance to the ETTP and the K-25 History Center and National Park. All four of the roads traverse the proposed action site. A fifth road that is used to access the ETTP site is Haul Road. It is located on the north end of the site. It was constructed by the DOE to transport waste materials from the ETTP, over Hwy 58, to landfills located to the northeast. Haul Road is a “restricted access” roadway and only DOE vehicles are allowed to use it. A project Location Map and Vicinity Map are provided as Figure 4-1 and Figure 4-2 USGS Quadrangle Map. Industrial properties are located within the central portion and north of the proposed airport location and the rest of the proposed airport location and surrounding areas consists primarily of forested land. The proposed airport, and associated project area, is situated within the Ridge and Valley physiographic region of Tennessee, which is a relatively low-lying region between the Blue Ridge Mountains to the east and the Cumberland Plateau to the west. General land uses within a five-mile radius of the proposed airport would be categorized as forested mountain ranges, industrial land, and low density residential and commercial areas.

For the purpose of this EA, two study areas have been defined. The primary study area (PSA) is approximately 530-acres and is the area that was determined would potentially experience direct physical disturbance during the construction and operation of the proposed action. Some resource categories could have a potential to create impacts outside of the primary study area (i.e., noise, air, and land use); therefore, the secondary study area includes areas where both direct and indirect impacts may occur as a result of the proposed project. Both study areas are shown on Figure 4-3. The 530 acres designated for the construction and operation of the proposed Oak Ridge Airport is a combination of fee simple acquisition and DOE donated land. Once DOE releases ETTP property for redevelopment, it is transferred to CROET (Community Reuse Organization of East Tennessee) to develop and/manage. Consequently, all the property for the proposed action, with the exception of buildings 1007 and 1225 that are owned by JMM Realty, is being donated to the COR either directly from DOE or through CROET. Buildings 1007 and 1225 are to be purchased by the COR in fee simple.

The area to be directly impacted by the proposed airport construction consists of industrial areas and forested land. The PSA contains both upland and wetland habitats; as well as, several streams and portions of floodplain. The Wheat Community Archaeological District (40RE224), the George Jones Memorial Baptist Church site, which is listed on the National Register of Historic Places, and portions of the Black Oak Ridge Conservation Easement (BORCE) are located in the northeast corner of the PSA. In addition to these resources within the PSA, the K-25 Historical Area and the Happy Valley Work Camp (40RE577) are located within the secondary study area. The limits of these features are depicted on Figure 4-4.

## 4.2 Non-Applicable Environmental Impact Categories

Per FAA Order 1050.1F, “[i]f an environmental impact category is not relevant to the proposed action or any of the reasonable alternatives identified (i.e., the resources included in the category are not present or the category is not otherwise applicable to the proposed action and alternative[s]), this should be briefly noted and no further analysis is required.” Therefore, the following is a list of resources that the No Action and/or the Proposed Action would not affect as they are not present within or near to the study area:

### 4.2.1 Coastal Resources

Roane County is not located within the Coastal Barrier Resource System as defined by the Department of the Interior (DOI) under The Coastal Barrier Resources Act of 1982. Similarly, the Coastal Zone Management Act of 1972, as administered by the National Oceanic and Atmospheric Administration (NOAA), and the NOAA National Marine Sanctuaries Act, are not applicable to the water resources of Roane County, Tennessee. Therefore, coastal resources are not relevant to this assessment.

### 4.2.2 Farmland

According to the Farmland Protection Policy Act (FPPA), “Farmland” does not include land already in or committed to urban development or water storage. The proposed project area meets the definition of land already committed to urban development and is therefore not considered farmland under the FPPA and farmland is not relevant to this assessment.

## 4.3 Suspected Environmental Impact Categories

The environmental resource categories listed below are, or may be, present within the geographical area of the Proposed Action or any reasonable alternatives. This determination was made after consulting with applicable regulatory agencies and after thorough investigations of the study areas. These categories, and the potential for significant impacts, and any required mitigation, are further discussed in the following chapter.

- Air Quality
- Biological Resources
- Climate
- Department of Transportation Act, Section 4(f)
- Floodplains
- Hazardous Materials, Solid Waste, and Pollution Prevention
- Historic, Architectural, and Archeological Resources
- Land Use
- Natural Resources and Energy Supply
- Noise and Noise-Compatible Land Use
- Socioeconomics, Environmental Justice, and Children’s Environmental Health and Safety Risks
- Visual Effects
- Water Resources

## CHAPTER 5 ENVIRONMENTAL CONSEQUENCES AND MITIGATION

Based on guidance provided in FAA Order 1050.1F, this section of the EA provides detailed information on the analysis and evaluation of potential environmental impacts associated with the Preferred Alternative compared to the No Action alternative. It also provides information on the applicable regulatory settings, and the special purpose laws, if any, associated with each impact category. Per FAA Order 1050.1F, data and analyses provided herein are “presented in detail commensurate with the importance of the impact.”

The FAA has established significance thresholds for most, but not all environmental categories, as identified in FAA Order 1050.1F and the associated 2020 Desk Reference. Table 5-1 provides a summary listing of the suspected environmental impact categories identified in Chapter 4 along with a brief identification of potential impacts beyond FAA significance thresholds (if established). Potential effects from construction impacts of the proposed action and cumulative impacts, as required in the FAA Order 1050.1F, are also included.

**Table 5-1 Summary of Potential Impacts from Preferred Alternative**

<b>Environmental Impact Category</b>	<b>Potential Impact?</b>
Air Quality	Below significance thresholds
Biological Resources	Below significance thresholds
Climate	No
Department of Transportation Act, Section 4(f)	Below significance thresholds
Hazardous Materials, Solid Waste, and Pollution Prevention	Below significance thresholds
Historic, Architectural, and Archeological Resources	No
Land Use	No
Natural Resources and Energy Supply	No
Noise and Noise-Compatible Land Use	Below significance thresholds
Socioeconomics, Environmental Justice, and Children’s Environmental	Below significance thresholds
Health and Safety Risks	Below significance thresholds
Visual Effects	No
<b>Water Resources</b>	<b>Yes</b>
Cumulative Impacts	Below significance thresholds

*Source: GMC Oak Ridge Airport EA Summary Data 2023*

The sections following describe the regulatory setting, significance thresholds, where set, and environmental consequences of each resource that the Preferred Alternative and No-Action alternative may potentially affect. If an alternative evaluated in this section would result in significant environmental impacts, mitigation measures to address such impacts are also discussed. Mitigation measures as defined by 40 CFR include steps to avoid, mitigate, minimize, rectify, reduce, or eliminate the impact associated with a proposed agency action. The objective of mitigation is to control disturbance of the environment, including the individuals, and habitat that live in the environment. As detailed in Chapter 4, resource categories Coastal Resources and Farmland are not relevant to the proposed activities. No further analyses of these are required and, therefore, are not included in this chapter.

## **5.1 Air Quality**

The affected environment for air quality has been determined to not only include the Primary Study Area (PSA) but also the area immediately adjacent to the proposed project footprint. Potential impacts to air quality must be considered under both the Clean Air Act (CAA) and NEPA, as a part of FAA requirements. Air quality assessments are required for any Proposed Action receiving federal funding.

### **5.1.1 Regulatory Setting**

Air quality is monitored by the United States Environmental Protection Agency and is enforced under provisions of the Clean Air Act (CAA). The EPA has a classification system to designate areas throughout the United States according to the level of pollution in the air. These areas are known as attainment and non-attainment areas. Non-attainment is an area that does not meet one or more of the National Ambient Air Quality Standards (NAAQS) for the criteria pollutants designated in the CAA. An attainment area is considered to have air quality as good as or better than the national ambient air quality standards as defined in the CAA. These standards monitor for six common air pollutants; carbon monoxide (CO), nitrogen dioxide (NO<sub>2</sub>), ground-level ozone (O<sub>3</sub>), particulate matter (PM), sulfur dioxide (SO<sub>2</sub>), and lead (Pb). These pollutants may cause harm and negative effects to human and environmental health, in certain concentrations. The EPA regulates these pollutants and gives official designation for areas throughout the nation as either meeting (i.e. “in attainment”) or not meeting (i.e. “nonattainment”) these regulatory standards.

At the state level, the Division of Air Pollution Control, which is housed within Tennessee Department of Environment and Conservation (TDEC), is responsible to ensure that Proposed Actions adhere to applicable statutory and regulatory requirements. In addition, this agency also monitors the state’s existing air quality, enforces compliance with air quality standards, and participates in programs that are implemented to improve Tennessee’s air quality.

### **5.1.2 Significant Impact Threshold**

Identified in FAA Order 1050.1F, the significance threshold for air quality is defined as *“The action would cause pollutant concentrations to exceed one or more of the National Ambient Air Quality Standards (NAAQS), as established by the Environmental Protection Agency under the Clean Air Act, for any of the time periods analyzed, or to increase the frequency or severity of any such existing violations.”*

### **5.1.3 Analysis of Air Quality**

The proposed action would occur in Roane County, which is used as the ROI for the air quality analysis. A review of EPA’s Green Book – Current Nonattainment Counties for All Criteria Pollutants, indicates that only Sullivan County, TN is in nonattainment for Sulfur Dioxide. Anderson and Knox counties were at one time nonattainment areas for Ozone and Particulate Matter–2.5 (PM-2.5) and Roane County was a nonattainment area for PM-2.5. These counties have been redesignated (Roane County as recently as 2017) to maintenance areas and classified as marginal (3 years to attain) to moderate (6 years to attain) for pollutants.

FAA guidance requires both the No-Action alternative and the Preferred Alternative to be analyzed for the possibility of exceeding significant impact thresholds. The following paragraphs summarize the analysis for both alternatives.

**5.1.4 Environmental Consequences of the No-Action Alternative**

The No-Action alternative would result in no construction of the proposed airport, leaving air quality unaffected from the existing condition. As such, the No-Action alternative would not result in direct, indirect, or cumulative impacts to air quality. No further analysis would be necessary and mitigation efforts would not be required.

**5.1.5 Environmental Consequences of the Preferred Alternative**

Emissions that would be generated from a new airport were compared with Roane County emissions (along with adjacent Anderson and Knox Counties, which are a part of the Knoxville metro area), obtained from EPA’s 2017 National Emissions Inventory (NEI). The latest available NEI data for Roane, Anderson, and Knox Counties are presented in Table 5-2 and represent the most recent baseline criteria pollutant Emissions inventory (CY 2017 in tons/year).<sup>2</sup>

**Table 5-2 Baseline Criteria Pollutant Emissions Inventory (CY 2017 in tons/year)**

County	NOx	CO	SO2	PM-10	PM-2.5	VOCs
Anderson	1,419	529	591	213	178	142
Knox	1,657	1,984	158	432	235	626
Roane	1,781	702	2,000	578	515	89

CO = carbon monoxide; CY = calendar year; NOx = nitrogen oxides; PM10 and PM2.5 = particulate matter with a diameter of less than or equal to 10 microns and 2.5 microns, respectively; SO2 = sulfur dioxide; VOC = volatile organic compound.

Maintenance areas are those that were previously classified as nonattainment but where air pollution concentrations have been successfully reduced to levels below the standard. Maintenance areas are subject to special maintenance plans to ensure compliance with the NAAQS.

Hazardous air pollutants (HAPs) are chemicals that are known or suspected of causing cancer or other serious health effects. Unlike the criteria pollutants, HAPs currently do not have national ambient standards. Some volatile organic compounds (VOCs) are classified as HAPs. VOCs are also ozone precursors and include any organic compound involved in atmospheric photochemical reactions, except those designated by an EPA administrator as having negligible photochemical reactivity. HAPs are not covered by the NAAQS but may present a threat of adverse human health or environmental effects under certain conditions.

---

<sup>2</sup> Source: EPA Dashboard for National Point Source Emissions:  
[https://edap.epa.gov/public/extensions/nei\\_report\\_2017/dashboard.html#point-db](https://edap.epa.gov/public/extensions/nei_report_2017/dashboard.html#point-db) (accessed 6/9/21).

Additionally, a review of the Tennessee Division of Air Pollution Control (TDAPC) website was made. The TDAPC directly serves 91 counties within the state and oversees and assists in the actions of Davidson, Hamilton, Knox, and Shelby counties, which have their own local air pollution control programs. The TDAPC identified no established or modifications to the State Implementation Plan (SIP) for Anderson, Knox, or Roane counties.

At the request of FAA's Memphis District Office, an Aircraft Emissions Report for the Ultimate Condition Forecast (Year 2040) using FAA's Aviation Environmental Design Tool (AEDT) was generated. These are the highest aircraft operations in the forecast period. As Table 5-3 indicates, a *de minimis* level of emissions for each of the listed pollutants was generated annually by the proposed Oak Ridge Airport aircraft operations. Given the negligible levels of emissions and the fact that the project is within a designated maintenance area, the proposed action will not have a significant impact on Air Quality.

The preferred access road from TN 58 (Oak Ridge Parkway) will handle automobile and construction traffic entering and exiting the airfield, both during construction and into normal daily operations following completion of the airport's construction. Using the 2040 forecast, the proposed Oak Ridge Airport will on-average contribute approximately 64 vehicle operations to and from the airport per day. Thus, an access road from TN 58 to the proposed airport would have approximately 64 automobile operations per day.

The Oak Ridge Turnpike had an AADT (average annual daily traffic) count of 14,944 in 2020, with a DHV-30 (design hour volume 30<sup>th</sup> highest of the year) of 1,617. By comparison, the proposed airport road traffic represents 0.4 percent of the daily traffic on TN 58. This level of traffic produces insignificant emissions, relative to the existing overall traffic totals. Blair Road, which may be used for some construction activities had an AADT of 3,358 in 2020, with a DHV-30 of 381.

During airport operation, emissions from ground support equipment (e.g., fuel truck), service/maintenance vehicles, and privately owned vehicles (employees and pilots) would be negligible. Based on air emissions modeling and analysis, the proposed action would not result in any substantial increase in air emissions. No applicable general conformity *de minimis* thresholds would be exceeded.

General conformity applies only to nonattainment and maintenance areas. If the emissions from a federal action proposed in a nonattainment area exceed annual *de minimis* thresholds identified in the rule, a formal conformity determination is required for that action. The thresholds are more restrictive as the severity of the nonattainment status of the region increases. The emissions generated by aircraft and automobiles entering and departing the proposed Oak Ridge Airport were below the *de minimis* air quality levels required by the TDAPC for a new stationary source. Consequently, no significant impacts from automobile traffic along the new airport access road is anticipated.

All of the emissions generated by a proposed Oak Ridge Airport were well below the *de minimis* air quality levels required by the TDAPC for a new stationary source. Additionally, the project design and construction will adhere to current standards and good engineering practices. As a result, the construction and operation of a new Oak Ridge Airport would not generate a significant air quality impact.

## **5.2 Biological Resources**

Biological Resources are described by the 2020 Desk Reference as “being valued for their intrinsic, aesthetic, economic, and recreational qualities.” This impact category includes an assessment of presence or use of the proposed study by terrestrial and aquatic plants and animal species. Such species include state or federally-listed threatened and endangered species, species of special concern, migratory birds, game species, and environmentally sensitive and/or critical habitats. Any potential impacts to biological resources that may result from changes to visual effects or negative effects of light emissions should also be discussed in this section.

### **5.2.1 Regulatory Setting**

The FAA 2020 Desk Reference identifies the various statutes, Executive Orders, and other guidance federally adopted in order to protect biological resources. Though many regulations are listed, the ones most applicable to the Proposed Action for this EA include the Bald and Golden Eagle Protection Act (BGEPA), the Endangered Species Act (ESA), and the Migratory Bird Treaty Act (MBTA). The United States Fish and Wildlife Service (USFWS) holds regulatory oversight of these programs on the federal level. In addition to federal laws, state regulations must also be considered. The Tennessee Wildlife Resources Agency (TWRA) and TDEC maintain and enforce state regulations for protected species.

### **5.2.2 Significant Impact Threshold**

Based on guidance outlined in FAA Order 1050.1F, a significant impact would occur if the United States Fish and Wildlife Service (USFWS) determine that the Proposed Action would be likely to jeopardize the existence of federally-listed threatened or endangered species or would result in adverse impacts to federally-designated critical habitat. The FAA has not established a significance threshold for non-listed species. In addition, Exhibit 4-1 of FAA Order 1050.1F provides other factors to consider in evaluating potential for impacts to biotic resources. These include, but are not limited to, extirpation of an unlisted species from a large area, adverse impacts to special status species or their habitats, substantial loss or degradation of native species or their habitats, or adverse impacts to reproductive success ability to sustain viable species populations.

### **5.2.3 Analysis of Biological Resources**

GMC contracted with S&ME to conduct a biological assessment of the proposed airport site. The purpose of the assessment was to identify and document the biotic communities located within the study area. Special emphasis was placed on any Federally or state-listed threatened or endangered species, or species proposed for listing, that may be present in the study area.

S&ME reviewed the USFWS online database (i.e., the Information, Planning, and Conservation (IPaC) decision support system, attached) and the TDNA rare species by quadrangle database to determine if T&E species, designated critical habitat, proposed critical habitat, Migratory Birds of Conservation Concern (MBCC), or other natural resources of concern may be affected by development activities at the site. Several federally- and state-protected species are listed within the vicinity of the project

site; however, the site is not located within designated critical habitat for any species. A table of the federal and state species protected species is provided in S&ME's Threatened and Endangered Species Report provided in Appendix A.

S&ME personnel visited the site in late March/early April 2021 to locate and delineate jurisdictional waters and potential T&E species concerns within the project area. The primary site-development area is bordered by Burchfield Road and the Poplar Creek Embayment to the southwest, Oak Ridge Turnpike to the south/southeast, forest to the north/northeast/northwest, and the K-25 Site footprint to the west. The surrounding area is primarily forest on all sides except for the west, which consists of the K-25 Site that is currently in the demolition, cleanup, and redevelopment stages. Eight small polygonal areas are also located to the southwest and northeast of the primary airport site. These areas will require tree clearing within the proposed runway protection zone; these areas are surrounded by mature forest.

Due to historical use of the site, the southwest third of the site is comprised of buildings, pavement, roads, utilities, stormwater ponds, and lawn. The remainder of the site consists of mature and successional forest transected by roads, cleared powerline easements, and church/cemetery grounds. Typical trees within the forest include various red and white oaks (*Quercus* sp.), maples (*Acer* sp.), hackberry (*Celtis occidentalis*), loblolly pine (*Pinus taeda*), hickory (*Carya* sp.), American beech (*Fagus grandifolia*), sweetgum (*Liquidambar styraciflua*), eastern red cedar (*Juniperus virginiana*), black cherry (*Prunus serotina*), redbud (*Cercis canadensis*), dogwood (*Cornus florida*), and elms (*Ulmus* sp.). Trees along the ponds and wetlands include sycamore (*Platanus occidentalis*), black willow (*Salix nigra*), and bald cypress (*Taxodium distichum*). Understory shrubs include tree saplings of the previously-mentioned species, privet (*Ligustrum sinense*), honeysuckle (*Lonicera maackii*), fire cherry (*Prunus pensylvanica*), spicebush (*Lindera benzoin*), coralberry (*Symphoricarpos orbiculatus*), and silky dogwood (*Cornus amomum*).

Multiple habitat types are located within the project area, including mature and successional deciduous and pine forest, grassland, riparian areas, wetlands, and ponds. Poplar Creek borders the site to the west but will not be impacted by the proposed project. The streams that may be impacted by the project consist of small drainages that are mostly intermittent, with a few low-flowing perennial streams also present. The water resources located within the study area are described in more detail in Section 5.12.

The findings of the field habitat survey documented potential suitable habitat for 28 of the 60 listed species may be present on site. Table 5-4 below provides a list of these species and the full detailed review of each specie and their habitat is included in the Threatened and Endangered Species Report provided in Appendix A.

**Table 5-4 Species with Potential Suitable Habitat within the Study Area**

<b>Common Name</b>	<b>Scientific Name</b>	<b>Fed/State listed?</b>
<b>Indiana bat</b>	<b>Myotis sodalis</b>	<b>Federal Endangered</b>
<b>Northern long-eared bat</b>	<b>Myotis septentrionalis</b>	<b>Federal Endangered</b>
Southern bog lemming	Synaptomys cooperi	State Deemed in Need of Management
Tangerine darter	Percina aurantiaca	State Deemed in Need of Management
Tennessee dace	Chrosomus tennesseensis	State Deemed in Need of Management
Flame chub	Hemitremia flammea	State Deemed in Need of Management
Valley flame crayfish	Cambarus	State Endangered
Four-toed salamander	Hemidactylium scutatum	State Deemed in Need of Management
Green salamander	Aneides aeneus	Rare, Not State Listed
<b>White fringeless orchid</b>	<b>Platanthera integrilabia</b>	<b>Federal Threatened</b>
Northern bush- honeysuckle	Diervilla lonicera	State Threatened
Schreber's aster	Eurybia schreberi	State Special Concern
Mountain honeysuckle	Lonicera dioica	State Special Concern
Tall larkspur	Delphinium exaltatum	State Endangered
American ginseng	Panax quinquefolius	State Listed Special Concern
Butternut	Juglans cinerea	State Threatened
Nuttall's waterweed	Elodea nuttallii	State Special Concern
River bulrush	Bolboschoenus fluviatilis	State Special Concern
Mountain witch-alder	Fothergilla major	State Threatened
Tuberclad rein-orchid	Platanthera flava var. herbiola	State Threatened
Heller's catfoot	Pseudognaphalium helleri	State Special Concern
Branching whitlow-grass	Draba ramosissima	State Special Concern
Shining ladies' tresses	Spiranthes lucida	State Threatened
Northern pinesnake	Pituophis melanoleucus melanoleucus	State Threatened
Eastern slender glass lizard	Ophisaurus attenuates longicaudus	State Deemed in Need of Management
Bachman's sparrow	Peucaea aestivalis	State Endangered
Cerulean warbler	Setophaga cerulea	State Deemed in Need of Management

#### **5.2.4 Environmental Consequences of the No-Action Alternative**

The No-Action alternative would result in no construction of the proposed airport, leaving biological resources unaffected from the existing condition. As such, the No-Action alternative would not result in direct, indirect, or cumulative impacts to biological resources. No further analysis would be necessary and mitigation efforts would not be required.

#### **5.2.5 Environmental Consequences of the Preferred Action**

The conclusions of S&ME's study of the project area identified potential appropriate habitat for multiple state and federally listed species and requested comments from the USFWS, TWRA, and TDNA regarding the listed species and the potential impacts due to development of the property. Both the TWRA and the TDNA indicated that their records did indicate the presence of some of these species in the vicinity of the proposed project area, but not within the project area. The USFWS acknowledged that the project area does contain potential suitable habitat for White fringeless orchid (*Platanthera integrilabia*), Indiana bat (*Myotis sodalist*), and the Northern long-eared bat (*Myotis septentrionalis*) and stated that the project proponent should address potential impacts to these species.

#### **5.2.6 Mitigation**

Based on the responses received from each of the agencies contacted, further investigation and surveys for White fringeless orchid (*Platanthera integrilabia*) will be conducted prior to land disturbance activities. It is anticipated that all tree clearing would be conducted in the winter to avoid potentially impacting the Indiana bat (*Myotis sodalist*), and the Northern long-eared bat (*Myotis septentrionalis*). However, if tree clearing is not able to be conducted in the winter, surveys for these species will be conducted prior to any tree clearing or land disturbance. The results of the surveys will be provided to each agency for their review and concurrence with the findings prior to beginning construction of the proposed action.

### **5.3 Climate**

Climate change, according to the U.S. EPA, "refers to any significant change in the measures of climate lasting for an extended period of time." This change is a result of greenhouse gases (GHG), which include pollutants such as carbon dioxide (CO<sub>2</sub>), methane, nitrous oxide, and refrigerants that trap heat and radiation in the earth's atmosphere. The burning of fossil fuels also contributes significantly to GHG emissions. Per FAA data, aircraft engine emissions are roughly composed of about 70% CO<sub>2</sub>, making it the main GHG pollutant produced by the combustion of aviation (fossil) fuel. The Intergovernmental Panel on Climate Change (IPCC) reported that international and domestic aviation accounts for approximately 4.1% of global transportation GHG emissions. The EPA estimates that, in 2013, commercial aviation is responsible for more than 6.5% of CO<sub>2</sub> emissions across the nation (FAA Desk Reference, 2020). Therefore, minimizing GHG emissions, as well as identifying potential future impacts a Proposed Action may potentially cause to climatic conditions, is necessary.

### **5.3.1 Regulatory Setting**

On January 11, 2021, EPA adopted the first-ever rule in the United States regulating GHG emission standards for certain classes of airplanes. These proposed requirements are equivalent to existing GHG emission guidelines set by the International Civil Aviation Organization (ICAO) and are applicable to aircraft in production (on or after January 1, 2028) and new aircraft designs. The standards only apply to “subsonic jet airplanes with maximum takeoff mass (MTOM) greater than 5,700 kilograms and subsonic propeller-driven airplanes (e.g., turboprops) with a MTOM greater than 8,618 kilograms” per Federal Register Volume 86, No. 6. Examples of such aircraft include commercial jets like the Boeing 787, business jets such as the Cessna Citation, and larger civil turboprops like the Bombardier Dash 8.

### **5.3.2 Significant Impact Threshold**

Currently there are no significance thresholds for aviation GHG emissions, nor are there accepted methods of determining the significance applicable to aviation projects.

### **5.3.3 Analysis of Climate**

The affected environment for assessing the proposed action and alternatives potential impact on climate, as with air quality, includes the area within the primary study area and the area immediately adjacent to the proposed project area. Greenhouse gases (GHGs) are naturally occurring and also include man-made gases that trap heat in the earth's atmosphere. The FAA considers CO<sub>2</sub> emissions from aircraft to be the primary GHG of concern. The potential increase in airport operations due to the proposed action and alternative could contribute to an increase in GHG emissions compared to the no action alternative.

### **5.3.4 Environmental Consequences of the No-Action Alternative**

The No-Action alternative would result in no construction of the new airport. This would result in GHG emissions and associated air quality unaffected from the existing condition. As such, the No-Action alternative would not result in direct, indirect, or cumulative impacts to climate. No further analysis would be necessary and mitigation efforts would not be required.

### **5.3.5 Environmental Consequences of the Preferred Alternative**

It is anticipated that the proposed project would have a minimal overall impact on GHGs and climate change. The CEQ has noted “it is not currently useful for the NEPA analysis to attempt to link specific climatological changes, or the environmental impacts thereof, to the particular project or emissions, as such direct linkage is difficult to isolate and to understand.” There are no significance thresholds for aviation GHG emissions since there are currently no accepted methods of determining significance applicable to aviation projects given the small percentage of emissions they contribute. Therefore, no significant direct, indirect, or cumulative effects are anticipated due to the implementation of the proposed action.

**5.4 Section 4(f)**

Section 4(f) states that, subject to exceptions for de minimis impacts, the Secretary of Transportation (Secretary) may approve a transportation program or project requiring the use of publicly-owned land of a park, recreational area, or wildlife and waterfowl refuge of national, state, or local significance or land of a historic site of national, state, or local significance as determined by the official having jurisdiction over those resources only if: (1) there is no prudent and feasible alternative that would avoid using those resources, and (2) the program or project includes all possible planning to minimize harm resulting from the use.

**5.4.1 Regulatory Setting**

Table 5-5 lists the primary statutes and regulations related to Section 4(f) impacts.

**Table 5-5 Statues and Regulations Related to Section 4(f) Properties**

Statute	Location in U.S. Code or Public Citation	Implementing Regulation	Oversight Agency <sup>a</sup>	Summary <sup>a</sup>
Land and Water Conservation Fund Act of 1965	16 U.S.C. §§ 4601-4 et seq.	36 CFR part 59 et seq.	DOI	Section 6(f) provides funds for buying or developing public use recreational lands through grants to local and state governments. Section 6(f)(3) prevents conversion of lands purchased or developed with Land and Water Conservation Fund Act funds to non-recreation uses, unless the Secretary of the DOI, through the NPS, approves the conversion.
U.S. Department of Transportation Act – Section 4(f)	49 U.S.C. § 303	23 CFR part 774 et seq. <sup>3</sup>	DOT	Protects certain properties from use for DOT projects unless the relevant DOT agency (e.g., the FAA) determines there is no feasible and prudent alternative and a project includes all possible planning to minimize harm.
Safe, Accountable, Flexible, Efficient Transportation Equity	49 U.S.C. § 303	23 CFR part 774 et seq.	DOT	Amended Section 4(f) to simplify the process and approval of projects that have

<sup>3</sup> These regulations were issued by the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA), and are not binding on the FAA. However, they may be used as guidance to the extent relevant to aviation.

Act: A Legacy for Users (SAFETEA-LU) – Section 6009				only de minimis impacts on 4(f) properties.
U.S. Department of Defense Reauthorization	P.L. 105-85, Div. A, Title X, Section 1079, Nov. 18, 1997, 111 Stat. 1916	Not applicable	DOD	Exempts military flight operations and designation of airspace for such operations from Section 4(f).

<sup>a</sup> CFR = Code of Federal Regulations; DOD = U.S. Department of Defense; DOI = U.S. Department of the Interior; DOT = U.S. Department of Transportation; NPS = National Park Service; U.S.C. = United States Code.

Procedural requirements for complying with Section 4(f) are set forth in DOT Order 5610.1C. The FAA also uses Federal Highway Administration/Federal Transit Administration (FHWA/FTA) regulations in 23 CFR part 774 (73 Federal Register 13368 [March 12, 2008] and 73 Federal Register 31609 [June 3, 2008]) and FHWA guidance (e.g., Section 4(f) Policy Paper,<sup>4</sup> 77 Federal Register 42802 [July 20, 2012]). These requirements are not binding on the FAA; however, the FAA may use them as guidance to the extent relevant to aviation projects. See the FHWA website for further information at:

<https://www.environment.fhwa.dot.gov/legislation/section4f.aspx>.

#### **5.4.2 Significant Impact Threshold**

Based on guidance outlined in FAA Order 1050.1F, a significant impact would occur if the action involves more than a minimal physical use of a Section 4(f) resource or constitutes a “constructive use” based on an FAA determination that the aviation project would substantially impair the Section 4(f) resource. Resources that are protected by Section 4(f) are publicly owned land from a public park, recreation area, or wildlife and waterfowl refuge of national, state, or local significance; and publicly or privately owned land from an historic site of national, state, or local significance. Substantial impairment occurs when the activities, features, or attributes of the resource that contribute to its significance or enjoyment are substantially diminished.

#### **5.4.3 Analysis of Section 4(f) Properties**

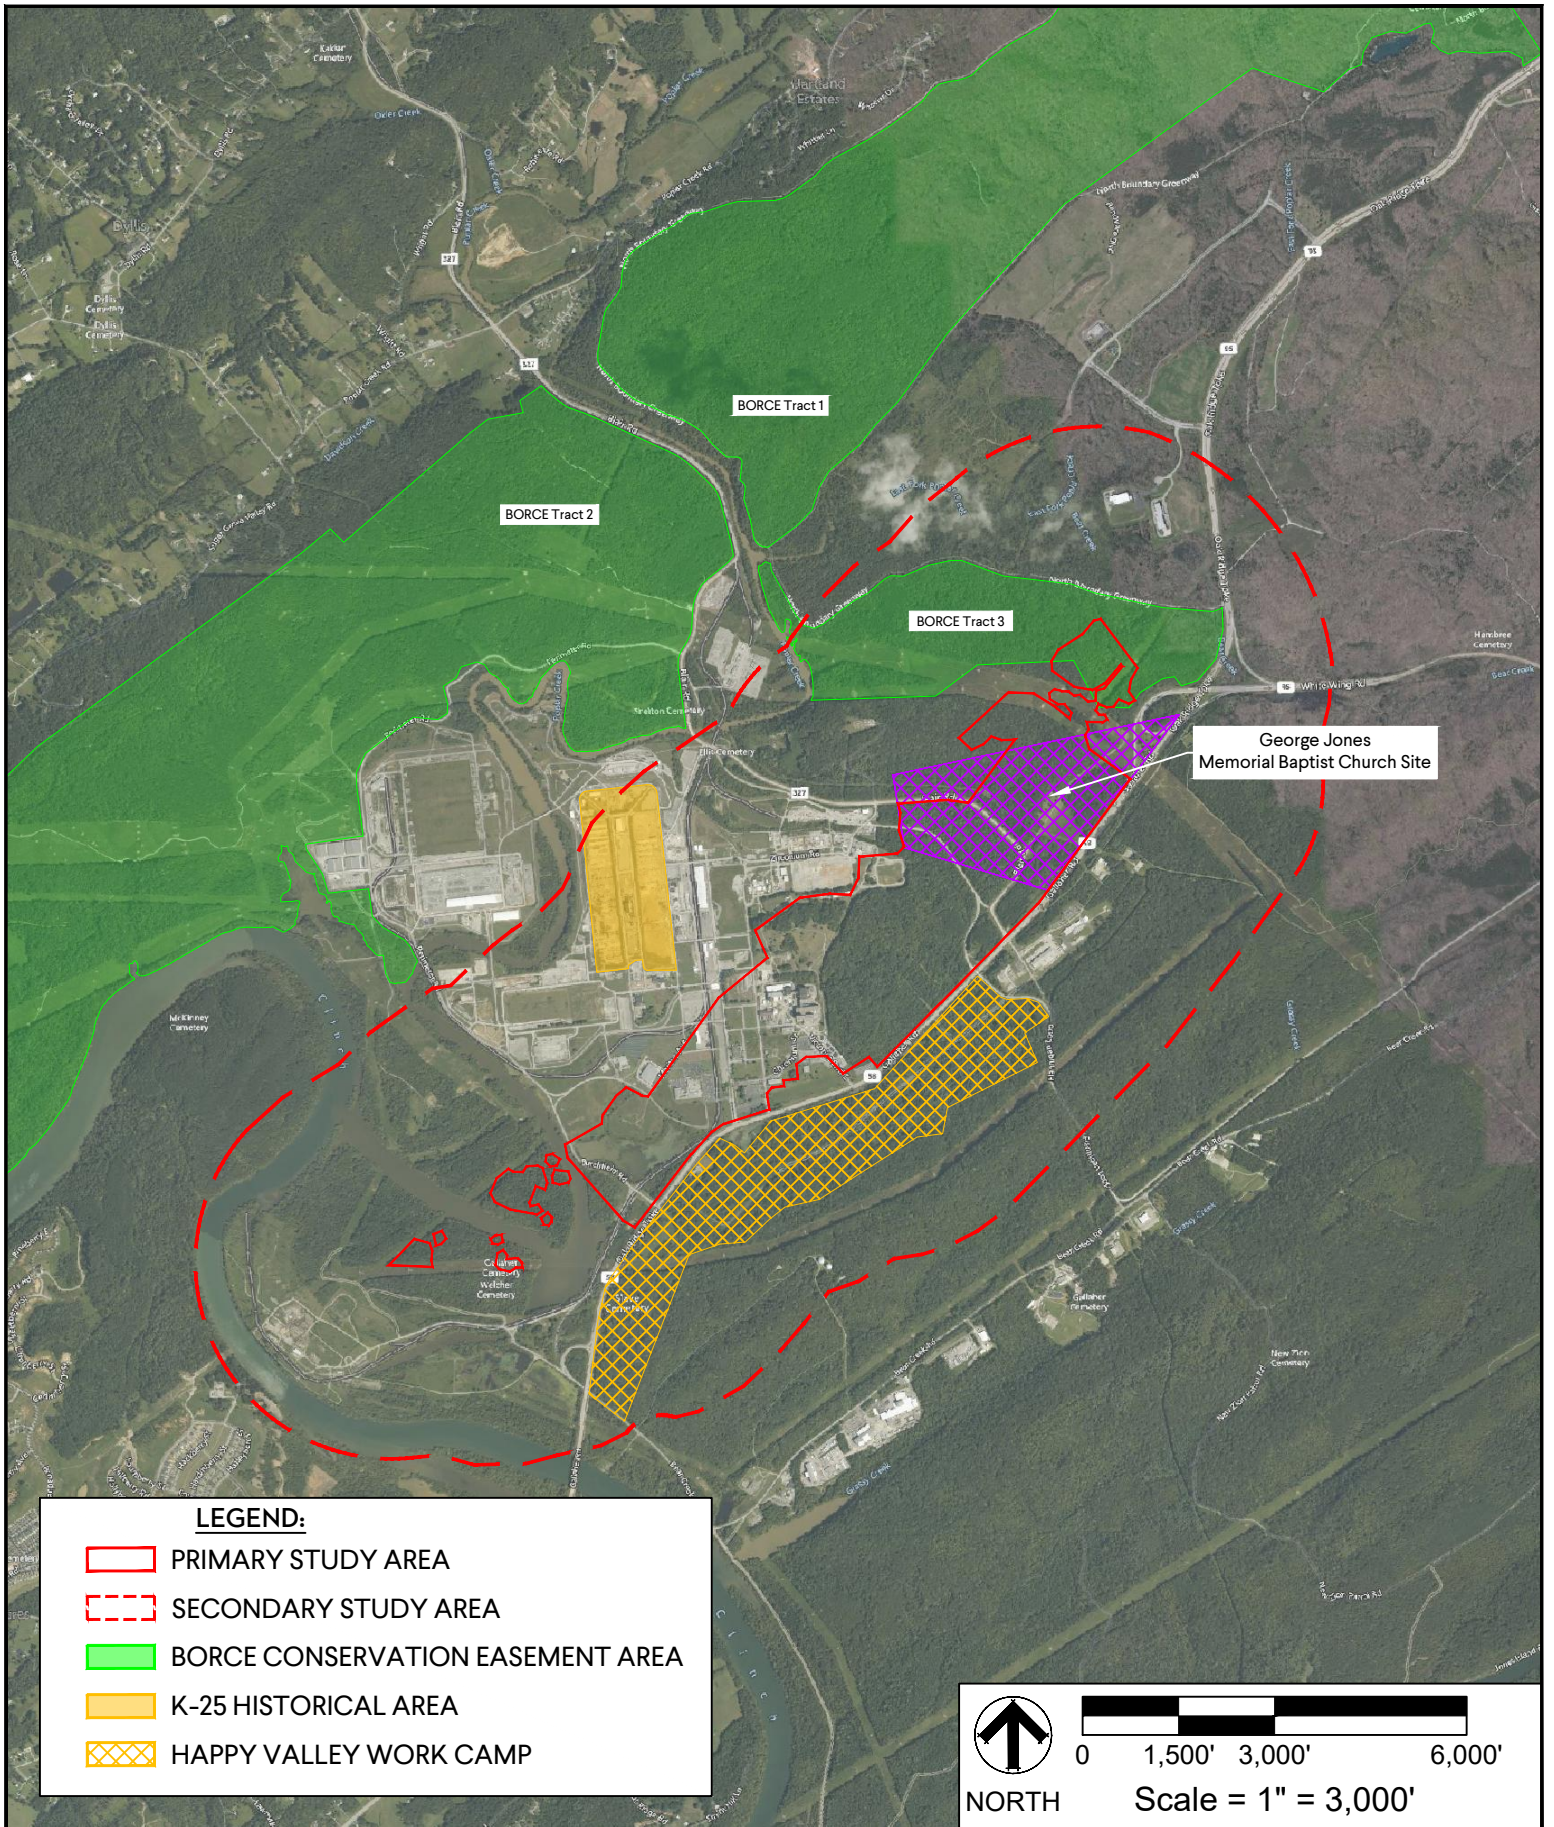

There are two (2) Section 4(f) resources located within the primary study area and two (2) additional Section 4(f) resources located within the secondary study area. These resources include areas within a National Park, resources listed or eligible for listing on the National Register of Historic Places (NRHP), and areas in a conservation easement. These resources and their location within the PSA and/or distance from the PSA are identified in Table 5-6 below and Figure 5-1 identifies the location of these resources in relation to the primary and secondary study areas.

---

<sup>4</sup> <https://www.environment.fhwa.dot.gov/legislation/section4f/4fpolicy.pdf>

**Table 5-6 Section 4(f) Resources**

<b>Resource</b>	<b>Resource Type</b>	<b>Location and/or Distance from Primary Study Area</b>
K-25 Slab	Part of the Manhattan National Historical Park	790-feet north of the PSA
Happy Valley Worker Camp	NRHP eligible	100-feet south of the PSA on the south side of US 58
George Jones Memorial Baptist Church	NRHP-listed	Northeast corner of the PSA
BORCE	Conservation easement	Portions of Tract 3 are within the Primary Study Area

**LEGEND:**

GMCNETWORK.COM

#### **5.4.4 Environmental Consequences of the No-Action Alternative**

The No-Action alternative would result in no construction of the new airport. As such, the No-Action alternative would not result in direct, indirect, or cumulative impacts to Section 4(f) resources. Due to the removal of trees between the George Jones Baptist Church and US 58, the church and adjoining cemetery would continue to be impacted by the traffic noise and visual impact of US 58. No further analysis would be necessary and mitigation efforts would not be required.

#### **5.4.5 Environmental Consequences of the Preferred Alternative**

Although there are Section 4(f) resources located within the primary and secondary study area, the proposed action would not physically use any of these resources. The proposed project was also assessed for its potential constructive use of a Section 4(f) property such as impacts due to an increase in noise and potential visual effects. The noise analysis conducted for the proposed action, which is described in detail in Section 5.9, documents that the average annual noise generated by the proposed airport's construction and operation are below those levels emitted by the traffic on US 58; therefore, there would be no significant increase in noise levels in the vicinity of the airport. An analysis of the visual effects of these resources, described in more detail in Section 5.11 also documents that there would be no visual effect to any of these resources. Therefore, the proposed action would not substantially impair or have a negative effect or contribute to a cumulative impact on Section 4(f) resources.

### **5.5 Hazardous Materials, Solid Waste, and Pollution Prevention**

This chapter includes an assessment of any hazardous material(s) that might be generated by a Proposed Action, used during the construction or operation of a Proposed Action, the potential to encounter existing hazardous materials at a contaminated site, and/or the potential to interfere with any ongoing remediation of existing contaminated sites. With respect to solid waste and pollution prevention, the analysis should identify any anticipated refuse materials that may be discarded on the project site and the ability to avoid, prevent, or reduce pollutant discharges or emissions.

#### **5.5.1 Regulatory Setting**

Chapter 7 of the 2020 Desk Reference identifies the EPA as the federal agency tasked with the compliance and enforcement of regulations involving hazardous substances. The following federal statutes (and state equivalents, if applicable) are those that address hazardous materials, solid waste, and pollution prevention as a part of the NEPA process and are applicable to the activities of the Proposed Action.

##### **5.5.1a Comprehensive Environmental Response, Compensation, and Liability Act**

Referred to as "CERCLA", this Act is directed by the EPA and institutes financial liability for those responsible in hazardous substance releases. In situations where the responsible entity cannot be identified, a trust was established that provides such finances for cleanup. Additionally, this Act established the National Priority List 5.9 (NPL), which is a listing of sites with known releases or threatened releases of hazardous substances in the United States and its territories. The NPL is

helpful in assessing sites that may require further investigation. The current NPL can be viewed and researched by state at <https://www.epa.gov/superfund/national-priorities-list-npl-sites-state>. Additionally, the EPA hosts another interactive website, [www.epa.gov/cleanups](http://www.epa.gov/cleanups), that provides information on various types of federal programs responsible for the identification and cleanup of land throughout the United States.

#### 5.5.1b Pollution Prevention Act

This act is regulated by both the Council of Environmental Quality (CEQ) and the EPA and is intended to require pollution prevention and reduction control of source pollutants so that wastes (hazardous and non-hazardous) would have less of an impact on the environment.

#### 5.5.1c Resource Conservation and Recovery Act

The Resource Conservation and Recovery Act (RCRA) established guidelines for the generation, storage, treatment, and disposal of hazardous waste and non-hazardous solid waste in the United States. Program goals are the protection of human health and the environment, the conservation of energy and natural resources, the reduction of waste volumes and the sustainable, responsible management of waste products. Three different programs within the RCRA are established for the oversight of separate waste types identified as 1) Hazardous wastes; 2) Non-hazardous wastes; and 3) Underground storage tanks (UST). Of these programs, the hazardous wastes and non-hazardous waste programs are most relevant to FAA actions, per the 2020 Desk Reference.

#### 5.5.1d Executive Order 12088, Federal Compliance with Pollution Control Standards

This Executive Order directs federal agencies to comply with applicable pollution control standards and to consult with the EPA, state, and local agencies concerning the best management practices (BMP) available for the prevention, control, and abatement of environmental pollution. To meet the directives of this Order, NEPA documents should identify how the FAA is complying with the applicable pollution control standards.

#### 5.5.1e CEQ Memorandum on Pollution Prevention and the National Environmental Policy Act

This Memorandum encourages early efforts by federal agencies to consider opportunities for pollution prevention. The 2020 Desk Reference indicates that “in accordance with this guidance, the FAA should, to the extent practicable, include pollution prevention considerations in the proposed action and its alternative(s); address pollution prevention in the environmental consequences section; and disclose in the Record of Decision (ROD) the extent to which pollution prevention was considered.”

#### 5.5.1f FAA Orders and Advisory Circulars

The 2020 Desk Reference lists several FAA Orders and Advisory Circulars (AC) to be consulted as part of the NEPA process. Those applicable to the Proposed Action of this EA include:

- Order 1050.10C, Prevention, Control and Abatement of Environmental Pollution at FAA Facilities [http://www.faa.gov/documentLibrary/media/Order/ND/1050\\_10c.pdf](http://www.faa.gov/documentLibrary/media/Order/ND/1050_10c.pdf)
- AC 150/5320-15A, Management of Airport Industrial Waste [http://www.faa.gov/documentLibrary/media/advisory\\_circular/150-5320-15A/150\\_5320\\_15a.pdf](http://www.faa.gov/documentLibrary/media/advisory_circular/150-5320-15A/150_5320_15a.pdf)

#### 5.6.1g State Regulations

Within the State of Tennessee, TDEC holds primary oversight for the regulation, compliance, and enforcement of policies regarding hazardous waste, solid wastes, and pollution prevention. There are numerous state laws pertaining to this impact category and many different Division offices within the Department are responsible for components of each. Successful compliance with applicable state law should be achieved by coordination with the appropriate TDEC Division offices.

### **5.5.2 Significant Impact Thresholds**

A significance threshold for hazardous materials, solid waste or pollution prevention has not been established yet by the FAA. However, factors to consider regarding this category include a consideration for whether the Proposed Action would violate any applicable federal, state, local, or tribal laws; or create an adverse impact to human health and the environment; or result in a considerable amount of hazardous or non-hazardous waste that may exceed local capacity. The site for the proposed activities should also be investigated to identify if it holds a record for contamination, such as a site listed on the EPA NPL or mapped as a site undergoing cleanup as part of one or more established federal programs. Additionally, the Proposed Action should demonstrate compliance with any applicable FAA Orders or ACs pertaining to hazardous materials, solid waste or pollution prevention.

### **5.5.3 Analysis of Hazardous Materials, Solid Waste, and Pollution Prevention**

In the early 1940s, the United States Department of Energy (DOE) constructed three facilities on the approximately 37,000-acre Oak Ridge Reservation in Oak Ridge, Tennessee: Oak Ridge National Laboratory, Oak Ridge Y-12 Plant, and East Tennessee Technology Park (area and facilities together comprise the Site). Activities at these facilities have resulted in the release of hazardous substances (e.g., polychlorinated biphenyls and mercury) and radioactive compounds, leading to the contamination of natural resources both at the Site and in the surrounding environment.

GMC contracted with S&ME to conduct a Phase I Environmental Site Assessment (ESA) of the proposed airport site. The purpose of the assessment was to identify any potential Recognized Environmental Conditions (RECs) within the PSA. Based on the results of the Phase I ESA, S&ME identified RECs in connection with the subject property. Based upon historical records, regulatory databases and records, and on-site observations, a Vapor Encroachment Condition (VEC) exists. In addition, the PSA currently contains several groundwater monitoring wells that are monitored by the Department of Energy (DOE) as part of the ongoing investigations and remediation efforts to address the contamination caused by the historical use of the site.

#### **5.5.4 Environmental Consequences of the No-Action Alternative**

The No-Action alternative would result in no construction of the proposed airport leaving the site unchanged from the existing condition. As such, the No-Action alternative would not generate hazardous waste, solid waste or result in pollution discharges beyond existing conditions. No significant direct, indirect, or cumulative impacts would result and no further analysis would be necessary and mitigation efforts would not be required.

#### **5.5.5 Environmental Consequences of the Preferred Alternative**

The majority of property being used for the proposed Oak Ridge Airport Site is within the DOE's ETTP and will be transferred to the City of Oak Ridge either directly from the DOE or through CROET (the entity tasked with the reindustrialization of the ETTP site). Prior to any sale or transfer, the DOE evaluates the property and must remediate the property to an environmentally clean condition. All of the property being transferred to the COR from the DOE has undergone this process and is environmentally clean of hazardous waste. Additionally, the preferred alternative would remove three existing buildings within the proposed airport footprint: Bldg. 1007, Bldg. 1000 and Bldg.1225. All three of the buildings underwent Phase 1 evaluations for hazardous materials. The report is included in Appendix B for reference. All hazardous materials will be removed from the buildings prior to their demolition and taken to a designated landfill maintained by the DOE for these materials.

During construction, the use of materials classified as hazardous or regulated would consist primarily of fuels and other petroleum-based substances. The construction contractor(s) would be required to store these materials in dedicated staging areas and implement appropriate federal and state BMPs in order to reduce the potential for impacts associated with the handling and use of these materials.

Solid wastes associated with construction of the proposed action and alternative are expected to be comprised of waste materials typical of earthwork and paving projects. The volume of solid waste is expected to be minor during construction as most of the earthwork would involve moving dirt from one area to another within the study area. Construction waste not diverted, recycled, or re-used would be transported to and disposed of in local permitted construction/demolition facilities or in accordance with applicable state and local requirements. Therefore, no significant construction-related solid waste impacts would occur.

In order to address the previously documented contamination within the PSA, the DOE has agreed to drain the pond on the west end of the PSA, remove the existing weir and fish, and fill the pond with appropriate fill material. The filling of the pond is being completed under a CERCLA action of the DOE. The DOE is responsible for all environmental mitigation resulting from this action. In addition, the existing groundwater monitoring wells within the proposed airport boundary will be closed and capped; however, specific locations within the new airport boundary will be provided should continued groundwater monitoring be determined to be necessary and new monitors need to be installed. The COR will work with the DOE for appropriate locations that provide the needed information but do not impede the operation of the proposed airport.

Through the use of BMPs and adhering to federal, state, and local requirements, the Preferred Alternative is not anticipated to result in significant direct, indirect, or cumulative effects of hazardous materials, solid waste, or pollution impacts. No further analysis would be necessary and mitigation efforts would not be required. If hazardous materials are encountered and identified during construction activities, the proper regulatory agencies will be notified and appropriate actions will be taken by the Airport Sponsor and the contractor.

## **5.6 Historical, Architectural, Archeological, and Cultural Resources**

The 2020 Desk Reference defines resources within this environmental impact category as “past and present expressions of human culture and history in the physical environment, such as prehistoric and historic archaeological sites, structures, objects, districts, which are considered important to a culture or community. Historical, architectural, archeological, and cultural resources also include aspects of the physical environment, namely natural features and biota, which are a part of traditional ways of life and practices and are associated with community values and institutions.” Any potential impacts to historical, architectural, archeological, and/or cultural Resources that may result from changes in visual effects or negative effects of light emissions should also be discussed in this section, per the 2020 Desk Reference.

### **5.6.1 Regulatory Setting**

There are numerous regulations regarding resources within this impact category. The full listing of applicable federal policies is listed within Appendix B.7 of the FAA 2020 Desk Reference. The following federal statutes (and state equivalents, if applicable) are those that historical, architectural, archeological, and cultural resources as a part of the NEPA process and may be applicable to the activities of the Proposed Action.

#### **5.6.1a Historic Sites Act**

This national policy Act declares that historic sites, objects, properties of national significance, and other similar resources be preserved in public use. It allows the federal government authority to conduct historic surveys, secure and preserve historic data, and to acquire and preserve archeological and historic sites. The Act also establishes the National Historic Landmarks (NHL) program which designates “properties having exceptional value in commemorating or illustrating the history of the United States.”

#### **5.6.1b National Historic Preservation Act**

Under Section 106 of the National Historic Preservation Act of 1966 (NHPA), the FAA is required to consider effects to properties listed on the National Registry of Historic Places (NRHP) and coordinate with the appropriate State Historic Preservation Officer (SHPO) on all undertakings that have the potential to affect historic properties. Section 110(f) of the NHPA requires the FAA to evaluate impacts to National Historic Landmarks (NHLs). It should be noted that NEPA and NHPA are two separate statutes and each has a unique set of regulations and differing review processes. However, they require similar scoping and agency consultation.

### 5.6.1c State Regulations

The Tennessee Historical Commission (THC) acts as the SHPO for Tennessee. As such, the THC has specific responsibilities throughout the Section 106 review process, including offering consultation on the Area of Potential Effect (APE) for a proposed activity. This agency's mission is "to protect, preserve, interpret, maintain, and administer historic places; to encourage the inclusive diverse study of Tennessee's history for the benefit of future generations; to mark important locations, persons, and events in Tennessee history; to assist in worthy publication projects; to review, comment on, and identify projects that will potentially impact historic properties; to locate, identify, record, and nominate to the NRHP all properties which meet National Register criteria; and to implement other programs of the NHPA of 1966 as amended."

Sites within the state that have been placed on the "National Register" of Historic Places can be identified by using the THC online data viewer.<sup>5</sup> This tool is only useful in locating National Register sites and is not exhaustive of all known or unknown historical, architectural, archeological, and cultural resources.

### **5.6.2 Significant Impact Threshold**

A significance threshold for this environmental impact category has not been established yet by the FAA. However, FAA order 1050.F indicates that special consideration should be given in "situations in which the proposed action or alternative(s) would result in a finding of Adverse Effect through the Section 106 process. It should be noted that NHPA regulations within 36 CFR § 800.8(a) state that an adverse effect finding does not necessarily require an EIS under NEPA. This is because an Adverse Effect under Section 106 does not directly correlate to a significant effect by NEPA review. In such cases, the FAA will make the final determination on the level of impact under NEPA. The Section 106 consultation process and guidance from the Advisory Council on Historic Preservation and the SHPO may assist the FAA in this determination.

### **5.6.3 Analysis of Historical, Architectural, Archeological, and Cultural Resources**

The project area for Section 106 investigations is known as the Area of Potential Effects (APE). Per 36 CFR § 800.4(a), the APE is typically considered "...the geographic area or areas within which an undertaking may directly or indirectly cause alterations in the character or use of historic properties, if any such properties exist. The APE is influenced by the scale and nature of an undertaking and may be different for different kinds of effects caused by the undertaking." The 2020 Desk Reference also identifies other factors to consider when determining the APE. These include operational effects, such as increased noise, vibration, lighting, and increased traffic and ground-disturbing effects, such as site excavation, staging and construction areas. The limits of the APE are determined after coordination with the SHPO and concurrence obtained.

---

<sup>5</sup> <https://tnmap.tn.gov/historicalcommission>

This direct APE is northwest of US Highway 58 and includes portions of the ETPP that were previously developed, as well as wooded undeveloped areas. Blair Road, a DOE Haul Road, and both overhead and underground utilities cross the APE. The indirect APE is a 3,000-foot buffer that, based on modeling, will be subject to potential 55 decibel (dB) noise levels from aircraft. Given the local topography, in a valley between two ridges, a 3,000-foot buffer will also serve as an appropriate APE for potential visual impacts.

Four (4) previous investigations have been conducted within the APE.

1. In 1974, the University of Tennessee conducted an archaeological survey of the Oak Ridge Reservation. This study's stated goal was to identify prehistoric sites, but the investigators also documented resources dating to the historic period (Fielder 1974).
2. An architectural and archaeological survey of the K-25 Site and surrounding areas was conducted in 1994 (Morris 1998). This investigation concluded that the earthmoving associated with the K-25 plant and other facilities would have likely destroyed subsurface archaeological deposits. At the time of the survey, timber was being cleared due to the southern pine beetle infestation. This timbering caused extensive ground disturbance.
3. The Phase I Archaeological Survey of Parcel ED-3 and Historic Assessment of the Happy Valley Worker Camp, Roane County, Tennessee (Reed et al. 2008) survey investigated 182 acres, in an attempt to identify the Happy Valley temporary worker housing area. The Happy Valley survey is outside of the Direct APE, on the opposite side of US Highway 58.
4. The Phase I Archaeological Survey of Portions of Site 40RE224, The Wheat Community, Roane County, Tennessee (Callahan-Mims and Avery 2014) consisted of an archaeological investigation at the former location of five houses owned by John E. and George Arnold (711A and B), Sallie Belle Patton (722A), Ralph L. Phillips (725A), and Warren E. Jones (728A), and a barn owned by C. C. Watson (726A), and the location of Roane College at the time that the property was purchased by the U.S. War Department.

Previous investigations have identified a variety of resources in the APE:

**K-25 facility** – A Memorandum of Agreement (MOA) for the interpretation of historic properties at ETPP was executed in 2012. The MOA stipulates preservation of the K-25 Preservation Footprint and includes development of an equipment building and viewing tower to display equipment from the K-25 facility. A history center will also be developed in the Fire Station housed in building K-1652. The proposed undertaking will have no effect on this resource.

**Happy Valley Worker Camp (40RE577)** – The identified resources associated with the Happy Valley Worker Camp are identified with site number 40RE577. These resources are eligible for inclusion on the National Register of Historic Places (NRHP), under Criterion A for their association with the Manhattan Project (Reed et al. 2008). The proposed undertaking will have no effect on this resource.

**Wheat Community Archaeological District (40RE224)** – Site 40RE224 includes the George Jones Memorial Baptist Church, the George Arnold Property (site 711B), and Roane College.

George Jones Memorial Baptist Church was listed on the NRHP in 1992 and is significant under Criterion A for its association with the social history of the Wheat community, especially in reference to the Manhattan Project. The church is significant under Criterion C as a good example of the type of vernacular churches that were commonly constructed in rural areas.

Callahan-Mims and Avery (2014) found Sites 711A (John E. Arnold Property), 725A (Ralph Phillips Property), 726A (Chester C. and Hattie Watson Property), 728-1 and 728-2 (Warren E. Jones Property), and CRA-1 not NRHP-eligible and recommended that further investigation of these sites was not warranted. Site 722A (Sallie Belle Patton Property) was not relocated during the 2014 survey. Callahan-Mims and Avery recommended additional investigations to evaluate the significance of Roane College and the George Arnold Property (Site 711B) and determine whether they contribute to the significance of the Wheat Community Archaeological District. Implementation of the proposed undertaking will remove trees in the Wheat Community Archaeological District, an activity that has the potential to disturb significant archaeological deposits, if present.

**Cemeteries** – There are five cemeteries located within the indirect APE, but outside of the proposed airport construction limits. The Wheat Community African Burial Ground is located east of US Highway 58 and a cemetery associated with the Crawford Cumberland Presbyterian Church is located near the interchange of US Highway 58 and SR 95. The Ellis Cemetery is north of the direct APE, along Blair Road, and the Gallaher and Welcker cemeteries are south of the direct APE, near the confluence of Poplar Creek and the Clinch River.

The George Jones Memorial Cemetery is located adjacent to the church and within the direct APE.

Cemeteries are not usually considered eligible for listing in NRHP; however, they can be eligible under certain Criteria Considerations, usually Criteria Consideration D. Criteria Consideration D states that: “a cemetery is eligible if it derives its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events.” The cemeteries are small family plots or associated with a church, a pattern typical of a rural community. The people interred in the nearby cemeteries are multiple members of the Wheat Community, or were enslaved by members of the Wheat Community, and lived in the area, none of whom have been identified by past studies as being of transcendent importance.

#### **5.6.4 Environmental Consequences of the No-Action Alternative**

The No-Action alternative would result in no construction of the proposed airport leaving the site unchanged from the existing condition. As such, the No-Action alternative would not result in any direct, indirect, or cumulative impacts and no further analysis would be necessary and mitigation efforts would not be required. The George Jones Church and Cemetery will continue to be impacted visually and by noise from US 58.

### **5.6.5 Environmental Consequences of the Preferred Alternative**

Through several virtual Section 106 Consultation Meetings and review of available background information, FAA determined that the proposed airport will adversely affect the NRHP-listed George Jones Memorial Baptist Church. In a December 29, 2021 letter THC concurred with this determination and further recommended that “the airport design and construction should take into consideration the ongoing cultural resource mitigation measures being implemented to address the Department of Energy’s previous adverse effect to the now-demolished K-25 facility.”

### **5.6.6 Mitigation**

Anticipated adverse effects to the NRHP-listed George Jones Memorial Baptist Church associated with the proposed airport will consist of limited tree removal. The topic of tree removal was discussed extensively during the virtual Section 106 Consultation Meetings. Within the George Jones Memorial Baptist Church cemetery, trees will be carefully removed using hand tools and the work will be performed by skilled tree removal specialists to address the concerns related to the removal in the vicinity of headstones. Where practicable, the removed trees within the cemetery will be replaced with lower-growing species, selected in coordination with designated Wheat Community representatives.

Outside of the cemetery and church boundaries, tree removal will be performed by clearing and grubbing to limit the potential for taller trees to re-establish in these areas. Either the City of Oak Ridge or the U.S. DOE will be responsible for periodically maintaining the cleared areas, so that airport operations are not jeopardized by future tree growth.

FAA will maintain open lines of communication with DOE so that consideration of the ongoing activities memorializing the demolished K-25 facility are incorporated into planning and construction of the new airport.

In addition to these mitigation efforts, the realignment of the runway from what was shown in the original ALP moved the airport and runway further away from the Church and Cemetery and was able to move those resources off of the centerline of the approach. The realignment also reduced the number of trees impacted. During the Section 106 consultation it was shown that those visiting the National Park would not be able to physically see the proposed action due to elevations and the limited viewshed of the tower.

## **5.7 Land Use**

The compatibility of existing and planned land uses in the vicinity of an airport is usually associated with noise impacts. In addition to the impacts of noise on land use compatibility, other potential impacts of FAA actions on land use compatibility include disruption of communities, relocation, induced socioeconomic impacts, and land uses protected under Section 4(f). Land uses in regards to these resources are discussed in their respective sections. With respect to airports, discussion of this impact category should give assurances that activities associated with the Proposed Action conform to compatible land uses to the greatest extent

practicable. This also applies to lands in the immediate vicinity of the airport and should include any applicable zoning regulations. The assurances must correlate to known existing and planned land uses.

### **5.7.1 Regulatory Setting**

Chapter 9 of the 2020 Desk Reference identifies the regulations and statutes that may be related to the evaluation of Land Use. The following federal regulations (and state equivalents, if applicable) are those that address compatible land use at airports and are applicable to the activities of the Proposed Action.

#### 5.7.1a Airport Improvement Program (AIP)

The AIP is a federal program supplying grants for the planning and development of qualifying projects at public-use airports included in the NPIAS. For a proposed project to be considered for AIP funding, assurances must be provided that a project is consistent with existing development and/or land use plans for the area in which the airport is located. This includes assurances that proposed activities are compatible with normal airport operations, including the landing and takeoff of aircraft.

#### 5.7.1b TDOT Aeronautics Division

This Division of the state Department of Transportation (DOT) is responsible for assisting airports, airport sponsors, and private entities technical assistance for airport planning activities. The Aeronautics Division reviews and provides approval for ALPs on behalf of the FAA. This review includes assurances that proposed activities are consistent with compatible land uses.

### **5.7.2 Significant Impact Threshold**

The FAA has not established a significance threshold for land use. However, the 2020 Desk Reference indicates that “If the proposal would result in other impacts that have land use ramifications, for example, disruption of communities, relocation, and induced socioeconomic impacts, the impacts on land use should be analyzed in these contexts and described accordingly”. Additionally, while the EA must identify whether a Proposed Action is consistent with state or local plans an inconsistency may not, by itself, automatically generate a significant impact under NEPA review.

### **5.7.3 Analysis of Land Use**

In many cases, existing and planned land uses are determined by zoning ordinances put into place by the municipality having jurisdiction over the location of the land parcel. The current zoning in the location of the proposed airport is IND-2/IMDO and FIR. The City of Oak Ridge currently reserves federal property under the FIR zoning for Federal Industrial and Research facilities. This zone has been used by the DOE for many years as a zone for retention of federal property until a use is established and property is transferred to the City or other agency.

The property is currently controlled by the U.S. Department of Energy (DOE), the Community Reuse Organization of East Tennessee (CROET) and the Energy Solutions Corporation. There are also two privately owned parcels outside of the runway zone that would be purchased and included in the airport acreage and protective zone.

Once the City of Oak Ridge receives the transfer of the federal property and purchases the private property, the City plans to initiate a change to IND-3 zoning. The City of Oak Ridge's IND-3 zoning classification is an industrial district for their most inclusive properties for heavy industrial activity. Airports are permitted within this zone.

### **5.7.4 Environmental Consequences of the No-Action Alternative**

The No-Action alternative will not change the existing or future land uses within airport property or to areas in the immediate vicinity of the Airport. As a result, it will have no direct, indirect, or cumulative impacts on land use. No further analysis is required.

### **5.7.5 Environmental Consequences of the Preferred Alternative**

The proposed action would result in the acquisition/transfer of approximately 323-acres of land (Figure 5-2). At the conclusion of the acquisition/transfer, the COR will possess in fee simple or easement all necessary property for the construction and operation of the proposed action including Runway Protection Zones. However, due to the current, and proposed future zoning classification of the property where the proposed airport would be located, it will have no significant direct, indirect, or cumulative impact to land uses. No further analysis is required and no mitigation measures specific to land use are proposed.

## **5.8 Natural Resources, and Energy Supply**

This impact category evaluates the consumption of natural resources and use of energy supplies that may result from a Proposed Action. Natural resources can include water, asphalt, aggregate, wood, and other raw materials. Energy supplies include coal, natural gas, and other fossil fuels. The assessment herein includes consideration for all phases of the Proposed Action including construction, regular use, and maintenance.

### ***5.8.1 Regulatory Setting***

The statutes and Executive Orders relevant to this category are provided in Chapter 10 of the 2020 Desk Reference. In summary, proposed projects and activities should promote the production of clean renewable fuels and increases in the efficiency of products, buildings, and vehicles. Additionally, such project or activities should be designed and implemented to promote optimized performance, elimination of unnecessary use of resources, and protection of the environment. Federal agencies should also prioritize actions that reduce waste, cut costs, and enhance the resilience of infrastructure and operations. Per FAA Order 1053.1, it is FAA policy that facilities and associated activities be consistent with both NEPA and CEQ Regulations so that they “exemplify the highest standards of design, including sustainability principles.”

### ***5.8.2 Significance Threshold***

The FAA has not established a significance threshold for natural resources and energy supply. The 2020 Desk Reference does include factors to consider, including situations in which the demands of the Proposed Action may exceed available or future supply of natural or energy-based resources. If this scenario is anticipated and documented in an EA, additional analysis may be required in an EIS. Otherwise, it may be assumed that impacts are not significant.

### ***5.8.3 Analysis of Natural Resources and Energy Supply***

The Proposed Action is anticipated to use common construction materials that are in regular supply within Roane County. These include natural resource materials, and commodity materials, that are typical in construction of airports such as wood, concrete, gravel, and asphalt. Vehicle fuels to power routine construction equipment during the construction phase of the project would also be needed. Sources for such fuel are available in Roane County. Utilities are already available at the proposed airport location and will not result in demands that overreach the local supply.

### ***5.8.4 Environmental Consequence of the No-Action Alternative***

The No-Action alternative will result in no construction of the proposed airport and, therefore, will not have any direct, indirect, or cumulative impacts to supply and demand for natural resources and energy supply. No further analysis would be required.

### ***5.8.5 Environmental Consequences of the Preferred Alternative***

The Preferred Alternative would not require the use of scarce or unusual materials or natural resources and only a temporary increase in energy supply, primarily fuel consumption during construction, would occur. It is not anticipated that this temporary increase in demand during

construction would have the potential to cause demand to exceed available or future supplies of this resource. Utilities are already available at the proposed airport location and were sized for the operation of the K-25 facility. Therefore, the Preferred Action would have minimal direct, indirect, or cumulative impact to natural resources and energy supply. It would be assumed that the potential impacts are not significant and no mitigation is proposed.

## **5.9 Noise and Noise-Compatible Land Use**

Defined in the 2020 Desk Reference, “Noise is considered unwanted sound that can disturb routine activities (e.g., sleep, conversation, student learning) and can cause annoyance.” Aviation noise is, typically, the predominant public concern regarding aviation activities. As such, compatible land use (for both existing and planned uses) is often evaluated with emphasis on identifying the level for acceptable aircraft noise that will not cause adverse impacts to the surrounding community. Relevant land use plans as well as a general overview of existing and planned land uses should be considered in the evaluation of this category.

### **5.9.1 Regulatory Setting**

The full suite of statutes and regulations related to noise and noise-compatible land use can be found in Chapter 11 of the 2020 Desk Reference. In summary, FAA Order 1050.1F, Order 5050.4B, and the FAA, Part 150, Airport Noise Compatibility Planning Program (FAR Part 150) provide the regulatory framework for evaluating noise related to aircraft operation. Order 1050.1F requires that a significant noise impact must be determined through the use of the FAA’s Airport Environmental Design Tool 3E (AEDT 3E) along with local land use guidance and general guidance contained in Appendix A of FAR Part 150. FAR Part 150 establishes metrics on the extent of noise exposure surrounding an airport. It also includes guidelines identifying compatible and incompatible land uses within various Day-Night Average Sound Level (DNL) contours. DNL contours are used for airport noise assessments.

It should be noted that state and local agencies may hold noise and land use compatibility standards which differ from FAA requirements. Such local standards must be disclosed to the extent required under 40 CFR 1502.16(c) and 1506.2(d). However, the FAA does not use local standards to determine the significance of noise impacts.

### **5.9.2 Significance Threshold**

The AEDT 3E is used for calculating all the DNL noise levels at a location and plotting, specifically, the aircraft noise contours. The noise levels are solely due to aircraft activity and do not include background or ambient noise levels. The 65 DNL contour is a common FAA threshold as DNLs greater than 65 decibels (dB) are not typically considered compatible with residential land uses.

FAA Order 1050.1F clearly defines the significance threshold for noise as “The action would increase noise by DNL 1.5 dB or more for a noise sensitive area that is exposed to noise at or above the DNL 65 dB noise exposure level, or that will be exposed at or above the DNL 65 dB level due to a DNL 1.5 dB or greater increase, when compared to the no action alternative for the same timeframe.” For those actions that require a noise analysis, the Order further instructs that “the determination of

significance must be obtained through the use of noise contours and/or grid point analysis along with local land use information and general guidance contained in Appendix A of 14 CFR part 150.”

### **5.9.3 Analysis of Noise and Noise-Compatible Land Use**

A noise analysis for the proposed Oak Ridge Airport using the FAA’s Airport Environmental Design Tool 3d (AEDT 3d) was requested by FAA because there is no baseline noise information for the facility. For aviation noise analyses, the FAA has determined that the cumulative noise energy exposure of individuals to noise resulting from aviation activities must be established in terms of Yearly Day Night Average Sound Level (DNL), the FAA’s primary noise metric. FAA environmental standards require noise measurement if it is believed that a federal action would increase noise by DNL 1.5 decibels (dB) or more for a noise sensitive area that is exposed to noise at or above the DNL 65 dB noise exposure level, or that will be exposed at or above the DNL 65 dB level due to a DNL 1.5 dB or greater increase, when compared to the no action alternative for the same timeframe. For example, an increase from DNL 65.5 dB to 67 dB is considered a significant impact, as is an increase from DNL 63.5 dB to 65 dB.

No noise analysis is needed for projects involving Design Group I and II airplanes (wingspan less than 79 feet) in Approach Categories A through D (landing speed less than 166 knots) operating at airports whose forecast operations do not exceed 90,000 annual propeller operations (247 average daily operations) or 700 annual jet operations (2 average daily operations). While the proposed airport is forecast to have 15,906 total annual operations within its 20-year planning horizon, there are projected 5,491 annual jet operations for the 20th year of the forecast period. Therefore, a noise analysis must be made.

All FAA actions requiring noise, fuel burn or emissions modeling and for which the environmental analysis process has begun on or after March 29, 2021, are required to use this updated version of AEDT 3d (build 153.0.13097.1). The AEDT 3d implements the key functionalities from previous noise modeling and emissions and dispersion modeling systems and adds new capabilities. A high-level summary of those functionalities includes:

- Version 3d brings several improvements to aircraft performance modeling, including adding a new flight profile editor that allows users to create custom Aircraft Noise Performance (ANP) or BADA 4 procedural profiles. There is also now physics-based thrust reporting for ANP, which could result in some operations having negative thrust values when more drag than thrust is generated.
- Previously, AEDT limited aircraft speed to below 250 knots, but with the update, aircraft can accelerate beyond that airspeed once they reach an altitude of 10,000 feet MSL using the ANP model.
- In this update, emissions calculations have improved. It also provides support for reading albedo, Bowen ratio, and surface roughness values from an externally generated AERSURFACE output file.
- Microsoft SQL Server 2017 is also now supported in addition to Microsoft SQL Server 2012.

5.9.3a Noise Sensitive Areas

A noise sensitive area can be defined as an area where noise interferes with normal activities associated with its use. Normally, noise sensitive areas include residential, educational, health, and religious structures and sites, and parks, recreational areas, areas with wilderness characteristics, wildlife and waterfowl refuges, and cultural and historical sites. For example, in the context of noise from airplanes and helicopters, noise sensitive areas include such areas within the DNL 65 dB noise contour. Individual, isolated, residential structures may be considered compatible within the DNL 65 dB noise contour where the primary use of land is agricultural and adequate noise attenuation is provided. Also, transient residential use such as motels should be considered compatible within the DNL 65 dB noise contour where adequate noise attenuation is provided.

FAA guidance states that special consideration needs to be given to the evaluation of the significance of noise impacts on noise sensitive areas within Section 4(f) properties (including, but not limited to, noise sensitive areas within national parks; national wildlife and waterfowl refuges; and historic sites, including traditional cultural properties) where the land use compatibility guidelines in 14 CFR part 150 are not relevant to the value, significance, and enjoyment of the area in question. Table 5-7 presents a listing of land use compatibility guidelines and is the only noise and land use compatibility table currently in the Code of Federal Regulations.

<b>Table 5-7 Land Use Compatibility* With Yearly Day-Night Average Sound Levels</b>						
Land Use	Yearly day-night average sound level (DNL) in decibels					
	Below 65	65-70	70-75	75-80	80-85	Over 85
<b>Residential</b>						
Residential, other than mobile homes and transient lodgings	Y	N(1)	N(1)	N	N	N
Mobile Home Parks	Y	N	N	N	N	N
Transient Lodgings	Y	N(1)	N(1)	N(1)	N	N
<b>Public Use</b>						
Schools	Y	N(1)	N(1)	N	N	N

Nature exhibits and zoos	Y	Y	Y	N	N	N
Amusements, parks, resorts, and camps	Y	Y	Y	N	N	N
Golf courses, riding stables and water recreation	Y	Y	Y	30	N	N

Numbers in parenthesis refer to notes.

\*The designations contained in this table do not constitute a Federal determination that any use of land covered by the program is acceptable or unacceptable under Federal, State, or local law. The responsibility for determining the acceptable and permissible land uses and the relationship between specific properties and specific noise contours rests with the local authorities. FAA determinations under part 150 are not intended to substitute federally determined land uses for those determined to be appropriate by local authorities in response to locally determined needs and values in achieving noise compatible land uses.

Key to Table 5-7

SLUCM=Standard Land Use Coding Manual

Y (Yes)=Land Use and related structures compatible without restrictions.

N (No)=Land Use and related structures are not compatible and should be prohibited.

NLR=Noise Level Reduction (outdoor to indoor) to be achieved through incorporation of noise attenuation into the design and construction of the structure.

25, 30, or 35=Land use and related structures generally compatible; measures to achieve NLR of 25, 30, or 35 dB must be incorporated into design and construction of structure.

Notes for Table 5-7

- (1) Where the community determines that residential or school uses must be allowed, measures to achieve outdoor to indoor Noise Level Reduction (NLR) of at least 25 dB and 30 dB should be incorporated into building codes and be considered in individual approvals. Normal residential construction can be expected to provide a NLR of 20 dB, thus, the reduction requirements are often stated as 5, 10 or 15 dB over standard construction and normally assume mechanical

ventilation and closed windows year-round. However, the use of NLR criteria will not eliminate outdoor noise problems.

- (2) Measures to achieve NLR 25 dB must be incorporated into the design and construction of portions of these buildings where the public is received, office areas, noise sensitive areas or where the normal noise level is low.
- (3) Measures to achieve NLR of 30 dB must be incorporated into the design and construction of portions of these buildings where the public is received, office areas, noise sensitive areas or where the normal noise level is low.
- (4) Measures to achieve NLR 35 dB must be incorporated into the design and construction of portions of these buildings where the public is received, office areas, noise sensitive areas or where the normal level is low.
- (5) Land use compatible provided special sound reinforcement systems are installed.
- (6) Residential buildings require an NLR of 25.
- (7) Residential buildings require an NLR of 30.
- (8) Residential buildings not permitted.

The proposed airport would be located in Roane County, somewhat distant from significant noise sensitive land uses. Locations of the nearest residential communities to the proposed airport include Westwood, Country Club Estates, former Rarity Oaks, and the Preserve at Clinch River. There is a small church located 600 feet north of the approach and departure flight path. There are no 4f lands impacted by the proposed Airport.

Prior to World War II, the community of Wheat was located in and around the proposed airport site. Over the course of its history, Wheat was home to over 1,000 people, several different schools, at least three churches, a post office, and general store. As part of the Manhattan Project, all the land within and around Wheat was purchased by the U.S. government in 1943 and all the inhabitants were forced to move. All the structures, including the homes, outbuildings, and Wheat High School were later demolished with the exception of George Jones Memorial Missionary Baptist Church, which is extant. Access to the area is now controlled and the church does not have a regular service, but a reunion of residents and their descendants is held annually. This is the noise-sensitive property that is called the Wheat Church in this report. It is important to note that it is only used once a year for the reunion.

#### 5.9.3b AEDT Inputs

Noise exposure levels at the proposed Oak Ridge Airport were modeled using AEDT 3d. Noise levels were predicted for the proposed worst case condition (year 2040) forecast activity. Total annual operations for that year are projected at 15,906. Of these, roughly 7.6 percent are anticipated to be jet operations. The noise modeling was conducted to identify the effects of constructing a new airport facility to accommodate the forecasted growth in aviation activity in the Oak Ridge area. The predictions are expressed in DNL contours, which represent areas of equal noise levels. Data input for the AEDT 3d model included aircraft operations, operations by time of day, runway use, aircraft mix, and flight tracks.

The primary determinant of aircraft noise generation involves the forecast of operations by aircraft type at the proposed airport. Table 5-8 presents the forecast of annual aircraft operations, taken from the Airport Master Plan.

Year	Itinerant Operations	Local Operations	Total Operations
2020	10,350	1,282	11,632
2025	12,204	2,593	14,796
2030	12,616	2,691	15,307
2040	13,018	2,889	15,906

The breakdown by fleet mix is presented in Table 5-9. The 20<sup>th</sup> year forecast inputs (2040) represent the potential worst case noise impacts and were used by the model.

Aircraft	Single	Multi-engine	Jet	Total
2040	9,751	4,936	1,219	15,906

Assumptions in the analysis include:

- Operations are split equally between runway end usage.
- Operations are split equally between approaches and departures.
- Single-engine aircraft used the Piper Cherokee 180 aircraft in the AEDT database.
- Multi-engine aircraft are assumed to have noise producing characteristics similar to the King Air 350 aircraft.
- Jet aircraft were assumed to have the noise producing characteristics similar to the Hawker 800/800XP.

For this analysis, the worst case, 20-year forecast of activity was used. If the noise contours do not exceed the airport property limits for that level of activity, all the intervening years will have less noise impact.

### 5.9.3c Noise Contour Modeling Output

Figure 5-3 presents a graphic illustration of the noise contours that would be generated by aircraft operations during the 20<sup>th</sup> forecast year. As shown, all of the DNL 65 dB contour remains within airport property boundaries. It covers 159.6 acres of noise exposure. The DNL 70 dB and 75 dB are smaller in size and subsumed within the DNL 65 dB contour. They cover 84.8 and 45.7 acres respectively. Overall, the AEDT 3d computed the following areas for each noise contour:

Contour (dB)	Perc. Area (%)	Shape Area (Acres)
50	57%	1,841.4
55	24%	778.0
60	10%	339.1
65	5%	159.6
70	3%	84.8
75	1%	45.7

Figure 5-3 Noise Contours for 2040 Aircraft Operations

**5.9.4 Environmental Consequence of the No-Action Alternative**

The No-Action alternative will not change the existing noise in the location of the proposed airport or to areas within the immediate vicinity of the proposed airport. As a result, it will have no direct, indirect, or cumulative impacts noise. No further analysis is required.

**5.9.5 Environmental Consequences of the Preferred Alternative**

As shown in Figure 5-4, there are no noise sensitive land uses that occur within the proposed DNL 65 dB noise contours for the proposed airport. They are shown as the blue contours on the map that stay right at the proposed runway location. The green lines are DNL 70 dB contours and the one small orange contour is the DNL 75 dB area. However, since there is no airport located at the current site, the increase in projected noise off of airport property will likely be higher than the current noise level

at that site. FAA Order 5050.B, NEPA Implementing Instructions for Airport Actions, defines a significant noise increase as an increase of DNL 1.5 dB or greater for areas located within the DNL 65 dB noise contour. Because there are no noise sensitive areas or residential housing located in areas at or above DNL 65 dB that would increase by at least 1.5 dB, the project does not cross the threshold of significance. Residential population impacted is zero. Thus, there would be no significant noise impacts associated with future airport development. The DNL 65 dB noise contours would not include any residences. Figure 5-4 shows the noise contours in relation to historic sites, national parks, and residential areas.

## **5.10 Socioeconomics, EJ, and Children's Environmental Health and Safety Risks**

This section covers socioeconomics (Section 5.10.1), environmental justice (Section 5.10.2), and children's environmental health and safety risks (Section 5.10.3).

### **5.10.1 Socioeconomics**

Socioeconomics is an umbrella term used to describe aspects of a project that are either social or economic in nature. A socioeconomic analysis evaluates how elements of the human environment such as population, employment, housing, and public services might be affected by the proposed action and alternative(s).

#### **4.10.1.1. Regulatory Setting**

The primary statute related to socioeconomic impacts is the Uniform Relocation Assistance and Real Property Acquisitions Policy Act of 1970. In summary, this act contains provisions that must be followed if acquisition of real property or displacement of people would occur as a result of implementing the selected alternative.

#### **4.10.1.2. Significance Threshold**

The FAA has not established a significance threshold for socioeconomics in FAA Order 1050.1F; however, the FAA has identified factors to consider when evaluating the context and intensity of potential environmental impacts for socioeconomics (see Exhibit 4-1 of FAA Order 1050.1F). Please note that these factors are not intended to be thresholds. If these factors exist, there is not necessarily a significant impact; rather, the FAA must evaluate these factors in light of context and intensity to determine if there are significant impacts.

#### **4.10.1.3. Environmental Consequences of the No-Action Alternative**

The No-Action alternative will not change the human environment such as population, employment, housing, and public services in the location of the proposed airport or to areas within the immediate vicinity of the proposed airport. As a result, it will have no direct, indirect, or cumulative socioeconomic impacts. No further analysis is required.

#### **4.10.1.4. Environmental Consequences of the Proposed Action**

The proposed action would not have a potential impact on individuals' income, population, housing, public services, or social conditions within the PSA or the secondary study area. The proposed action could result in an increase in economic activity and employment within the study areas due to the addition of employees to manage and operate the airport; as well as providing additional access options to visit the Oak Ridge Reservation (ORR), the planned K-25 observation tower, and other Section 4(f) properties in the vicinity of the proposed airport.

The proposed action would require the closure of several roads that currently provide access points to the ORR. These roads include Perimeter Road, Americus Avenue, Victorious Boulevard, and Haul Road. Heritage Center Boulevard would become the primary entrance to the ORR and would require

a bridge under the runway to maintain access; as well as, maintain rail access to the industrial facilities located southwest of the proposed airport at the Powerhouse site. In addition, the proposed action would require the acquisition/transfer of 323-acres of land and three buildings to construct and operate the proposed airport.

#### 4.10.1.5. Mitigation

Mitigation measures for the impacts associated with the proposed road closures include maintaining Perimeter Road, but with restricted access so it can be used on an as needed basis for the delivery of large cargo exceeding the size limitations of the Heritage Center Boulevard bridge. Use of Perimeter Road would be controlled by COR to protect the Runway Protection Zone. In addition, a bridge or bridges would be constructed so that Heritage Center Boulevard can continue to be the primary access point to the ORR while also allowing the railroad spur from the Norfolk Southern Short Line to the Powerhouse site to remain usable. The proposed bridge or bridges will also allow all public utility services to remain available within the study area. Only one of the three buildings to be acquired is currently occupied. UCOR leases the 1225 building from JMM Realty. Buildings 1007 and 1000 are vacant. All land and building acquisitions/transfers will abide the FAA AC for acquisitions and the Uniform Relocation Assistance and Real Property Acquisition Policies Act.

### **5.10.2 Environmental Justice**

Environmental justice is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies. Fair treatment means that no group of people should bear a disproportionate share of the negative environmental consequences resulting from industrial, governmental, and commercial operations or policies.

#### 5.10.2.1. Regulatory Setting

The statutes and Executive Orders relevant to this category are provided in Chapter 12 of the 2020 Desk Reference. In summary, Title VI of the Civil Right Act of 1964 states that “No person in the United States shall, on the ground of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance.” Title VI explicitly prohibits any discrimination in Federally funded programs and projects, including those sponsored by the FAA.

#### 5.10.2.2. Significance Threshold

The FAA has not established a significance threshold for environmental justice in FAA Order 1050.1F; however, the FAA has identified factors to consider when evaluating the context and intensity of potential environmental impacts for environmental justice (see Exhibit 4-1 of FAA Order 1050.1F). Please note that these factors are not intended to be a threshold. If these factors exist, there is not necessarily a significant impact; rather, the FAA must evaluate these factors in light of context and intensity to determine if there are significant impacts.

#### 5.10.2.3. Environmental Consequences of the No-Action Alternative

The No-Action alternative would not have any impact on other environmental impact categories nor would it have an impact on the physical or natural environment that affect an environmental justice population. As a result, it will have no direct, indirect, or cumulative environmental justice impacts. No further analysis is required.

#### 5.10.2.4. Environmental Consequences of the Proposed Action

There are no minority or low-income populations in the location of the proposed airport; therefore, the only potential impact to environmental justice populations would be related to noise impacts. As documented in Section 5.9, noise contours above 55dB would not occur during airport operations outside of the primary and secondary study areas, and all noise above 65dB would remain within the proposed airport boundary. Therefore, there would be no direct, indirect, or cumulative impacts to environmental justice populations as a result of the proposed action.

### **5.10.3 Children's Environmental Health and Safety Risks**

Pursuant to Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks 62 Federal Register 19885, (April 21, 1997), Federal agencies are directed, as appropriate and consistent with the agency's mission, to make it a high priority to identify and assess environmental health risks and safety risks that may disproportionately affect children. The FAA is encouraged to identify and assess environmental health risks and safety risks that the agency has reason to believe could disproportionately affect children. Environmental health risks and safety risks include risks to health or to safety that are attributable to products or substances that a child is likely to come in contact with or ingest, such as air, food, drinking water, recreational waters, soil, or products they might use or be exposed to.

#### 5.10.3.1. Regulatory Setting

The Executive Order relevant to this category are provided in Chapter 12 of the 2020 Desk Reference. In summary, The Executive Order directs Federal agencies to analyze their policies, programs, activities, and standards for any environmental health or safety risks that may disproportionately affect children. Included in these categories are risks to health or safety that are attributable to products or substances that a child is likely to come in contact with or ingest, such as air, food, water, recreational waters, soil, or products they might use or be exposed to.

#### 5.10.3.2. Significance Threshold

The FAA has not established a significance threshold pertaining to impacts to children's environmental health and safety in FAA Order 1050.1F; however, the FAA has identified a factor to consider when evaluating the context and intensity of potential environmental impacts for children's environmental health and safety (see Exhibit 4-1 of FAA Order 1050.1F). Please note that this factor is not intended to be a threshold. If this factor exists, there is not necessarily a significant impact; rather, the FAA must evaluate this factor in light of context and intensity to determine if there are significant impacts. The factor to consider that may be applicable to children's environmental health and safety

includes, but is not limited to, situations in which the proposed action or alternative(s) would have the potential to lead to a disproportionate health or safety risk to children.

#### 5.10.3.3. Environmental Consequences of the No-Action Alternative

The No-Action alternative would not have any impact on other environmental impact categories nor would it have an impact on the physical or natural environment that would affect children's health or safety. As a result, it will have no direct, indirect, or cumulative children's health or safety impacts. No further analysis is required.

#### 5.10.3.4. Environmental Consequences of the Proposed Action

There are no schools, daycares, parks, or children's health clinics in the location of the proposed airport; therefore, the only potential impact to children's health or safety would be related to air quality impacts. As documented in Section 5.1, Based on air emissions modeling and analysis, the proposed action would not result in any substantial increase in air emissions. No applicable general conformity *de minimis* thresholds would be exceeded. Therefore, there would be no direct, indirect, or cumulative impacts to children's health or safety as a result of the proposed action.

## 5.11 Visual Effects

FAA Order 5050.4B and FAA Order 1050.1F require project sponsors to identify the light emissions (e.g., strobe lights, high-intensity airfield or facility lighting) associated with a Proposed Action that could visually affect a light-sensitive area (including residential areas, parks, and recreational areas). FAA is also required to consider whether visual or aesthetic impacts would result from a Proposed Action. Per the 2020 Desk Reference, light emissions and visual effects should each be discussed discretely in this section. Additionally, this reference instructs: "Visual effects on resources discussed in other sections of a NEPA document should be discussed in those sections, and cross-referenced in this section." The overlap between this impact category and others is a result of certain resources contributing to the suite of elements that create the whole of the visual environment. The visual impacts for other required categories that are discussed in those associated sections within this EA are a) Biological Resources; b) Department of Transportation Act, Section 4(f); c) Historical, Architectural, Archeological, and Cultural Resources; and d) Wild and Scenic Rivers (a component of Water Resources).

### 5.11.1 Regulatory Setting

There are no formal federal regulations, permits or other approvals that are related to this impact category. However, there may be special purpose laws and requirements that should be researched during analysis. Informal consultation is recommended with local agencies, adjacent communities, and the THC as Section 106 and or Section 4(f) resources may be influenced by changes to visual effects. There also may be state and local regulations, policies, and zoning ordinances that apply to visual effects and or light emissions.

### **5.11.2 Significance Threshold**

The FAA has not established a significance threshold for either light emissions or visual effects. The 2020 Desk Reference does include factors and questions to consider when analyzing this category. For Light Emissions, this includes an evaluation to determine whether the Proposed Action will cause a general annoyance or interfere with normal activities. Additionally, potential negative impacts to the visual character of the area due to light emissions from the proposed project should be considered. These include determining the importance, uniqueness, and aesthetic value of visual resources in the area. With respect to Visual Effects, the assessment should also address the potential for the Proposed Action to contrast with the visual character of the area and if the activity will negatively affect the nature of the area's visual character, including the importance, uniqueness, and aesthetic value. Finally, if the Proposed Action will block or obstruct the views of visual resources, this effect should also be discussed.

### **5.11.3 Analysis of Visual Effects**

The affected environment for visual effects includes the PSA, as well as areas immediately adjacent and surrounding the proposed airport. This section will identify the extent that the proposed project may produce light emissions that may interfere with normal activity or affect the area, which is visually characterized by industrial areas and forested land within the location of the proposed airport. The Wheat Community Archaeological District (40RE224), the George Jones Memorial Baptist Church site, which is listed on the National Register of Historic Places, and portions of the Black Oak Ridge Conservation Easement (BORCE) are located in the northeast corner of the PSA. In addition to these resources within the PSA, the K-25 Historical Area and the Happy Valley Work Camp (40RE577) are located within the secondary study area. There are no recorded scenic resource protection areas, such as Wild and Scenic Rivers, or areas of similar designation in visual proximity to the Airport. Table 5-10 provides a summary of the thresholds and factors to consider when performing an analysis of impacts to this category, as described in Exhibit 4-1 of the 2020 Desk Reference.

This analysis showed that due to the closed landfill mound adjacent to the proposed airport site and the limited viewing angle of the tower, it is physically impossible for an individual either in the tower or on the ground to see any portion of the northern half of the runway. Line-of-sight profiles were produced from the viewing tower along the north and south boundaries of the landfill mound showed there were no significant visual impacts, and these results were presented to SHPO and the National Park Service during the Section 106 discussions. Additionally, the potential visual impacts to someone walking the K-25 site was also evaluated. Ground elevations at the K-25 National Park Site were compared to the proposed finished grade of the proposed airport. The evaluation determined that the entire central and southern profile of the runway would be a minimum of 50' higher than any location on the K-25 National Park walking trail. Any visitor on the K-25 that would look south towards the proposed airport would see a 50' grass slope. Additionally, due to the significant difference in elevations and the distance of the runway and taxiway lights from the toe of slopes, a walking visitor at the Viewing Tower would not be able to see any of the airport light fixtures.

**Table 5-10 Summary of Visual Effects Analysis – Factors To Consider**

Factor from 2020 Desk Reference	Potential Effect by Proposed Action?
<p><b>Light Emissions:</b> The Proposed Action will create an annoyance or otherwise interfere with normal activities.</p>	<p>The Proposed Action will occur south of the K-25 Historical Area and west of the Wheat Community Archeological District. Construction, operation, and maintenance of the proposed airport is not expected to project significant light emissions to areas outside the airport property and light will not interfere with normal activities.</p>
<p><b>Light Emissions:</b> The visual character of the area due to light emissions - including the importance, uniqueness, and aesthetic value of the affected visual resources – will be significantly affected by the Proposed Action.</p>	<p>There are no recorded scenic resource protection areas, such as Wild and Scenic Rivers, or areas of similar designation in visual proximity to the proposed airport. The area already supports lighting for the existing industrial facilities in the area. No significant changes to lighting will occur.</p>
<p><b>Visual Effects:</b> Adverse impacts to the visual character of the area, including the importance, uniqueness, and aesthetic value of the affected visual resources will result from the Proposed Action.</p>	<p>The two (2) primary resources to considered when analyzing the potential for adverse impacts to the visual character of the area are K-25 area and the George Jones Memorial Baptist Church site. Specifically, will the proposed airport be visible to visitors of these resources. The potential visibility of the airport from the K-25 area would be from the proposed K-25 viewing platform and those walking the K-25 historical site. An analysis of a 1-mile radius view shed from the proposed viewing platform was conducted. This analysis showed that the proposed airport would not be visible from the proposed K-25 viewing platform. In addition, the topography just north of the proposed airport location is higher in elevation, further providing a visual obstruction of the proposed airport from the K-25 area. The proposed airport location is not currently visible from the church due to the forested areas located between the airport and the church site. Although some tree removal would occur between the proposed airport and church site to remove obstructions within the 20:1 Part 77 Visual Approach Surface, the remaining trees would still provide a visual barrier and the airport would not be visible from the church site. Additionally, discussions during the Section 106 consultation identified that the tree removal that would occur during the proposed airport's development may have the added benefit of allowing visitors to the K-25 viewing tower to see the George Jones Memorial Church. Figure 5-5 shows the K-25 viewing platform view shed and the church site in relation to the proposed airport.</p>
<p><b>Visual Effects:</b> The Proposed Action will contrast with the visual resources and/or character in the study area.</p>	<p>As documented above, the proposed airport would not contrast with the visual resources or character in the study area.</p>

---

**Visual Effects:** To what degree will the Proposed Action potentially block or obstruct the views of visual resources, including whether these resources would still be viewable from other locations?

The Proposed Action will not result in significant obstruction of visual resources. The resources in the area would still be visible from the same areas they are currently visible from.

---

*Source: Significance Thresholds and factors to consider established in FAA Order 1050.1F and FAA 2020 Order 1050.1F Desk Reference*

#### **5.11.4 Environmental Consequence of the No-Action Alternative**

The No-Action alternative will result in no construction of the proposed airport and, therefore, will not have any visual effects. No further analysis would be required.

#### **5.11.5 Environmental Consequences of the Preferred Alternative**

As documented in the analysis of visual affects, the proposed airport would not be visible from the proposed K-25 viewing platform or from the George Jones Memorial Baptist Church site. In addition, the proposed airport would not block the view of these resources from areas where they are currently visible from. Therefore, significant change to the visual aesthetic of the area will not occur nor will the resulting visual effects conflict with the existing environment. There are no recorded scenic resource protection areas, such as Wild and Scenic Rivers, or areas of similar designation in visual proximity to the Airport. Due to the distance to nearby residents and surrounding forested areas the Preferred Alternative would not visually affect surrounding areas or nearby light-sensitive areas such as homes, parks and recreational areas. Therefore, no significant direct, indirect, or cumulative visual effects are anticipated due to the implementation of the Preferred Action. No further analysis would be required.

## **5.12 Water Resources**

Water Resources are defined by the EPA as “lakes, streams, groundwater, coastal waters, wetlands, and other waters; their associated ecosystems; and the human uses they support (e.g., drinking water, recreation, and fish consumption).” The quality and distribution of available water resources are essential to both human and ecosystem health. Proper stewardship of water resources also promotes proper functionality and sustainability of the hydrologic cycle. Per the 2020 Desk Reference, this chapter should discuss the following main topics: a) Wetlands; b) Floodplains; c) Surface Waters; d) Groundwater; and e) Wild and Scenic Rivers. Each of these components is interrelated within a watershed and, as a whole, support the local watershed system.

Per FAA Order 1050.1F, “if an environmental impact category is not relevant to the proposed action or any of the reasonable alternatives identified (i.e., the resources included in the category are not present or the category is not otherwise applicable to the proposed action and alternative[s]), this should be briefly noted and no further analysis is required.” As such, a discussion of these resources will not be included in the subsequent subsection of this chapter.

### **5.12.1 Non-Applicable Water Resource Impact Categories**

#### *Groundwater*

The 2020 Desk Reference defines groundwater as subsurface water that occupies the space between sand, clay and rock formations and an aquifer as the geologic layers that have the ability to store or transmit groundwater to wells, springs and other water sources. The EPA has designated certain aquifers as sole source aquifers and if impacts are anticipated to a sole source aquifer, then the EPA regional office must be consulted with as required by the Safe Drinking Water Act (SDWA). To remain compliant with NEPA, the project boundaries were analyzed for EPA-designated sole source aquifers. None were identified. No effects to groundwater resources are expected.

#### *Wild and Scenic Rivers*

The Department of the Interior National Park Service (NPS), USFWS, Bureau of Land Management (BLM), and the Department of Agriculture (US Forest Service) has oversight of the Wild and Scenic Rivers Act of 1968. The FAA is required to determine if the Proposed Action or the No Action alternative would affect a designated area under the National Wild and Scenic River System (WSRS) or a free-flowing water body designated under the Nationwide Rivers Inventory (NRI). No effects to WSRS or NRI designated water bodies are expected.

### **5.12.2 Regulatory Setting**

The suite of applicable laws, statutes, and other regulations for this impact category is quite extensive and is fully disclosed within the 2020 Desk Reference. Some provisions include protections that overlap the impact categories discussed. Table 5-11 provides some of the primary mandates for consideration when evaluating potential effects to applicable water resources categories by the proposed project. This list is not exhaustive. Thorough coordination with all regulatory agencies having authority over the proposed activities should be done to ensure full compliance with all applicable regulations.

**Table 5-11 Regulations Applicable to Water Resources for Proposed Action\***

<b>Statute</b>	<b>Applicable Impact Categories</b>	<b>Oversight Agency</b>	<b>Summary</b>
Clean Water Act (CWA)	<ul style="list-style-type: none"> <li>• Wetlands</li> <li>• Surface Waters</li> </ul>	EPA, USACE, state, and tribal Water Quality Agencies	Establishes structure for regulating the discharge of pollutants into waters of the US. Specifically, CWA Section 303(d), Section 404, Section 401, and Section 402, which establishes the NPDES permit program.
Executive Order 11988, <i>Floodplain Management</i> ;  DOT Order 5650.2, <i>Floodplain Management &amp; Protection</i>	<ul style="list-style-type: none"> <li>• Floodplains</li> </ul>	DOT	Federal agencies must “avoid to the extent possible” adverse impacts to 100-year floodplains and/or floodplain development wherever there is a “practicable alternative”. DOT should avoid and mitigate adverse floodplain impacts in agency actions, planning programs, and budget requests.
Executive Order 11990, <i>Protection of Wetlands</i> ;  DOT Order 5660.1A, <i>Preservation of the Nation’s Wetlands</i>	<ul style="list-style-type: none"> <li>• Wetlands</li> </ul>	DOT	Requires federal agencies to “avoid to the extent possible” any adverse impacts to wetlands and to avoid direct or indirect support of new construction in wetlands wherever there is a “practicable alternative”. Transportation facilities should be designed and operated to assure the protection and enhancement of wetlands to the fullest extent practicable.
Fish and Wildlife Coordination Act	<ul style="list-style-type: none"> <li>• Wetlands</li> <li>• Surface Waters</li> </ul>	USFWS, NMFS, State wildlife agencies	Federal agencies are to consult with the USFWS and/or the NMFS, and appropriate state wildlife agencies regarding conservation of wildlife resources for projects that may affect the water of any stream or other water body, including wetlands.
National Flood Insurance Act	<ul style="list-style-type: none"> <li>• Floodplains</li> </ul>	FEMA	Established NFIP, a voluntary floodplain management program for cities, towns, or counties, implemented by FEMA. Any action within a FEMA-mapped floodplain in a participating community must follow the identified FEMA-approved floodplain regulations.
Rivers and Harbors Act	<ul style="list-style-type: none"> <li>• Wetlands</li> <li>• Surface Waters</li> </ul>	USACE; USCG	Established to protect the navigability of waters used for commerce in the United States.
Safe Drinking Water Act	<ul style="list-style-type: none"> <li>• Surface Waters</li> <li>• Groundwater</li> </ul>	EPA	Prohibits federal agencies from funding actions that would contaminate an EPA-designated sole source aquifer or its recharge area.

DOT = U.S. Department of Transportation; EPA = Environmental Protection Agency; FEMA = Federal Emergency Management Agency;

NFIP= National Floodplain Insurance Program NMFS = National Marine Fisheries Service; USACE = U.S. Army Corps of Engineers;  
USFWS = U.S. Fish and Wildlife Service.

*\*In addition to the above, there may be state and local regulations that apply to the proposed project. This is determined on a case-by-case basis by contacting relevant state and local agencies in the early stages of project planning.*

### **5.12.3 Wetlands**

#### **5.12.3a Regulatory Setting for Wetlands**

Wetlands addressed in this section include jurisdictional wetlands and other Waters of the U.S. (WOTUS) designated under Section 404 of the CWA, further defined under 33 CFR § 328.3(a). Any surface water, or associated wetland, not meeting this federal definition is considered non-jurisdictional and does not receive statutory protection under the CWA. Under Section 404, the USACE has authority and responsibility for regulating activities that involve wetlands connected to WOTUS. Wetlands are lowland areas covered with shallow and sometimes temporary or intermittent waters. They include, but are not necessarily limited to the following: swamps, marshes, bogs, river overflows, and tidal overflows, as well as estuarine areas and shallow lakes and ponds with emergent vegetation. Wetlands have been federally characterized by the presence of specific types of vegetation, hydrology, and soils. For this EA, the limits of federal and state jurisdictional wetlands within, and near to, the proposed project area were field verified by the USACE and TDEC.

Filling or disturbing wetlands for commercial development, public infrastructure, etc. are some of the regulated activities controlled by a permit review process administered by the USACE. The USACE also enforces Executive Order 11990, Protection of Wetlands, which requires Federal agencies to avoid, to the extent possible, adverse impacts associated with the destruction or modification of wetlands. The State of Tennessee has not adopted its own wetland regulations; however, if an alteration to a federally regulated wetland will occur as a part of a proposed action, then an Aquatic Resource Alteration Permit (ARAP) must be obtained from TDEC. The State may require an ARAP even if the project does not require federal permitting. However, if a federal permit is necessitated, then a Section 401 Water Quality Certification (WQC) must be obtained from the State, ensuring the proposed action would not violate state water quality standards. Both the USACE and TDEC may require compensatory mitigation for impacts to wetland resources.

#### **5.12.3b Significance Threshold for Wetlands**

FAA Order 1050.1F identifies that significant impacts to wetlands occur when a proposed activity would a) adversely affect a wetland's function to protect the quality or quantity of municipal water supplies (including surface waters and sole source or other aquifers); b) substantially alter the hydrology needed to sustain the affected wetland's values and functions (or those of a connected wetland); c) substantially reduce the affected wetland's ability to retain floodwaters or storm runoff, thereby threatening public health, safety or welfare (welfare includes cultural, recreational, and scientific resources or property important to the public); d) adversely affect the maintenance of natural systems supporting wildlife and fish habitat, or economically important timber, food, or fiber resources of the affected or surrounding wetlands; e) promote

development of secondary activities or services that would cause the circumstances listed above to occur; or f) be inconsistent with applicable state wetland strategies.

5.12.3c Analysis of Wetlands

A Jurisdictional Waters report, which is provided in Appendix D, was completed for the PSA by S&ME. During S&ME's site visits, 17 perennial/intermittent streams, 10 wet weather conveyances (WWCs)/ephemeral streams, 28 wetlands, and 4 open water areas were observed within the evaluation boundary (Figure 4 in the Jurisdictional Waters report). The report was submitted to USACE for verification. A federal USACE preliminary jurisdictional determination (JD) was obtained for 5 of the intermittent streams and 5 of the wetlands; and an approved JD was obtained for the remaining 12 perennial/intermittent streams, 10 WWCs/ephemeral streams, 23 wetlands, and 4 open water areas. Both JDs were provided in a letter dated August 27, 2021 and a copy is provided in Appendix E. Table 5-12 below summarizes the wetlands delineated on site.

**Table 5-12 Delineated Wetlands**

<b>Wetland</b>	<b>Acres</b>	<b>Wetland</b>	<b>Acres</b>
WA	11.50	WM	0.16
WAA	0.78	WN	0.07
WB	0.60	WO	0.01
WBB	1.02	WP	0.33
WC	0.17	WQ	0.25
WCC	0.19	WR	0.04
WE	0.11	WS	0.01
WF	0.04	WT	0.03
WG	0.01	WU	2.41
WH	0.01	WV	0.07
WI	0.02	WW	0.06
WJ	0.05	WX	0.05
WK	0.14	WY	0.08
WL	0.06	WZ	0.04
<b>Total 18.31-acres</b>			

The Approved JD determined that wetlands WL, WM, WW, and WX are non-adjacent wetlands and are not jurisdictional under the Navigable Waters Projection Rule of the Clean Water Act.

The Proposed Action would include the clearing of trees and grading activities within the proposed airport boundary impacting wetlands and streams. An analysis to determine if these impacts are significant is necessary. Table 5-13 provides a summary of the thresholds and factors to consider when performing an analysis of impacts to this category, as described in Exhibit 4-1 of the 2020 Desk Reference.

**Table 5-13 Summary of Wetland Resource Analysis**

FAA Threshold	Proposed Action Meets or Exceeds Threshold?
<b>Threshold:</b> Adverse effects to wetland’s function to protect the quality or quantity of municipal water supplies, including surface waters and sole source and other aquifers	No
<b>Threshold:</b> Substantially alter the hydrology needed to sustain the wetland values and functions or those of a connected wetland	Minimal
<b>Threshold:</b> Substantially reduce the wetland’s ability to retain floodwaters or storm runoff, threatening public health, safety or welfare	Minimal
<b>Threshold:</b> Adversely affect the maintenance of natural systems supporting wildlife and fish habitat or economically important timber, food, or fiber resources of the affected or surrounding wetlands	No
<b>Threshold:</b> Promote development of secondary activities or services that would cause the circumstances listed above to occur	No
<b>Threshold:</b> Be inconsistent with applicable state wetland strategies.	No, appropriate permits will be obtained.

*Source: Significance Thresholds and factors to consider established in FAA Order 1050.1F and FAA 2020 Order 1050.1F Desk Reference*

5.12.3d Environmental Consequence of the No-Action Alternative

The No-Action alternative will result in no construction of the proposed airport and, therefore, will not have any impacts to wetlands. No further analysis would be required.

5.12.3e Environmental Consequences of the Preferred Alternative

The Proposed Action includes direct impacts to wetlands as a result of construction activities. Direct impacts are associated with the placement of fill materials into wetlands and other surface waters that are regulated by the USACE and/or TDEC. The Proposed Action will include the removal of trees and grading activities within the proposed airport boundary which would impact wetlands and streams within the limits of disturbance for the clearing and grading. Direct impacts within the construction footprint will potentially result in 8.90-acres of direct impacts to jurisdictional wetlands and 0.27-acres of non-jurisdictional wetlands (Figure 5-6).

5.12.3f Avoidance and Minimization of Wetland Impacts

Avoidance and minimization of impacts to wetlands have been considered, however, due to the necessary clearing of trees and grading of the area for the construction of the airport, impacts cannot be completely avoided. The appropriate permitting and mitigation for the proposed impacts will take these impacts into account.

5.12.3g Consultations, Permits, and Other Approvals for Wetland Impacts

The U.S. Army Corps of Engineers (USACE) has regulatory responsibilities pursuant to Section 404 of the Clean Water Act (33 U.S.C. 1344) and Section 10 of the Rivers and Harbors Act of 1899 (33 U.S.C. 403). Under Section 10, the USACE regulates any work in, or affecting, navigable waters of the U.S. It appears the review area does not include navigable waters of the U.S. and would not be subject to the provisions of Section 10. Under Section 404, the USACE regulates the discharge of dredged and/or fill material into waters of the U.S., including wetlands. Based on estimated impacts, the Proposed Action would require obtaining a Section 404 individual permit and TDEC would require an individual ARAP permit.

5.12.3h Mitigation for Wetland Impacts

In addition to obtaining the necessary permits, the impacts to the jurisdictional wetlands would be mitigated through credit purchases from an approved mitigation bank. No mitigation would be required for the impacts to the non-jurisdictional wetlands. However, impacts (and therefore mitigation) could be reduced if impacts are reduced in final design.

#### **5.12.4 Floodplains**

5.12.4a Regulatory Setting for Floodplains

Floodplains are defined in DOT Order 5650.2 as “lowlands and relatively flat areas adjoining inland and coastal waters including flood prone areas of offshore islands.” FAA Order 1050.1F requires FAA officials “to take actions to reduce the risk of flood loss, minimize the impact of floods on human safety, health, and welfare, and restore and preserve the natural and beneficial values served by the floodplains” (Executive Order 11988, Flood Plain Management Act and DOT Order 5650.2). To comply, all FAA actions must avoid floodplains to the greatest extent practicable.

Through review of FEMA floodplain maps, FAA can determine if a potential impact to the base floodplain is expected. If there are no impacts to the base floodplain, no further analysis is needed. However, if a potential impact is expected from the Proposed Action, this would constitute a floodplain encroachment and further analysis would be needed. If a Proposed Action involves a significant floodplain encroachment, the FAA must issue a written finding identifying the proposed encroachment as the only practicable alternative. The FAA must provide the finding within or together with a NEPA document.

5.12.4b Significance Threshold for Floodplains

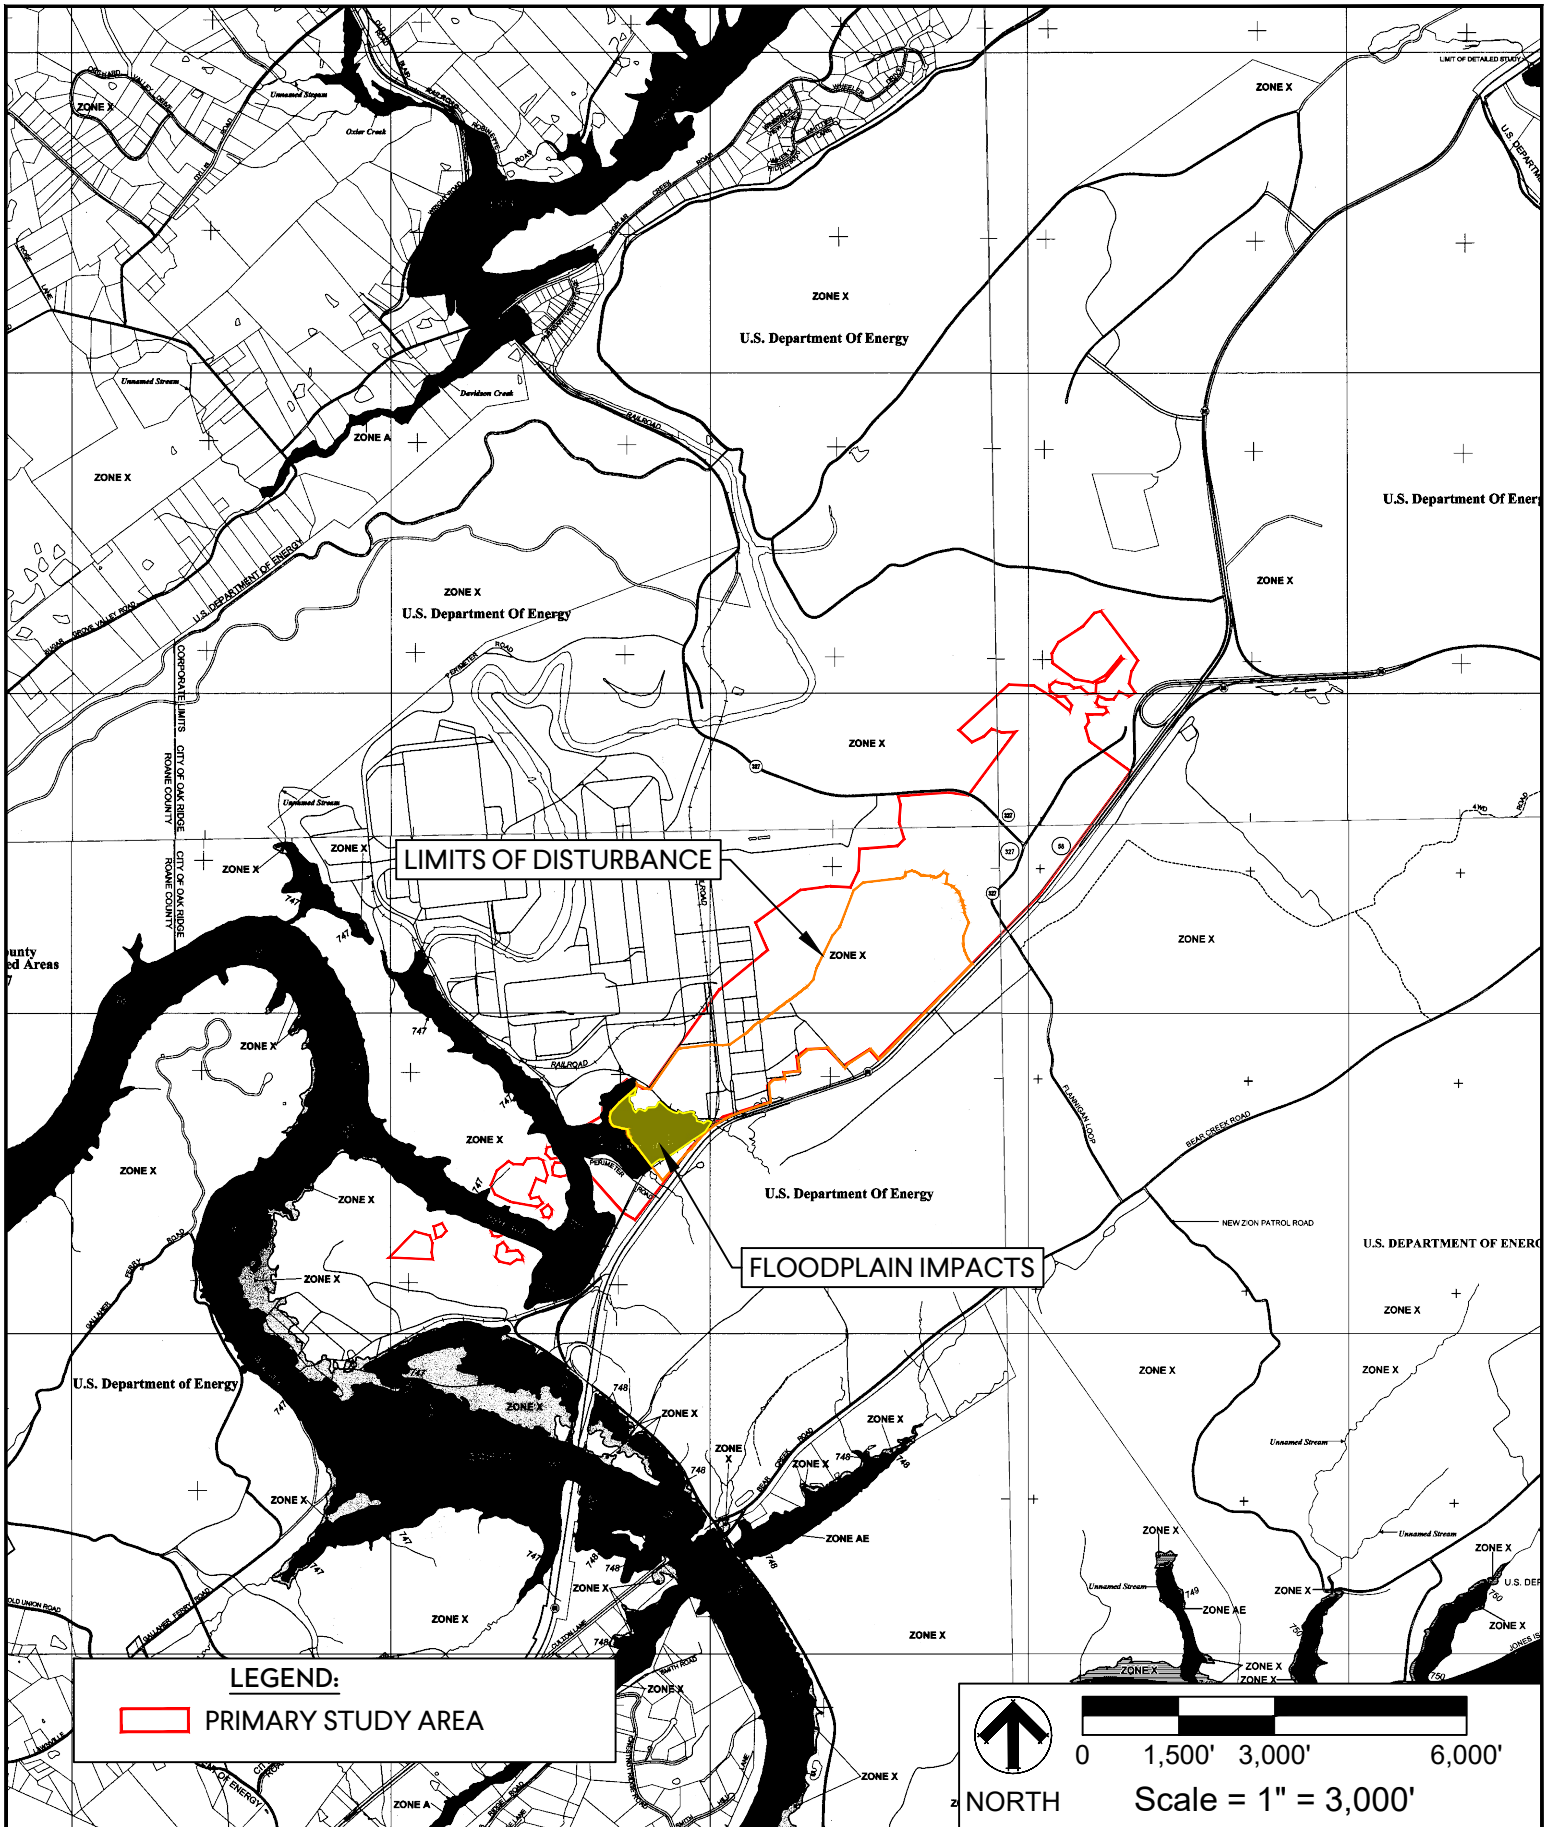

FAA Order 1050.1F provides that if a Proposed Action will encroach upon a floodplain, the FAA must determine whether such encroachment is significant. Significant floodplain impacts are

defined as the action causing “notable adverse impacts on natural and beneficial floodplain values,” as defined in DOT Order 5650.2. Per this DOT Order, significant encroachment in a floodplain result in one or more of the following construction or flood-related impacts: a) considerable probability of loss of human life, b) likely future damage associated with the encroachment that could be substantial in cost or extent, including interruption of service on or loss of a vital transportation facility, and c) a notable adverse impact on “natural and beneficial floodplain values.” Paragraph 4.k of DOT Order 5650.2 describes these values as including (but not limited to) “natural moderation of floods, water quality maintenance, groundwater recharge, open space, natural beauty, scientific study, outdoor recreation, agriculture, aquaculture, and forestry.”

#### 5.12.4c Analysis and Findings of Floodplains

The objective of an EA floodplain analysis is to determine if a proposed action encroaches on the base floodplain. The 100-year floodplain is considered the base floodplain in this evaluation and FEMA Flood Insurance Rate Maps (FIRM) are used as the primary information source. In order to differentiate between differing levels of flood hazard, FEMA created an array of zones corresponding to a location’s actual flood risk. The Federal Emergency Management Agency (FEMA) flood zone designations include: Zone A (subject to inundation by the 1% annual-chance flood event with no base flood elevation (BFE) determined), Zone AE (subject to inundation by the 1% annual-chance flood event with BFE determined), Zone VE (subject to inundation by the 1% annual-chance flood event with additional hazards due to storm waves, BFE determined), and Zone X (minimal risk areas outside the 1% and 0.2% annual-chance floodplains with no BFE or base flood depths determined). In addition, some areas have special flood-related hazards and are designated as Special Flood Hazard Areas (SFHA). A SFHA is an area where NFIP floodplain management regulations must be enforced. In this case, FEMA flood designation for most of the PSA and surrounding area is Zone X (unshaded); however, the southwestern portion of the PSA, including areas within the proposed limits of disturbance, are located in Zone AE with a BFE of 747, based on current FEMA FIRMs (Figure 5-7). The proposed action would result in the grading/filling of approximately 19.62-acres of floodplain for the proposed airport construction.

In order to maintain compliance with the NFIP, it is anticipated that a Conditional Letter of Map Revision (CLOMR) will be necessary for the proposed project. In order to support this CLOMR, continued coordination with the City of Oak Ridge floodplain administrator shall be necessary. The process for applying for a CLOMR includes the completion of a MT-2 Application, digitally available through FEMA. The USACE Hydrologic Engineer Center’s River Analysis System (HEC-RAS) engineer software shall be utilized to model the existing and proposed conditions to quantify the impacts to the SFHA once a near-complete design is available. The MT-2 application and all associated engineering analyses shall be submitted to FEMA through the Online Letter of Map Change (LOMC) portal. This CLOMR process includes a thorough technical review through FEMA and a public notice period. Construction within the SFHA shall not commence until a determination for the CLOMR is issued. Once construction completes, a follow-up Letter of Map Revision (LOMR) shall be completed using as-built conditions that will yield a revision to the effective FIRM.

**Table 5-14 Summary of Significant Encroachment Floodplain Analysis**

DOT Order 5650.2 Factors to Consider	Effect of the Proposed Action
<b>1. Impacts on Human Life &amp; Transportation Facilities</b>	
Would flooding affect airport or facility access roads thereby preventing people from entering or exiting the area?	No. The Proposed Action would include a stormwater management system that retains flood storage on the airport. Nearby roads and airport access would not be affected.
Would flooding affect aviation safety and the airport or facility's use?	No. The Proposed Action would include a stormwater management system that retains flood storage on the airport. Aviation safety and facility use would not be negatively affected.
Would flooding cause flood-induced spills of hazardous material stored at the airport and cause impacts on human populations?	No. Hazardous materials are not stored at the airport. There would be no possibility of flood-induced spills of hazardous materials as a result of the Proposed Action.
<b>2. Impacts to Natural and Beneficial Values of Floodplains</b>	
<b>Agriculture and Aquaculture:</b> Will the floodplain's ability to sustain agriculture or aquaculture be eliminated?	No. The PSA does not currently support significant agriculture or aquaculture uses.
<b>Aquatic or Terrestrial Organisms:</b> Will such organisms within the floodplain be adversely displaced with substantial loss, reduction, degradation, disturbance, or fragmentation of habitat?	No. The surrounding area does not currently contain suitable or sufficient breeding, nesting, nursery or refugia habitats for most types of wildlife species including aquatic or semi-aquatic organisms. Any organisms displaced by the Proposed Action footprint will readily have access to similar supporting habitats.
<b>Flood Control:</b> Will the floodplain's capacity to carry and store floodwaters be reduced?	Yes. Any adverse impacts to the SFHA shall be quantified during the CLOMR process. Once construction completes, the effective Flood Insurance Study (FIS) and associated FIRMs shall be revised through a LOMR based on as-built conditions.
<b>Groundwater Recharge and Water Quality:</b> Would the floodplain's ability to provide for groundwater recharge or maintain water quality be compromised?	No. The Proposed Action would include a stormwater management system that retains flood storage on the airport. The system also collects and treats increased stormwater runoff resulting from the additional impervious surfaces generated. Water quality standards would be maintained.
<b>Indirect Floodplain Impacts:</b> Will indirect floodplain impacts substantially reduce the floodplain's capacity to sustain the above listed values?	No. The Proposed Action would include a stormwater management system that would retain flood storage on the airport. Indirect impacts are not anticipated.

Source: Significant Floodplain Encroachment under DOT Order 5650.2 and factors to consider established in FAA Order 1050.1F and FAA 2020 Order 1050.1F Desk Reference

5.12.4d Environmental Consequences of the No Action Alternative

The no-action alternative will result in no construction of the proposed airport; however, the pond located in this portion of the site would likely still be filled. Therefore, floodplain impacts would potentially still occur with the No Action Alternative.

5.12.4e Environmental Consequences of the Proposed Action

The Proposed Action alternative would result in the construction of the proposed airport. In order to construct the proposed airport, there would be a direct impact to 19.62 acres of floodplain due to the placement of fill material during construction. There would be no other significant indirect or cumulative impacts to floodplains due to the implementation of the proposed action. Early coordination was conducted with the COR Floodplain Manager, Matt Widner, and he stated he was aware of the proposed airport project and is fully in support of its development. A copy of his response is provided in Appendix E.

5.12.4f Mitigation for Floodplain Impacts

During final design, considerations shall be taken to minimize any adverse impacts to the water surface elevations or flood velocities within the SFHA. During the CLOMR process, these adverse impacts shall be clearly quantified and communicated to FEMA within the MT-2 application and review, and the effective FIS and FIRM shall be revised after completion of the follow-up LOMR. A public notice period shall take place to inform the public of potential impacts during each phase of the flood study. A stormwater management system that retains flood storage on the airport is proposed in an effort to minimize and mitigate any proposed impacts to the SFHA.

**5.12.5 Surface Waters**

Per the FAA 2020 Desk reference, surface waters include “streams, rivers, lakes, ponds, estuaries, and oceans”. In addition to discussing impacts to these resource features, this section also discusses how to assess potential impacts to water quality standards that is not otherwise captured in discussion of other water resources in this impact category.

5.12.5a Regulatory Setting for Surface Waters

Similar to Wetland Resources, surface waters receive federal protection under the CWA, Safe Drinking Water Act (SWDA), the Fish and Wildlife Coordination Act, and the Rivers and Harbors Act. In addition to regulating direct impacts and/or modifications to surface waters, the CWA and SWDA also set standards for maintaining water quality within surface waters. This impact category is provided further protections by state statutes, as described below.

The Tennessee Water Quality Control Act of 1977 authorized TDEC to facilitate the federal National Pollutant Discharge Elimination System (NPDES) program. This program was developed to reduce the discharge of pollutants to creeks, rivers, and lakes by means of a permitting process. The most common in Tennessee is the Construction Stormwater Permit, also referred to as NPDES Stormwater Construction Permit or General Construction Permit (CGP). This permit is obtained from the TDEC Division of Water Resources. It is required for all construction projects involving clearing, grading, or excavation resulting in the disturbance of one or more

acres. It may also apply to projects that would result in the disturbance of less than an acre, if it is part of a larger development.

Similar to the CGP, the Tennessee ARAP permit (which also applies to Wetland Resources) is part of the federal NPDES program that has been developed to reduce the discharge of pollutants into bodies of water. TDEC Division of Water Resources facilitates applications and approvals for this permit. An ARAP is necessary for construction projects that will require the alteration of a stream, river, lake, or wetland.

#### 5.12.5b Significance Threshold for Surface Waters

FAA Order 1050.1F indicates the threshold for significant impacts to Surface Waters will occur if the Proposed Action would:

- Exceed water quality standards established by federal, state, local, tribal agencies; or
- Contaminate public drinking water supply such that public health may be adversely affected.

In addition to these thresholds, FAA Order 1050.1F provides factors to consider when evaluating potential impacts to surface waters. These factors are not intended to be thresholds and, should one or more of the factors exist, that does not automatically imply a significant impact for NEPA review. The FAA will evaluate the context and intensity of the given factors in light of context and intensity to determine if impacts are significant. These factors include, but may not be limited to, situations in which the Proposed Action may have the potential to a) adversely affect natural and beneficial water resource values to a degree that substantially diminishes or destroys such values; b) adversely affect surface waters such that the beneficial uses and values of such waters are appreciably diminished or can no longer be maintained and such impairment cannot be avoided or satisfactorily mitigated; or c) present difficulties based on water quality impacts when obtaining a permit or authorization.

#### 5.12.5c Analysis of Surface Waters

As stated in Section 5.12.3c, a Jurisdictional Waters report, which is provided in Appendix D, was completed for the PSA by S&ME and a preliminary JD and approved JD was obtained for the delineated aquatic resources. Table 5-15, Table 5-16, and Table 5-17 below summarize the surface waters delineated on site.

**Table 5-15 Delineated Open Waters**

<b>Name</b>	<b>Acres</b>
OW1	11.50
OW2	0.15
OW3	0.03
OW4	0.30
<b>Total</b>	<b>11.98</b>

**Table 5-16 Delineated Streams**

<b>Name</b>	<b>Length (LFT)</b>
S1	114
S2	558
S3	141
S4	4,030
S5	1,274
S6	387
S7	1,247
S8	276
S9	1,646
S10	390
S11	135
S12	448
S13	201
S14	154
S15	1,817
S16	195
S17	63
<b>Total</b>	<b>13,076</b>

**Table 5-17 Delineated WWC/ES's**

<b>Name</b>	<b>Length (LFT)</b>
WWC/ES 1	47
WWC/ES 2	100
WWC/ES 3	120
WWC/ES 4	82
WWC/ES 5	93
WWC/ES 6	320
WWC/ES 7	104

WWC/ES 8	94
WWC/ES 9	359
WWC/ES 10	68
<b>Total</b>	<b>1,386</b>

The Approved JD determined that each of the WWC/ES's were non-jurisdictional due to the ephemeral flow regime and that OW4 was non-jurisdictional due to being an artificial pond constructed entirely in uplands. Therefore, these features are not jurisdictional under the Navigable Waters Projection Rule of the Clean Water Act.

The Proposed Action would include the clearing of trees and grading activities within the proposed airport boundary impacting surface waters. Therefore, an analysis to determine if these impacts are significant is necessary. Table 5-18 provides a summary of the thresholds and factors to consider when performing an analysis of impacts to this category, as described in Exhibit 4-1 of the 2020 Desk Reference.

**Table 5-18 Summary of Surface Water Analysis**

FAA Threshold or Factor	Effect of the Proposed Action
<b>Threshold:</b> The Proposed Action will exceed established water quality standards.	The Proposed Action would include a stormwater management system that collects and treats stormwater runoff resulting from the additional impervious surfaces generated. Water quality standards would be maintained.
<b>Threshold:</b> The Proposed Action would contaminate public drinking water supply and public health may be affected.	The Proposed Action would include a stormwater management system that collects and treats stormwater runoff resulting from the additional impervious surfaces generated. No effects to the public drinking water supply would be generated.
<b>Factor:</b> Natural and beneficial water resource values will be substantially diminished or destroyed by effects from the Proposed Action	The Proposed Action would include a stormwater management system that collects and treats stormwater runoff before discharge into natural water resources. No substantial impacts to water resource values are anticipated.
<b>Factor:</b> The Proposed Action would impact beneficial uses and values of surface waters so that they are appreciably diminished or can no longer be maintained. This impairment cannot be avoided or satisfactorily mitigated.	The Proposed Action would include a stormwater management system that collects and treats stormwater runoff before discharge into natural water resources. No substantial impacts to water resource values are anticipated.

---

<p><b>Factor:</b> The Proposed Action will present difficulties due to water quality impacts when obtaining a permit or authorization.</p>	<p>The Proposed Action includes common construction activities and subsequent facilities that are designed in compliance with federal and state standards. No difficulties are anticipated in obtaining necessary permits.</p>
--	--

---

*Source: Significance Thresholds and factors to consider established in FAA Order 1050.1F and FAA 2020 Order 1050.1F Desk Reference*

5.12.5d Environmental Consequences of the No Action Alternative

The No-Action alternative will result in no construction of the proposed airport; however, the pond located in the southwest portion of the site would likely still be filled through a CERCLA action of the DOE. Therefore, surface water impacts would potentially still occur with the No Action Alternative.

5.12.5e Environmental Consequences of the Preferred Alternative

The Proposed Action includes direct impacts to surface waters associated with the placement of fill materials into surface waters that are regulated by the USACE and/or TDEC. Direct impacts within the construction footprint will potentially result in impacts to 5,086 linear feet of jurisdictional streams and 1.90-acres of jurisdictional open waters (Figure 5-8).

5.12.5f Avoidance and Minimization of Surface Water Impacts

Avoidance and minimization of impacts to surface waters have been considered, however, due to the necessary grading for the construction of the proposed airport, impacts cannot be completely avoided. However, due to modifications to the proposed layout and location of the proposed airport within the proposed airport property boundary, impacts to surface waters have been minimized as much as possible. Throughout final design, the City of Oak Ridge will continue to work closely with TDEC and the Corps of Engineers to implement additional avoidance and minimization alternatives.

During the construction phase, appropriate soil erosion and sediment control devices, BMPs, etc. will be used. With the implementation of these measures, surface water impacts are not expected to exceed significance thresholds.

5.12.5g Consultations, Permits, and Other Approvals for Surface Water Impacts

The U.S. Army Corps of Engineers (USACE) has regulatory responsibilities pursuant to Section 404 of the Clean Water Act (33 U.S.C. 1344) and Section 10 of the Rivers and Harbors Act of 1899 (33 U.S.C. 403). Under Section 10, the USACE regulates any work in, or affecting, navigable waters of the U.S. It appears the review area does not include navigable waters of the U.S. and would not be subject to the provisions of Section 10. Under Section 404, the USACE regulates the discharge of dredged and/or fill material into waters of the U.S. Based on estimated impacts, the Proposed Action would require obtaining a Section 404 individual permit and TDEC would require an individual ARAP permit.

Staff within the Division of Water Resources has also reviewed the proposed development plan of the new airport. Since the grading, clearing, etc. will disturb well more than one acre of land and owing to the size of the project, an individual stormwater construction permit will be required. In addition, the airport will fall under requirements for the NPDES Tennessee Multi Sector Permit (TMSP) such that a Storm Water Pollution Prevention Plan (SWPPP) will have to be developed as well.

#### 5.12.5g Mitigation for Surface Water Impacts

In addition to obtaining the necessary permits, the impacts to the jurisdictional surface waters would be mitigated through credit purchases from an approved mitigation bank and/or through the implementation of a permittee responsible mitigation plan. No mitigation would be required to the impacts to the non-jurisdictional surface waters. However, impacts (and therefore mitigation) could be reduced if impacts are reduced as design progresses toward final design.

### **5.13 Cumulative Impacts**

Cumulative Impacts are impacts the Proposed Action would have on a particular resource when added to impacts on that resource due to past, present, and reasonably foreseeable actions within a defined time and geographical area. The FAA 2020 Desk Reference provides guidance for analyzing Cumulative Impacts indicates that cumulative impact analysis is resource specific and generally addresses environmental resources, ecosystems or human community impacts resulting from the Proposed Action. The 2020 Desk Reference also indicates that the analysis should consider qualitatively the impacts related to the sustainability of environmental resources, ecosystems or human communities. Mitigation identified for the Proposed Action should also be documented in the cumulative analysis section for each topic analyzed. The guidance indicates that the cumulative analysis should focus on meaningful impacts, not inconsequential ones.

For each environmental resource category analyzed in this EA, cumulative effects were considered. Table 5.13 provides a list of the categories that were analyzed. Part of this analysis was the potential for cumulative impacts to exceed applicable significance threshold for the resource analyzed, when considering the Proposed Action combined with past, present, and reasonably foreseeable future actions. The Water Resources is the only environmental impact category that has the potential for cumulative impacts that could trigger the significance threshold for the resource analyzed.

After thorough review, the Proposed Action is not anticipated to have any significant cumulative impacts due to past actions or foreseeable future actions having impacts in the projects geographical area within the time of the project. The only identified planned future actions in the project area are additional airport improvements within the existing airport boundary.

## CHAPTER 6 CORRESPONDENCE AND PUBLIC INVOLVEMENT

### 6.1 Agency Coordination Summary

Early coordination with applicable federal, state and local regulatory and commenting agencies was initiated for this EA process. Thorough site inspections and the use of web-based investigative resources were also implemented. This combined effort assisted in the identification of potential environmental resources that may exist within the project area. Table 6-1, below, provides a list of agencies associated with regulation or oversight of the various environmental impact categories to be assessed. Each was sent a scoping letter requesting comments regarding the Proposed Action. A summary of any associated response is also provided. Appendix E contains the full correspondence submitted and the agency responses.

Goodwyn Mills Cawood, LLC. (GMC) conducted agency coordination with interested parties and received correspondence from the following.

**Table 6-1 Agency Coordination**

AGENCY CONTACTED	AGENCY REPRESENTATIVE	DATE OF LETTER SENT	DATE RESPONSE RECEIVED
Natural Resources Conservation Service	Gene Robinson	July 26,2021	---

## CHAPTER 7 LIST OF PREPARERS

### Goodwyn Mills Cawood (GMC) – Prime Consultant

#### **Gary Brown, CPESC, LEED Green Associate**

Environmental Scientist/NEPA Specialist

#### CAREER SUMMARY

Gary has more than 15 years of experience as an environmental scientist working on numerous projects for both the private sector and government agencies. His experience includes working through the NEPA process from Categorical Exclusions to Environmental Impact Statements; Phase I and Phase II site assessments; erosion and sediment control; and stream and wetland delineation, permitting, restoration, and mitigation. Gary has managed and participated in numerous NEPA studies and documents for the Federal Aviation Administration (FAA), the Federal Highway Administration (FHWA), the Alabama Department of Transportation (ALDOT), the South Carolina Department of Transportation (SCDOT), the United States Department of Agriculture (USDA), the Environmental Protection Agency (EPA), the Federal Energy Regulatory Commission (FERC), the National Park Service (NPS) the U.S. Economic Development Administration (EDA), and the U.S. Department of Housing and Urban Development (HUD). Gary is also proficient in navigating the permitting processes for the United States Army Corps of Engineers (USACE), the Environmental Protection Agency (EPA), the Alabama Department of Environmental Management (ADEM), the Tennessee Department of Environment and Conservation (TDEC), the Georgia Soil and Water Conservation Commission (GSWCC), and the South Carolina Department of Health and Environmental Control (SCDHEC), including the SCDHEC Office of Ocean and Coastal Resource Management (OCRM).

#### **Mark Paslick**

Aviation Planning Manager

#### CAREER SUMMARY

Over the past 30 years, Mr. Paslick has been providing aviation consulting services to hundreds of airport boards and authorities throughout the US. The breadth and depth of his experience includes NPIAS application, feasibility studies, master plans, environmental assessments, noise analysis, aviation activity forecasts, site feasibility and selection studies, airport design, terminal area layouts, obstruction analysis, and airport layout plans. Additionally, he has aided in land acquisitions and on federal and state funding applications. As a planner, Mr. Paslick has written and developed planning documents for every new general aviation airport constructed in FAA's Memphis District over the past 25 years. He has supervised numerous airport design and construction projects from small runway overlays to the design and construction of several new general aviation airports.

**Matt Thomason, AICP, CM, PE**

Aviation Planning Leader/Project Manager

**CAREER SUMMARY**

Matt is an Engineer and Aviation Planner, and he holds a Master of Science in Airport Planning and Management from Cranfield University in Bedfordshire, United Kingdom. His extensive background includes work for airports such as Houston George Bush Intercontinental, Anchorage International Airport, Las Vegas McCarran International Airport, Jacksonville International Airport, Kona International Airport, Gainesville Regional Airport, Lynchburg Regional Airport, Brunswick Golden Isles Airport, and Ocala International Airport among others. His expertise lies in Airport Master Plans, Airport Layout Plans, Airspace Analysis and Planning, TERPS Analysis, Agency Coordination, Public Involvement, Airport Design, Airport Operations (Part 139), Crisis Communication, as well as, Airport Safety Management Systems.

Oak Ridge, Roane County, Tennessee  
S&ME Project No. 4143-20-082

Dear Robbie, Dillon, and Della,

S&ME, Inc. (S&ME) is submitting this report to present the results of the threatened and endangered (T&E) species review completed by S&ME in April 2021 on approximately 475 acres of land northwest of the Oak Ridge Turnpike near the intersection with Blair Road in Oak Ridge, Roane County, Tennessee. The property is proposed for the development of the Oak Ridge Airport, and portions of the site were previously used for Department of Energy (DOE) operations. The Endangered Species Act of 1973 (ESA) mandates all federal departments and agencies to conserve listed species and to utilize their authorities in furtherance of the purposes of the ESA. Since approval and funding from federal and state agencies will be required, consultation with the U.S. Fish and Wildlife Service (USFWS) and state agencies (i.e., Tennessee Wildlife Resources Agency (TWRA) and Tennessee Division of Natural Areas (TDNA)) is being performed.

S&ME is providing this T&E Species Evaluation report for your review and requests that the USFWS, TWRA, and TDNA provide letters of comments at your earliest convenience. If you have any questions regarding this report, please feel free to contact us.

Sincerely,

**S&ME, Inc.**

## 1.0 Project Description

The City of Oak Ridge (the City) proposes to construct a new airport on approximately 475 acres of land northwest of the Oak Ridge Turnpike near the intersection with Blair Road in Oak Ridge, Roane County, Tennessee (Figure 1). Portions of the site were previously used for Department of Energy (DOE) operations for the K-25 uranium enrichment facility site, which the DOE has been working for more than 10 years to reclaim for industrial use. The proposed project is located in the area now known as the Heritage Center Industrial Park. The proposed airport will assist in the revitalization of the industrial park and the City anticipates that it will prove to be an economic generator bringing jobs and visitors from around the country to the region.

Since an Environmental Assessment (EA) is required for the project due to federal funding and review by the Federal Aviation Administration (FAA), S&ME is submitting this letter on behalf of the civil engineer for the project (i.e., Goodwyn Mills Cawood) and the City requesting that the U.S. Fish and Wildlife (USFWS), Tennessee Wildlife Resources Agency (TWRA), and Tennessee Department of Environment and Conservation (TDEC) Division of Natural Areas (TDNA) perform a review of the site with respect to the known presence of rare, threatened, or endangered (T&E) species. S&ME has performed a preliminary desktop review of potential T&E species that may exist at or near the site and performed a site visit to evaluate potential habitat conditions. The information collected by S&ME with regard to potential protected species is described below.

## 2.0 Literature and Database Review

The property is located on a portion of the U.S. Geological Survey (USGS) Quadrangle maps for Elverton and Bethel Valley, Tennessee (Figure 1), and the latitude and longitude near the center of the site are 35.932520°N, - 84.380392°W. According to the topographic map (Figure 1), and the TDEC stream database and NWI map (Figure 2), the Clinch River and Poplar Creek embayment flow across the southwestern portion of the site; one additional blue-line stream flows to the northwest near the center of the project area. Three additional open-water areas are also shown on the topographic and NWI maps near the southwestern corner. Field verification by S&ME confirmed the presence of the features shown on the topographic, NWI, and TDEC database maps; however, multiple other streams and wetlands not identified during the database review were also delineated throughout the site.

The entire site drains to the 8-digit Lower Clinch River watershed (06010207), and the majority of the site drains to the 12-digit Hydrologic Unit Code (HUC) Poplar Creek Lower watershed (060102070303). However, the northeastern-most corner where trees will be cleared for the runway protection zone (RPZ) drains to the East Fork Poplar Creek 12-digit HUC watershed (060102070302). The entire site is also located within the Southern Limestone/Dolomite Valleys and Low Rolling Hills (67f) ecoregion.

S&ME reviewed the USFWS online database (i.e., the Information, Planning, and Conservation (IPaC) decision support system, attached) and the TDNA rare species by quadrangle database to determine if T&E species, designated critical habitat, proposed critical habitat, Migratory Birds of Conservation Concern (MBCC), or other

natural resources of concern may be affected by development activities at the site. As listed in Table 2-1 below, several federally- and state-protected species are listed within the vicinity of the project site; however, the site is not located within designated critical habitat for any species.

**Table 2-1– FEDERAL AND STATE PROTECTED SPECIES LIST**

<b>Common Name</b>	<b>Scientific Name</b>	<b>Species Type</b>	<b>Protection Status</b>
Gray bat	<i>Myotis grisescens</i>	Mammal	Federal & State Endangered
Indiana bat	<i>Myotis sodalis</i>	Mammal	Federal Endangered
Northern long-eared bat	<i>Myotis septentrionalis</i>	Mammal	Federal Threatened
Southern bog lemming	<i>Synaptomys cooperi</i>	Mammal	State Deemed in Need of Management
Long-tailed shrew	<i>Sorex dispar</i>	Mammal	State Deemed in Need of Management
Slender chub	<i>Erimystax cahni</i>	Fish	Federal Threatened
Spotfin chub	<i>Erimonax monachus</i>	Fish	Federal Threatened
Yellowfin madtom	<i>Noturus flavipinnis</i>	Fish	Federal Threatened
Tangerine darter	<i>Percina aurantiaca</i>	Fish	State Deemed in Need of Management
Tennessee dace	<i>Chrosomus tennesseensis</i>	Fish	State Deemed in Need of Management
Flame chub	<i>Hemitremia flammea</i>	Fish	State Deemed in Need of Management
Valley flame crayfish	<i>Cambarus</i>	Crustacean	State Endangered
Hellbender	<i>Cryptobranchus alleganiensis</i>	Amphibian	State Endangered
Four-toed salamander	<i>Hemidactylium scutatum</i>	Amphibian	State Deemed in Need of Management
Green salamander	<i>Aneides aeneus</i>	Amphibian	Rare, Not State Listed
Alabama lampmussel	<i>Lampsilis virescens</i>	Mussel	Federal & State Endangered
Cracking Pearlymussel	<i>Hemistena lata</i>	Mussel	Federal Endangered
Dromedary pearlymussel	<i>Dromus dromas</i>	Mussel	Federal Endangered
Fanshell	<i>Cyprogenia stegaria</i>	Mussel	Federal & State Endangered
Finerayed pigtoe	<i>Fusconaia cuneolus</i>	Mussel	Federal & State Endangered

**Table 2-1– FEDERAL AND STATE PROTECTED SPECIES LIST (CONTINUED)**

Orangefoot pimpleback	<i>Plethobasus cooperianus</i>	Mussel	Federal & State Endangered
Pink mucket	<i>Lampsilis abrupta</i>	Mussel	Federal & State Endangered
Pyramid pigtoe	<i>Pleurobema rubrum</i>	Mussel	State Rare, Not Listed
Ring pink	<i>Obovaria retusa</i>	Mussel	Federal & State Endangered
Rough pigtoe	<i>Pleurobema plenum</i>	Mussel	Federal Endangered
Rough Rabbitsfoot	<i>Quadrula cylindrica strigillata</i>	Mussel	Federal & State Endangered
Sheepnose mussel	<i>Plethobasus cyphus</i>	Mussel	Federal & State Endangered
Shiny pigtoe	<i>Fusconaia cor</i>	Mussel	Federal & State Endangered
Spectaclecase	<i>Cumberlandia monodonta</i>	Mussel	Federal & State Endangered
White wartyback	<i>Plethobasus cicatricosus</i>	Mussel	Federal Endangered
Anthony’s riversnail	<i>Athearnia anthonyi</i>	Snail	Federal Endangered
Spiny riversnail	<i>Io fluviialis</i>	Snail	State Rare, Not State Listed
Virginia spiraea	<i>Spiraea virginiana</i>	Plant	Federal Threatened
White fringeless orchid	<i>Platanthera integrilabia</i>	Plant	Federal Threatened
Northern bush-honeysuckle	<i>Diervilla lonicera</i>	Plant	State Threatened
Spreading false-foxglove	<i>Aureolaria patula</i>	Plant	State Special Concern
Schreber’s aster	<i>Eurybia schreberi</i>	Plant	State Special Concern
Mountain honeysuckle	<i>Lonicera dioica</i>	Plant	State Special Concern
Tall larkspur	<i>Delphinium exaltatum</i>	Plant	State Endangered
Fen orchid	<i>Liparis loeselii</i>	Plant	State Threatened
American ginseng	<i>Panax quinquefolius</i>	Plant	State Listed Special Concern
Butternut	<i>Juglans cinerea</i>	Plant	State Threatened
Small-headed rush	<i>Juncus brachycephalus</i>	Plant	State Special Concern
Nuttall’s waterweed	<i>Elodea nuttallii</i>	Plant	State Special Concern
River bulrush	<i>Bolboschoenus fluviatilis</i>	Plant	State Special Concern

**Table 2-1– FEDERAL AND STATE PROTECTED SPECIES LIST (CONTINUED)**

Mountain witch-alder	<i>Fothergilla major</i>	Plant	State Threatened
Tubercled rein-orchid	<i>Platanthera flava var. herbiola</i>	Plant	State Threatened
Heller’s catfoot	<i>Pseudognaphalium helleri</i>	Plant	State Special Concern
Branching whitlow-grass	<i>Draba ramosissima</i>	Plant	State Special Concern
Earleaved false-foxglove	<i>Agalinis auriculata</i>	Plant	State Endangered
Naked-stem sunflower	<i>Helianthus occidentalis</i>	Plant	State Special Concern
Slender blazing-star	<i>Liatris cylindracea</i>	Plant	State Threatened
Prairie goldenrod	<i>Oligoneuron album</i>	Plant	State Endangered
Shining ladies’ tresses	<i>Spiranthes lucida</i>	Plant	State Threatened
Northern pinesnake	<i>Pituophis melanoleucus melanoleucus</i>	Reptile	State Threatened
Eastern slender glass lizard	<i>Ophisaurus attenuates longicaudus</i>	Reptile	State Deemed in Need of Management
Bachman’s sparrow	<i>Peucaea aestivalis</i>	Bird	State Endangered

Swainson’s warbler	<i>Limnothypis swainsonii</i>	Bird	State Deemed in Need of Management
Heron rookery	Rookery	Bird Assemblage	Rare, Not State Listed

S&ME searched online sources (e.g., NatureServe ([www.natureserve.org](http://www.natureserve.org))) for information regarding the listed species to determine if they may be present at the project site and if so, if the project may affect the species. The findings of the species review and the field review to identify listed species and/or potential habitat are detailed below.

### 3.0 Field Review

S&ME personnel visited the site in late March/early April 2021 to locate and delineate jurisdictional waters and potential T&E species concerns within the project area. The primary site-development area is bordered by Burchfield Road and the Poplar Creek Embayment to the southwest, Oak Ridge Turnpike to the south/southeast, forest to the north/northeast/northwest, and the K-25 Site footprint to the west. The surrounding area is primarily forest on all sides except for the north, which consists of the K-25 Site that is currently in the demolition, cleanup, and redevelopment stages. Eight small polygonal areas are also located to the southwest and northeast of the primary airport site. These areas will require tree clearing within the proposed runway protection zone; these areas are surrounded by mature forest.

Due to historical use of the site, the southwest third of the site is comprised of buildings, pavement, roads, utilities, stormwater ponds, and lawn. The remainder of the site consists of mature and successional forest transected by roads, cleared powerline easements, and church/cemetery grounds. Typical trees within the forest include various red and white oaks (*Quercus* sp.), maples (*Acer* sp.), hackberry (*Celtis occidentalis*), loblolly pine (*Pinus taeda*), hickory (*Carya* sp.), American beech (*Fagus grandifolia*), sweetgum (*Liquidambar styraciflua*), eastern red cedar (*Juniperus virginiana*), black cherry (*Prunus serotina*), redbud (*Cercis canadensis*), dogwood (*Cornus florida*), and elms (*Ulmus* sp.). Trees along the ponds and wetlands include sycamore (*Platanus occidentalis*), black willow (*Salix nigra*), and bald cypress (*Taxodium distichum*). Understory shrubs include tree saplings of the previously-mentioned species, privet (*Ligustrum sinense*), honeysuckle (*Lonicera maackii*), fire cherry (*Prunus pensylvanica*), spicebush (*Lindera benzoin*), coralberry (*Symphoricarpos orbiculatus*), and silky dogwood (*Cornus amomum*).

Multiple habitat types are located within the project area, including mature and successional deciduous and pine forest, grassland, riparian areas, wetlands, and ponds. Poplar Creek borders the site to the west but will not be impacted by the proposed project. The streams that may be impacted by the project consist of small drainages that are mostly intermittent, with a few low-flowing perennial streams also present. The findings of the field habitat survey and the potential for listed T&E species are detailed below, and representative photographs are attached (Figure 3).

### **Mammal Species**

**Gray Bat:** The gray bat is the largest member of *Myotis* weighing between seven and 16 grams and is distinguished from other bats by the dark gray fur on the back. After the gray bat molts in July or August, the dark gray fur often bleaches to a chestnut brown or russet. Additionally, the bat's wing membrane connects to its ankle instead of at the toe as in other species of *Myotis*. The gray bat lives in caves year-round with rare exceptions. During the winter, the gray bat hibernates in deep vertical caves; in summer it roosts in caves that are typically scattered along rivers in limestone karst areas, feeding on flying aquatic and terrestrial insects. Females give birth to a single pup in late May or early June. **No caves, sinkholes, or other potential gray bat habitat was observed on the project site. Therefore, S&ME does not believe that habitat for gray bat is present within the site and doesn't anticipate any adverse effects on this species.**

**Indiana Bat and Northern Long-Eared Bat:** The Indiana bat has a wingspan of about nine to 11 inches and fur that is dark brown to black. The northern long-eared (NLEB) has a wingspan of about nine to 10 inches and fur that is medium to dark brown on the back and tawny to pale brown on the underside. During winter, the bat species hibernate in humid caves or other similar structures (e.g., abandoned mines) that provide stable temperatures between 32° F and 50° F. After hibernation, they migrate to their summer habitat in wooded areas where they usually roost under the loose tree bark of dead or dying trees. During summer, males roost alone or in small groups, while females roost in larger groups of up to 100 bats or more. They also forage in or along the edges of forested areas. Based on S&ME's previous experience and current USFWS guidance, the USFWS considers any live or dead tree with loose or exfoliating bark with a diameter at breast height (DBH) greater than three inches to be potential roosting habitat for the Indiana bat and NLEB.

**Since the project site is comprised of multiple habitat types, including approximately 290 acres of pine and oak-hickory forest, meadow, open-water, and forested riparian corridors, potential habitat for Indiana bat and/or NLEB is present. According to the NLEB Final 4(d) Rule issued January 14, 2016, since the site is not located within 150 feet of a known NLEB maternity roost tree, or within 0.25 miles of a known NLEB hibernaculum, incidental take of NLEB via tree clearing or structure removal is not prohibited. Also, according to the USFWS *Conservation Strategy for Forest-dwelling Bats in Tennessee*, dated October 5, 2017 and the *Indiana Bat Sites in Tennessee Map*, dated August 16, 2019, the project site is not located within a known range of habitat for the Indiana bat. Therefore, S&ME understands that tree clearing for the project may affect but is not likely to adversely affect Indiana bat and NLEB and should not be restricted.**

**Southern bog lemming:** The southern bog lemming is a small vole, weighing 20 to 50 grams that is native to eastern North America, ranging from southern Quebec to western Minnesota, to southwestern Kansas, and east to the U.S. Atlantic coast. It has a silver-gray ventral side, with a dorsal pelage ranging in color from a chestnut to dark brown. The tail is short, barely longer than the hind foot. Preferred habitat includes sphagnum bogs and low moist places (e.g., marshy meadows, wet balds), but they also can be found in rich upland forests. **Habitat for the southern bog lemming may exist within the forested habitat at the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Long-tailed shrew:** The long-tailed shrew is a small shrew with a range extending from Nova Scotia, Canada south through eastern Tennessee and North Carolina; they are found in greatest abundance throughout the Appalachian Mountains. This species can be distinguished from other similar shrews by their more-slender body and longer tail. They have a long snout and small eyes, a dark-grey pelage with slightly paler underparts, and sharp, pointed, often-stained teeth. Habitat includes mountainous, forested areas with loose talus and amid the debris surrounding rock-slides in East Tennessee. **Habitat for the long-tailed shrew is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

### **Fish Species**

**Slender chub:** The slender chub is a small species of minnow native to the upper Tennessee River drainage, in Tennessee and Virginia. It has a maximum length of 3.7 inches, reaches a maximum age of approximately two years, and spawns in late April and early May. Its habitat includes gravel runs and riffles of medium to fairly large, usually clear, warm rivers of moderate gradient. It feeds on small snails, and immature midges, caddisflies, and mayflies. **Habitat for the slender chub is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Spotfin chub:** The spotfin chub is a ray-finned fish in the Cyprinidae family that is native to the Tennessee River watershed. It ranges in size from 2.2 to 3.5-inches and is silver in color. It prefers habitats with gravel and sand runs within medium-sized rivers. The young can also occur in slackwater habitats, including the deeper portions of rivers and reservoirs. **Habitat for the spotfin chub is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Yellowfin madtom:** Yellowfin madtom is a small, nocturnal catfish confined to the upper Tennessee River drainage in Tennessee and Virginia (and historically in Georgia). This fish has a stout, yellow body with dark mottling, specks, and four dark saddles above, and yellow to white below. A brown saddle is located in front of the dorsal fin that encloses two light spots. The fins are yellow with dark bands or mottling at the middle and near the edges. The adipose fin is nearly free from the caudal fin, and the caudal fin is straight or slightly rounded. The pectoral spine has four to 10 large teeth on the rear edge and several large teeth on the front edge. The anal fin has 14 to 16 rays. Habitat includes medium-sized and large creeks and small rivers that are unpolluted, warm or warm to cool, usually relatively unsilted, and of moderate to gentle gradient. It is usually found in slow pools and occasionally small backwaters off runs and riffles, under cover (e.g., sticks, logs, leaf litter, undercut banks, tree roots, rocks, trash) during daylight hours. During night hours, it can be found on the streambed in open, clean gravel and rubble areas away from banks and riffles. **Habitat for the yellowfin madtom is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Tangerine darter:** The Tangerine darter is a species of freshwater darter (i.e., Percidae) native to the eastern U.S. It averages six inches long, and males are usually bright orange-red, and females are yellow. It typically inhabits clear, cool streams or small rivers of the southern Appalachian Mountains with large boulders, bedrock, and gravel substrates. It is usually found in the deeper riffles and pools. **Habitat for the tangerine darter may exist within the first-order perennial streams onsite; therefore, impacts to this species resulting from development cannot be ruled out.**

**Tennessee dace:** The Tennessee Dace is a species of freshwater minnow (i.e., Cyprinidae) native to northeast Tennessee, southwest Virginia, and northwest Georgia. It has a complete lateral line, plain olivaceous to profusely-speckled with black dorsal coloration. It is typically found in small, spring-fed, first-order streams that are shaded by woody vegetation, often in silt and fine-gravel pools, or undercut banks. **Habitat for the Tennessee dace may exist within the first-order perennial streams onsite; therefore, impacts to this species resulting from development cannot be ruled out.**

**Flame chub:** The flame chub is the only member of the genus *Hemitremia*. It is a small, heavy-bodied minnow that grows to a length of three inches. It has a deep caudal peduncle and a slightly compressed body shape. The head and snout are short and blunt. Coloration of juveniles and small adults is olive green above and white below, with a pale band above the lateral stripe. During the breeding season, males develop bright red coloration in several locations of the body; males will usually have some red coloration during the remainder of the year as well. The flame chub occurs only in cold, clear waters of springs and spring-fed streams. **Habitat for the flame chub may exist within the first-order perennial streams onsite; therefore, impacts to this species resulting from development cannot be ruled out.**

### **Crustacean Species**

**Valley flame crayfish:** The valley flame crayfish is an invertebrate found in four localities in Anderson and Roane counties in Tennessee and is widespread in eastern Kentucky. It was originally thought to have a restricted range in the Clinch and Emory River drainages of northwest Tennessee but was recently collected widely (but sporadically) in central and southeastern Kentucky. The type locality of this species is a floodplain on the east of Poplar Creek, where soils consist of clays and fragments of shale. This species is a primary burrower, usually with

openings concealed by vegetation, and in open areas with high water tables. **Habitat for the valley flame crayfish may exist within the floodplain of the Poplar Creek embayment; therefore, impacts to this species resulting from development cannot be ruled out.**

### **Amphibian Species**

**Hellbender:** The hellbender salamander is a species of aquatic giant salamander native to eastern North America. It is much larger than all other salamanders in its geographic range and has a flat body and head with dorsal eyes and slimy skin. It has working lungs, but gill slits are often retained, even after maturity. Oxygen is absorbed from the water through capillaries of its side fills. It is blotchy brown or red-brown in color, with a pale underbelly. Habitat includes swift creeks and rivers, with intermittent rocks and boulders and swiftly moving water. **Habitat for the hellbender is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Four-toed salamander:** The four-toed salamander is a lungless salamander in the Plethodontidae family native to eastern North America. It has a white underbelly sprinkled with black dots, and a back varying from orange- to red-brownish with gray flanks. The posterior limbs have four toes, and the tail color is usually brighter than the back. Habitat includes sphagnum bogs, grassy areas surrounding beaver ponds, and deciduous or mixed forests rich with mosses. **Habitat for the four-toed salamander may exist around the pond on the southwestern corner of the site and within the forested areas of the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Green salamander:** The green salamander is a species of lungless salamander in the Plethodontidae family native to the Alleghenies, Cumberland Plateau, and Great Smokey Mountains. It ranges from southwestern Pennsylvania to northern Alabama and northeastern Mississippi; it has also been identified in south-central Ohio and in isolated populations in Georgia, North Carolina, and South Carolina. This salamander is small and notably flat, with green, lichen-like blotches against a darker dorsum; it is the only salamander in North America with green markings. It has squared toe-tips, large, conspicuous eyes, and a light blue to yellow ventral surface. This species is terrestrial with habitat found in damp (but not wet) crevices in shaded rock outcrops and ledges, or beneath loose bark and in cracks of standing or fallen trees. **Habitat for the green salamander may exist within the forested areas of the site; therefore, impacts to this species resulting from development cannot be ruled out.**

### **Mussel Species**

**Alabama Lampmussel:** The Alabama Lampmussel is a freshwater Cumberlandian species of mussel restricted to the Tennessee River drainage of northern Alabama and Tennessee. Historically in Tennessee, it was found in the Emory River, Roane and Morgan Counties, and Coal Creek (a tributary of the Clinch River in Anderson County). It is believed to be extirpated from the state of Tennessee and is now found only in the Paint Rock River in Alabama. This mussel grows up to 2.3 inches long and is straw-colored or greenish and smooth and shiny. **Habitat for the Alabama lampmussel is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Cracking Pearlymussel:** The cracking Pearlymussel is a freshwater mussel that exists in Tennessee and Virginia (i.e., in the Clinch, Powell, and Elk Rivers). These mussels have thin, fairly weak, elongated shells that may reach up

to 2.7 inches in height. The outer coloring of the shell varies from yellow to brown, while the interior of the shell is pale bluish white, with a purple beak cavity. This species buries itself in the sand or mud in the bottom of medium-sized, flowing rivers. They prefer relatively shallow (less than two-feet-deep) water with a moderate current.

**Habitat for the cracking pearlymussel is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Dromedary Pearlymussel:** The dromedary pearlymussel is a freshwater mussel native to the Cumberland and Tennessee River systems in Tennessee and Virginia. It is yellow-green in color with interrupted green rays on the shell. It has a white, pink, or reddish nacre and has a distinctive hump on the shell of larger individuals. Its preferred habitat is clean, fast-flowing water in substrates that contain relatively firm rubble, gravel, and stable, clean substrates. It is usually found in riffles occurring at shoals with sand and gravel and moderate current velocities, but can also be found in deeper, slower moving water in Tennessee. **Habitat for the dromedary pearlymussel is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Fanshell:** The fanshell is a freshwater mussel that is known to have breeding populations in only three rivers, the Clinch River in Tennessee and Virginia and the Green and Licking Rivers in Kentucky; there may be a small reproducing population in the Tennessee River. Remaining fanshell populations are small and geographically isolated from each other and are not considered viable. This species has a medium-sized shell, seldom exceeding 3.2 inches in length, has green rays on a light green or yellow surface ornamented with green mottling on the exterior shell and a silvery white inside surface. Characteristic habitat is medium to large rivers; it buries itself in sand or gravel in deep water of moderate current, with only the edge of its shell and its feeding siphons exposed. **Habitat for the fanshell is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Finerayed pigtoe:** The finerayed pigtoe is a freshwater mussel native to Tennessee, Alabama, and Virginia. It has a medium-sized shell that is yellow-green to light brown with numerous fine green rays. Its preferred habitat is in relatively silt-free substrates of sand, gravel, and cobble shoals of streams and rivers. Potential habitat for the finerayed pigtoe was not observed within the project area. **Habitat for the finerayed pigtoe is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Orangefoot pimpleback:** The orangefoot pimpleback is a freshwater mussel native to the Tennessee, Cumberland, and lower Ohio Rivers in the U.S. It is rounded in shape, grows up to 9.5 centimeters long, and has bumps on the posterior part of the shell; the foot is orange in live specimens. Its preferred habitat is clean, fast-flowing water in silt-free rubble, gravel, or sand of medium to large rivers. It buries itself in sand or gravel in water as deep as 29 feet, so that only the edge of its shell and its feeding siphons are exposed. **Habitat for the orangefoot pimpleback is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Pink mucket:** The pink mucket is a freshwater mussel native to the eastern U.S. It is slightly rounded and elongated with a thick, inflated, and smooth yellow-brown shell. Its preferred habitat is mud and sand and in shallow riffles and shoals swept free of silt in major rivers and tributaries. It buries itself in sand or gravel, with only

the edge of its shell and feeding siphons exposed. It can be found in water one inch to five feet deep. **Habitat for the pink mucket is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Pyramid pigtoe:** The pyramid pigtoe is a species of freshwater mussel native to large-stream segments of the Ohio River System and its tributaries, including the Tennessee and Cumberland Rivers. The shell is solid, heavy, and inflated in the umbral region, and the beak is elevated high about the hinge line and projects anterior to the rest of the shell. The nacre is typically white, but may be pink, and the periostracum is usually a reddish or chestnut brown, often with a satiny appearance. This species is typically found in medium to large rivers, and preferred habitat includes riffles and shoals in shallow water with moderate to swiftly-flowing currents. Substrates range from coarse gravel to mud and sand to depths of about four meters. **Habitat for the pyramid pigtoe is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Ring pink:** The ring pink is a medium-sized freshwater mussel native to the Ohio River basin. It has a round, moderately inflated, thick shell without rays and is yellow-green to brown in color. The color inside the shell varies from light pink to dark purple surrounded by a white border. Habitat includes gravel and sandy substrates in large rivers. **Habitat for the ring pink is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Rough pigtoe:** The rough pigtoe is a species of freshwater mussel whose range has dropped from the Ohio, Cumberland, and Tennessee River drainages down to small populations below three Tennessee River mainstem dams and the upper Clinch River in Tennessee and the Green and Barren Rivers in Kentucky. In Alabama, extant populations occupy Tennessee River tailwaters of Wilson Dam and possibly Gunter'sville Dam. This mussel is found in medium to large rivers (60 feet or wider) in sand, gravel, and cobble substrates in shoals; it buries itself in bottoms of firmly packed sand or gravel with its feeding siphons exposed. It is occasionally found on flats and muddy sand. **Habitat for the rough pigtoe is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Rough Rabbitsfoot:** The rough rabbitsfoot is a species of freshwater mussel in the Unionidae family that is native to the southeastern states, primarily Kentucky, Tennessee, Virginia, and Alabama. Primary habitat of this mussel species includes clear-flowing creeks and small- to moderately-sized rivers with sand, gravel, and cobble substrates. **Habitat for the rough rabbitsfoot is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Sheepnose mussel:** The sheepnose mussel is a species of freshwater mussel in the Unionidae family that is endemic to the Midwest and Southeast U.S. but has been extirpated throughout much of its former range or reduced to several dozen isolated populations. This species has been eliminated from two-thirds of the total number of streams from which it was historically known, but it still has a wide distribution in the Mississippi and Ohio basins. The majority of the remaining populations are small and geographically isolated. **Habitat for the sheepnose mussel is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Shiny pigtoe:** The shiny pigtoe is a freshwater mussel native to Tennessee, Alabama, and Virginia. It has a shell that is smooth and shiny with dark green or black rays on a yellow to brown background. Its preferred habitat is along fords and in shoals of clear, moderate to fast-flowing streams and rivers with stable substrates. It is not found in deeper pools or reservoirs. **Habitat for the shiny pigtoe is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Spectaclecase:** The Spectaclecase mussel is a freshwater mussel native to the central U.S.; it has been found in Alabama, Arkansas, Illinois, Iowa, Kentucky, Minnesota, Missouri, Tennessee, Virginia, West Virginia, and Wisconsin. The populations are fragmented and restricted to short stream reaches. It has an elongate, arcuate, and compressed shell with a concave ventral margin that can grow up to nine inches long. The outside of the shell is dark brown to black and rayless. The pseudocardinal teeth are poorly developed, lateral teeth are absent, and the inside of the shell is white. This species is found in large rivers, in riverine microhabitats that are sheltered from the main force of current. They are usually found in firm mud between large rocks in quiet water near the interface with swift currents. They also tend to be aggregated, particularly under slab boulders or bedrock shelves where they are protected from the current. They are also known to be essentially sessile, and may seldom, if ever, move except to burrow deeper. **Habitat for the spectaclecase is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**White wartyback:** The white wartyback is a species of freshwater mussel native to the Ohio, Cumberland, and Tennessee River systems in the eastern U.S. The mussel is yellow-green/yellow-brown in color, has a shiny and party-iridescent nacre, and a row of tubercles on one edge of the shell. This mussel is found in clean, fast-flowing water in silt-free rubble, gravel and sand bottoms of large rivers. It buries itself in sand or gravel between bedrock ledges with only the edge of its shell and feeding siphons exposed. **Habitat for the white wartyback is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

### **Snail Species**

**Anthony's riversnail:** Anthony's riversnail is a freshwater snail in the Pleuroceridae family that is native to the Tennessee River system and presently known from the extreme lower sections of only four streams (i.e., the Sequatchie and Little Sequatchie Rivers, Limestone Creek, and the Tennessee River). It has a rhomboidally ovate shell covered with an olivaceous-yellowish epidermis with two purplish bands encircling the body whorl. The body whorl is shouldered by a series of large, obtuse, and irregular tubercles, with a stained purple columellar lip above and below. Its preferred habitat appears to be larger rivers, but lower stretches of large creeks are also inhabited. It is usually found on cobble/boulder substrates in the vicinity of riffles in strongly flowing sections. **Habitat for Anthony's riversnail is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Spiny riversnail:** The spiny riversnail is a species of freshwater snail in the Pleuroceridae family, native to the Tennessee River system. It is highly variable in regard to shell morphology, but typically possesses a thick, spiny shell with a tapered, elevated spire. The whorls are somewhat convex to inflated, sutures are not impressed, and the body whorl is sculptured by wrinkled growth lines and marked by a series of spines the middle of the whorl. The periostracum is olive green to brown. Preferred habitat includes large rocks and bedrock outcrops in well-

oxygenated, shallow water with fast current. **Habitat for spiny riversnail is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

#### **Flowering Plant Species**

**Virginia spiraea:** Virginia spiraea is a shrub that has become adapted for life in the high-disturbance zone of frequently flooded stream banks and stream beds. It grows approximately 3 to 13 feet tall; has long, alternate, oblong leaves that are toothed along the edges; and produces white, showy flower clusters between May and July. It also produces clusters of small fruit pods between August and October. Its preferred habitat is rocky streams over sandstone, such as boulder stream banks, edges of waterfalls, and rock ledges. **Habitat for Virginia spiraea is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**White fringeless orchid:** The white fringeless orchid is a perennial orchid that occurs in the southeastern United States, from Texas to Virginia. It has two or sometimes three leaves on the bottom portion of its stem and produces a loose inflorescence of up to 20 showy, white flowers. The labellum lacks any fringing, and an elongated spur extends from the back of the flower and curves forward. Its preferred habitat consists of moist woodlands, riparian areas of streams, and in marshes and bogs. **Habitat for the white fringeless orchid may exist along the riparian area of the streams and wetlands within the forest on the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Northern bush-honeysuckle:** Northern bush-honeysuckle is a small shrub native to the eastern U.S., from North Dakota east to Massachusetts, and from Quebec south to Georgia and Alabama. It grows to approximately three-feet tall, and has simple, opposite leaves, two leaves per node along the stem, and toothed leaf margins. Yellow-orange, tube-like flowers bloom in late spring to early summer in a terminal cluster. Its preferred habitat is in dry, rocky, open woodland areas and thickets, forest edges, grassland, talus and rocky slopes, and disturbed habitats. Common plant communities associated with northern bush-honeysuckle include acidic-loving species such as beaked hazel, alternate-leaf dogwood, speckled alder, wintergreen, and blueberries. **Habitat for the northern bush-honeysuckle may exist along the forest edges of the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Spreading false-foxglove:** Spreading false-foxglove is a species of perennial plant in the Orobanchaceae family native to the upper southeastern U.S., where it is found in Alabama, Georgia, Kentucky, and Tennessee. It grows up to four feet in height and has yellow flowers that bloom from August to October. Habitat includes steep limestone bluffs in the shade of open stands of mixed hardwoods. **Habitat for spreading false-foxglove is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Schreber's aster:** Schreber's aster is a perennial herb in the Asteraceae family that is native to the eastern U.S. and Canada. It is mostly characterized by stands of large basal leaves, coarsely-toothed and arising from long rhizomes. It has simple leaves with toothed-edges, flower heads with tubular, white, disk flowers in the center and ray flowers along the periphery, which bloom from July to September. Its preferred habitat is in damp to mesic deciduous mixed woods, most often those with maple, elms, or oaks, as well as in thickets and shaded road banks.

**Habitat for Schreber’s aster may exist within the forested areas of the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Mountain honeysuckle:** Mountain honeysuckle is a vine in the Caprifoliaceae family that is native to Canada and the eastern and central U.S. It is a low-growing, climbing, vine-like shrub with branches arching or twining three to ten feet from the plant. It has distinctive, red, tubular flowers with yellow stamens arranged in whorls at the end of branches; red berries are produced after flowering. The leaves are opposite and deciduous, and the uppermost pair is connate. This species is typically found in mountain woods, rocky ridge tops, and thickets, as well as along borders of bogs and seepages. **Habitat for mountain honeysuckle may exist within the forested areas of the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Tall larkspur:** Tall larkspur is a perennial species of flowering plant in the buttercup family that is native to the central and eastern U.S., from Missouri east to North Carolina, and from Tennessee north to Pennsylvania. The slender, hairless stem grows from two to six feet tall, and has numerous, deeply cleft leaves with three to five wedge-shaped divisions. The flowers are bilateral and in loose wand-like racemes that have four irregular, purplish-tinted petals; it blooms from July to mid-August with fruiting occurring from mid-August to mid-September. In Tennessee habitat consists primarily of Ridge and Valley cedar barrens on thin, cherty loam over limestone. It can also be found in oak-cedar woods, mixed pine-cedar woodlands, and disturbed areas (e.g., roadsides and pastures) that mimic barrens habitat. **Habitat for tall larkspur may exist within the forested and disturbed areas of the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Fen orchid:** The fen orchid is a species of orchid in the Orchidaceae family native to Canada and the northeastern and central U.S., from the Northwest Territories to Alabama. It produces two dark-green, often glassy basal leaves and produces up to 18 small, yellowish-green flowers. The flowers have a wide, occasionally translucent labellum, narrow sepals, and tubular petals. It has a partially exposed pseudobulb at the base of its stem, which stores water. Typical habitat includes moist meadows, fens, and bogs containing high levels of calcium. **Habitat for fen orchid is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**American ginseng:** American ginseng is a herbaceous perennial plant in the ivy family (Araliaceae) that is native to much of the eastern and central U.S. and in parts of southeastern Canada. It grows six to eighteen inches tall, bears three leaves, with three to five leaflets, two to five inches long, and has an aromatic root that resembles a small parsnip that forks as it matures. Habitat includes deciduous forests of the Appalachian and Ozark regions and it is found in full shade underneath hardwoods. **Habitat for American ginseng may exist within the forested areas of the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Butternut:** Butternut is a large, deciduous, nut-bearing tree native to the central and eastern U.S. and southeastern Canada. It can reach approximately 100 feet in height, has grayish-brown, smoothly-ridged bark, and compound leaves with 11 to 17 long, pointed leaflets. It possesses dense, drooping catkins of flowers which protrude from the buds in autumn and lengthen in the spring. The cylindrical nut has two halves and two or four

ridges running end to end along the rough surface. Optimal growth of butternut occurs on well-drained soils of bottomlands and floodplains. It is shade-intolerant and grows best in full sunlight. **Habitat for butternut may exist within the forested areas of the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Small-headed rush:** Small-headed rush is an herbaceous perennial plant in the Juncaceae family native to the eastern U.S., ranging from Georgia to Quebec. It grows up to 2.5 feet tall, has a light-green to reddish green stem with one to two leaves at the base and two to three alternate leaves along the central stem. The leaf sheaths are light green to reddish green and hairless. The central stem terminates in either a simple or compound panicle of clustered flowers. Habitat includes calcareous seeps, wet meadows in fens, and wet bluffs. **Habitat for small-headed rush is not present at the project site; therefore, S&ME does not anticipate impacts to this species resulting from development.**

**Nuttall's waterweed:** Nuttall's waterweed is a perennial aquatic plant in the Hydrocharitaceae family native to the U.S. It was introduced as an aquarium plant into Europe where it is considered an invasive weed. This species is a submerged-root aquatic plant and is dioecious with floating flowers and rooting at nodes. The stems are long and slender, often freely branches with pale green, narrowly lanceolate leaves. The flower is small and no more than eight millimeters across, waxy white, with three petals and three sepals. This species has been found growing in a wide range of water bodies, including along the shorelines of lakes, reservoirs, and ponds, in rivers and streams, and also in wetlands, canals, and ditches. **Habitat for Nuttall's waterweed is present within the pond located on the southwestern corner of the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**River bulrush:** River bulrush is a species of flowering plant in the sedge family (Cyperaceae) native to most of the northern U.S., extending as far north as Canada and as far south as Alabama. This species has a loose cluster of spikes at the top of the stem with four to 12 branches, with one to eight stalkless spikelets (often two or three) at the branch tip. A papery sheath surrounds the base of each branch. Florets are perfect and have a three-parted style subtended by a single scale. The leaves are alternate and flat to V-shaped in the cross-section. Habitat includes lake shores, ponds, river banks, marshes, and moist swales. **Habitat for river bulrush is present within the pond located on the southwestern corner of the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Mountain witch-alder:** Mountain witch-alder is a deciduous shrub that grows up to 21 feet tall, is densely-branched, has wide, leathery leaves with blunt teeth on the upper 2/3 of the leaf margin, and white flowers with showy, white stamens and no petals. It is native to the southeastern United States and occurs in mixed hardwood-pine forests on dry, rocky slopes and bluffs, and moist forests. **Habitat for mountain witch-alder may exist within the forested areas of the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Tuberclad rein-orchid:** Tuberclad rein-orchid is a species of Orchid in the Orchidaceae family native to the eastern U.S., ranging from Georgia northwest to Arkansas and north to Minnesota and Nova Scotia. It is a perennial herb with an erect, hairless stem, two to five leaves per stem, and a flower cluster on a narrow spike at

the top of the stem with 15 to 40 closely packed, pale green or yellowish-green flowers. The 0.25-inch-wide flowers have similar sepals and petals, and the upper sepal and two lateral petals overlap to form a hood over the top of the flower; the species blooms between May and September. Habitat includes moist or wet meadows, the margins of shallow, marshy lakes, and swamps and floodplains. **Habitat for tubercled rein-orchid is present within the wetlands and ponds on the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Heller's catfoot:** Heller's catfoot (also known as rabbit tobacco or Heller's cudweed) is an annual species in the sunflower family (Asteraceae) native to the southeastern U.S. This species has alternate leaves that are whitish below and dark green above. The stems are green and glandular, and the white flowers are produced in heads. Habitat includes dry, sandy woods and woodland edges. **Habitat for Heller's catfoot may exist within the forested areas of the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Branching whitlow-grass:** Branching whitlow-grass is a species of plant in the mustard family (Brassicaceae) native to the Appalachian Mountains, the Kentucky River Palisades, and Middle Tennessee. It is a small perennial herb that grows up to 20 inches tall and has racemes of white flowers in the spring (April through June). Habitat includes limestone cliffs and outcrops, shale barrens, and rocky, wooded areas. **Habitat for branching whitlow-grass may exist within the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Earleaved false-foxglove:** Earleaved false-foxglove is a species of flowering plant in the broomrape family (Orbanchaceae) native to the eastern U.S., from New Jersey west to Minnesota, and throughout most southern states. It is a hairy annual herb producing a stiff stem up to 35 inches tall, with oppositely-arranged leaves, and hairy stems. The flowers are purple, have five clefts with two smaller upper lobes that are more united than the three lower ones, and purple-spotted throats; this species blooms in July and September. Habitat includes upland barrens. **No barrens or glades were observed within the project site; therefore, habitat for earleaved false-foxglove is not present, and S&ME does not anticipate impacts to this species resulting from development.**

**Naked-stem sunflower:** Naked-stem sunflower is a species in the Asteraceae family native to the eastern and central U.S. This perennial plant grows approximately two to five feet tall, produces one to several yellow flower heads, each with eight to 14 ray florets surrounding more than 50-disc florets. The basal leaves form a rosette structure and the stem shoots up from the middle of it. This species can be easily identified through its lack of leaves all the way up the stalk. Habitat includes limestone glades and barrens. **No barrens or glades were observed within the project site; therefore, habitat for naked-stem sunflower is not present, and S&ME does not anticipate impacts to this species resulting from development.**

**Slender blazing-star:** Slender or cylindrical blazing-star is an herbaceous perennial plant in the Asteraceae family native to eastern North America, ranging from Ontario south to Alabama. This species has hairless stems approximately eight to 24 inches tall. A single flower head or a loose to dense cluster of two to 28 flower heads grows at the top of the head; each flower head has 10 to 35 florets and is stemless or has a stem less than 0.5 inches long that orients the head upwards. The flowers bloom from July to September. Habitat includes full sun,

poor soil, and dry conditions, typically in barrens in Tennessee. **No barrens or glades were observed within the project site; therefore, habitat for slender blazing-star is not present, and S&ME does not anticipate impacts to this species resulting from development.**

**Prairie goldenrod:** Prairie goldenrod is a perennial herb native to the eastern U.S., from Montana east to Massachusetts, and from Quebec south to Georgia. It can reach approximately 30-inches high and has clustered stems on a woody-thickened, branched rootcrown. The entire leaves located at the base of the plant are lance-shaped and up to eight-inches long; the leaves on the upper stem are shorter, strap-shaped, and lack petioles. The three to sixty flower heads have an open, flat-topped inflorescence of white; it typically blooms July through September. The prairie goldenrod differs from others *Solidago* species in that it has white flowers and resembles an aster. Its preferred habitat is in dry, calcareous prairies, cliffs and river shores, and open woods, often on high-pH substrate. **No barrens or glades were observed within the project site; therefore, habitat for prairie goldenrod is not present, and S&ME does not anticipate impacts to this species resulting from development.**

**Shining ladies' tresses:** Shining ladies' tresses is a species in the orchid family (Orchidaceae) native to the eastern U.S., from Nova Scotia to northeastern Wisconsin, south to Missouri, and east to Virginia. It is a perennial plant that grows up to 15 inches tall, has three to four basal leaves, and produces white, flowers with a prominent brilliant yellow lip. This species blooms between May and August. Habitat includes alluvial woods and moist slopes. **Habitat for shining ladies' tresses may exist within the forested areas of the site; therefore, impacts to this species resulting from development cannot be ruled out.**

#### **Reptile Species**

**Northern pinesnake:** The northern pine snake is a large snake that can reach a length of 66 inches. They are white, yellow, or light gray with dark blotches on the back and sides that become lighter toward the tail and darker toward the head. Their range consists of primarily the southeastern US with patchy distribution. They prefer areas with open, well-drained, sandy soils within an open pine canopy and herbaceous understory. Areas with infertile sandy soil provide important habitat for construction of dens and hibernacula. It is a burrowing snake that spends most of its time underground, with activity at its highest from May to October. Its population decline is due to habitat degradation. **Habitat for northern pinesnake may exist within the pine-forested areas of the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Eastern slender glass lizard:** The eastern slender glass lizard is native to the southeast region and is the only legless lizard found in Tennessee. Glass lizards are long, slender, legless lizards that superficially resemble snakes, and they are distinguished from snakes by having movable eyelids, external ears, and small scales on the belly. The body is brownish or tan and narrow, dark, longitudinal stripes run down the sides, above and below the lateral groove, from head to tail. Habitat includes dry, open grasslands or woodlands, and it is typically found in dried grass or burrows, and occasionally in vacant lots and farms. **Habitat for eastern slender glass lizard may exist within the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Bird Species**

**Bachman’s sparrow:** The Bachman’s sparrow is five and one-half inches long with a conical bill and pale lower mandible. The crown is brown, and the face is pale with a brown streak extending behind the eye. This sparrow has a gray back, a long brown tail, and wings with brown streaks. It is a shy and secretive bird that builds its nest on the ground in clumps of grass or at the bases of bushes. **Habitat for Bachman’s sparrow may exist within the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Cerulean warbler:** The cerulean warbler is a small and compact species of warbler in the Parulidae family that is native to the southeast, migrating from as far south as South America up to the Great Lakes. The males are sky-blue above with two white-wing bars, dark streaking on the back, a thin blue neck band, and blue streaking on the sides of their white belly. Females are bluish green above with a slight yellow wash below; females also have a whitish eyebrow and two white wingbars. This species breeds in older deciduous forests with an open understory. **Habitat for cerulean warbler may exist within the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Swainson’s warbler:** Swainson’s warbler is a small species of warbler in the Parulidae family that is native to the southeast, migrating from as far south as Mexico up to Kentucky and West Virginia. These birds are small and rather nondescript, with a nine-inch wingspan, and an olive-brown upper body and pale yellow-white underbelly. They have a whitish eyebrow stripe above their eye, and the top of the head is rusty-brown. This species breeds in forests with a well-developed understory, especially bottomland hardwood forest and moist mountain ravines. **Habitat for Swainson’s warbler may exist within the site; therefore, impacts to this species resulting from development cannot be ruled out.**

**Heron rookery:** A heron rookery is a communal nesting ground for blue herons, consisting of anywhere from just a few nests to hundreds of nesting pairs in a relatively small area. In the rookery, each nest is typically independent, with parent birds caring for only their nestlings. However, the proximity of the adult birds allows for more protections, including predators being spotted more quickly, and the ability of multiple adult birds to defend the nesting area if necessary. Most rookeries are found in wetland areas or near large water bodies, in large trees or groups of trees. **No rookeries were observed within the project site; therefore, the project is unlikely to disturb nesting herons.**

**Bald eagle:** The bald eagle is a large raptor with a wingspan of approximately seven feet. The adults have a dark brown body and wings, white head and tail, and a yellow beak. Their natural range covers most of North America, including most of Canada, the continental United States, and northern Mexico. Adults typically nest in old-growth and mature stands of coniferous or hardwood trees. **S&ME reviewed the USFWS Tennessee Ecological Services Field Office Bald Eagle Nest Map on April 26, 2021, and no bald eagle nests are documented within 660 feet of the project site. However, S&ME was informed by multiple entities familiar with the K-25 plant and the project site that a bald eagle nest was historically located on Duct Island, near the southwestern area of the evaluation boundary and adjacent to the Clinch River and the Poplar Creek embayment. The current property owner representative for Duct Island said that the trees containing the eagle nest had fallen many years ago and no eagles have been observed since. S&ME did not locate any new nests or observe any**

**eagle activity during the April 2021 site visits. Therefore, the project is unlikely to disturb nesting bald eagles.**

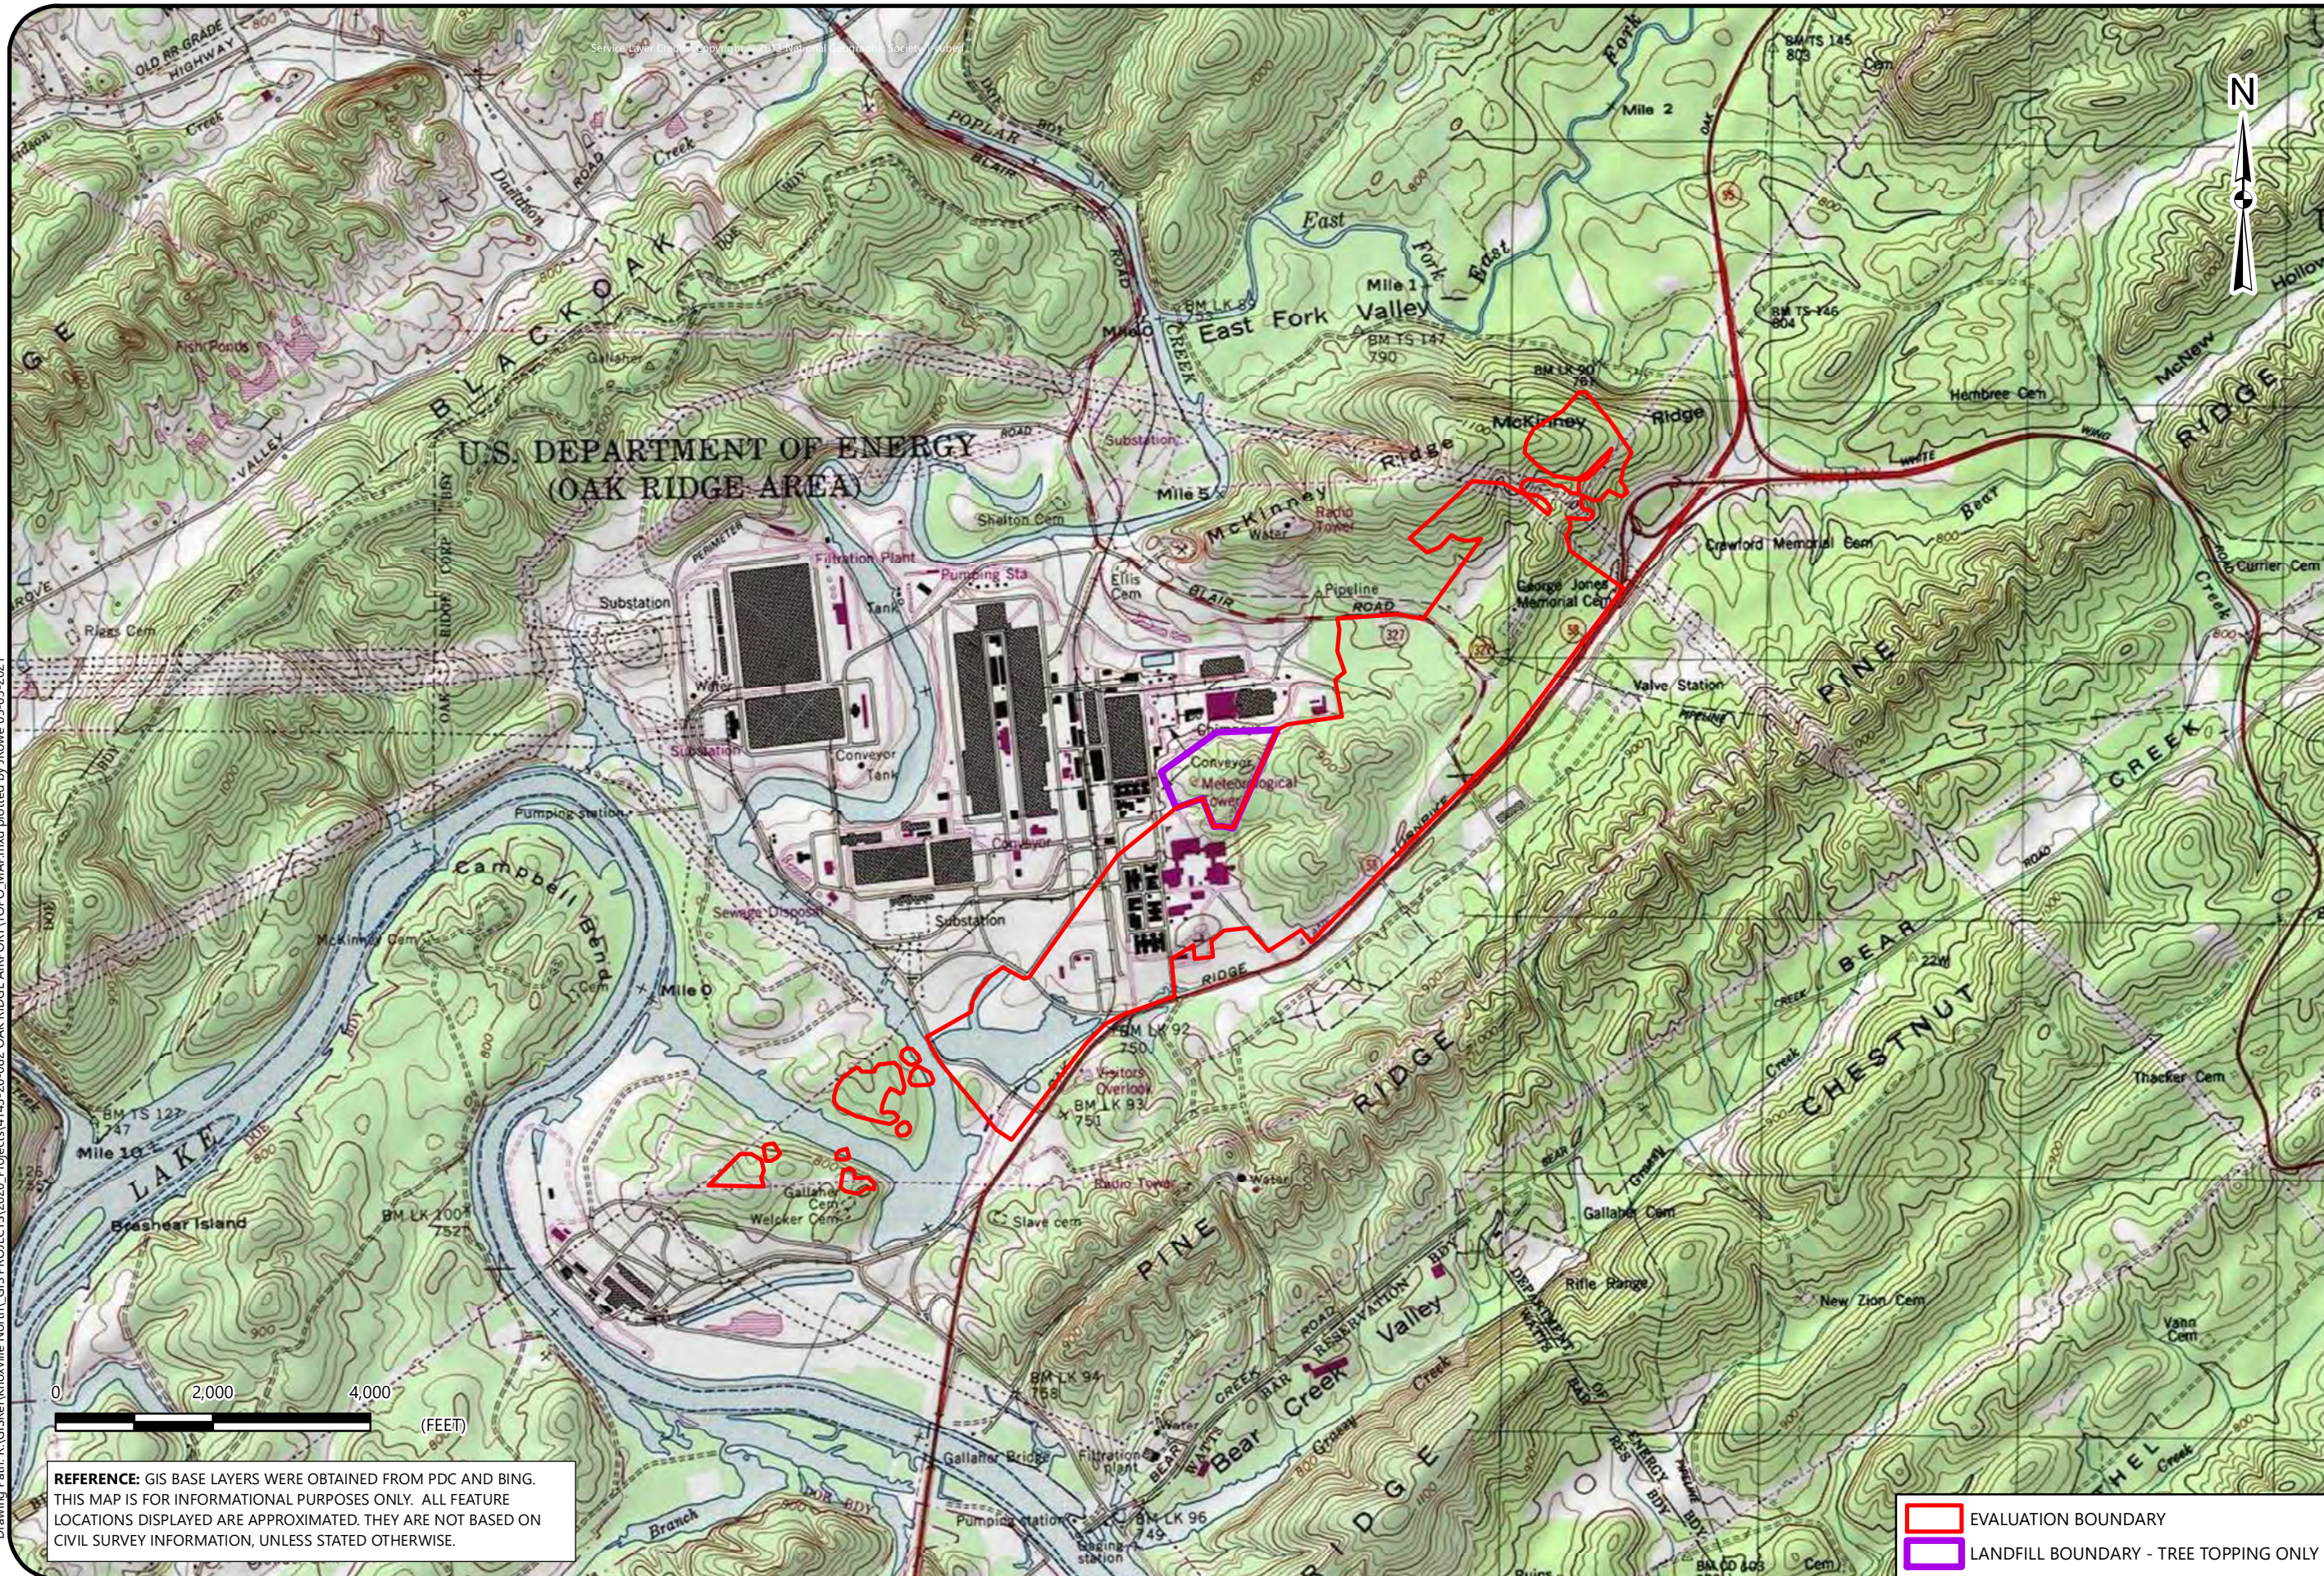

## **4.0 Conclusion**

S&ME completed a pedestrian review of the project area in April 2021 and identified appropriate habitat for multiple state- and federally-listed species. Therefore, S&ME requests comments from USFWS, TWRA, and TDNA regarding the listed species and the potential impacts due to development of the property. If you have any questions regarding this report, please call Sarah Rowe at (865)970-0003 or contact via email at [srowe@smeinc.com](mailto:srowe@smeinc.com).

## **Appendix II – Agency Coordination Letters**

**Threatened and Endangered Species**  
**Oak Ridge Airport – Environmental Assessment**

Oak Ridge, Roane County, Tennessee

S&ME Project No. 4143-20-082

**Species Conclusions Table (May 7, 2021)**

Species / Resource Name	Conclusion	Protection Status	ESA Section 7 / Eagle Act Determination	Notes / Documentation
Gray bat	No suitable habitat present.	Federal & State Endangered	No effect.	Habitat assessment indicated no potential habitat present.
Indiana bat	Potential habitat present and no current survey conducted.	Federal Endangered	May affect but not likely to adversely affect.	The project site is not located within a known range of habitat for the Indiana bat. Therefore, S&ME understands that tree clearing for the project may affect but is not likely to adversely affect Indiana bat and should not be restricted.
Northern long-eared bat	Potential habitat present and no current survey conducted.	Federal Threatened	May affect but not likely to adversely affect.	According to the NLEB Final 4(d) Rule, since the site is not located within 150 feet of a known NLEB maternity roost tree or within 0.25 miles of a known NLEB hibernaculum, incidental take of NLEB via tree clearing or structure removal is not prohibited.
Southern bog lemming	Potential habitat present and no current survey conducted.	State Deemed in Need of Management	May affect.	Habitat assessment indicated potential habitat present.
Long-tailed shrew	No suitable habitat present.	State Deemed in Need of Management	No effect.	Habitat assessment indicated no potential habitat present.
Slender chub	No suitable habitat present.	Federal Threatened	No effect.	Habitat assessment indicated no potential habitat present.
Spotfin chub	No suitable habitat present.	Federal Threatened	No effect.	Habitat assessment indicated no potential habitat present.

March 29, 2021

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

### To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)

(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

<http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF>

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan ([http://www.fws.gov/windenergy/eagle\\_guidance.html](http://www.fws.gov/windenergy/eagle_guidance.html)). Additionally, wind energy projects should follow the wind energy guidelines (<http://www.fws.gov/windenergy/>) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: <http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm>; <http://www.towerkill.com>; and <http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html>.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

## Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

**Tennessee Ecological Services Field Office**

446 Neal Street

Cookeville, TN 38501-4027

(931) 528-6481

---

## Project Summary

Consultation Code: 04ET1000-2021-SLI-0608

Event Code: 04ET1000-2021-E-01337

Project Name: Oak Ridge Airport

Project Type: TRANSPORTATION

Project Description: A new airport is proposed for the site.

Project Location:

Approximate location of the project can be viewed in Google Maps: <https://www.google.com/maps/@35.93383115,-84.37864326938221,14z>

Counties: Roane County, Tennessee

---

## Endangered Species Act Species

There is a total of 24 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries<sup>1</sup>, as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

- 
1. [NOAA Fisheries](#), also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

## Mammals

NAME	STATUS
Gray Bat <i>Myotis grisescens</i> No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/6329">https://ecos.fws.gov/ecp/species/6329</a>	Endangered
Indiana Bat <i>Myotis sodalis</i> There is <b>final</b> critical habitat for this species. The location of the critical habitat is not available. Species profile: <a href="https://ecos.fws.gov/ecp/species/5949">https://ecos.fws.gov/ecp/species/5949</a>	Endangered
Northern Long-eared Bat <i>Myotis septentrionalis</i> No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/9045">https://ecos.fws.gov/ecp/species/9045</a>	Threatened

---

## Fishes

NAME	STATUS
<p>Slender Chub <i>Erimystax cahni</i></p> <p>There is <b>final</b> critical habitat for this species. The location of the critical habitat is not available.            Species profile: <a href="https://ecos.fws.gov/ecp/species/6637">https://ecos.fws.gov/ecp/species/6637</a></p>	Threatened
<p>Spotfin Chub <i>Erimonax monachus</i></p> <p>Population: Wherever found, except where listed as an experimental population            There is <b>final</b> critical habitat for this species. The location of the critical habitat is not available.            Species profile: <a href="https://ecos.fws.gov/ecp/species/1521">https://ecos.fws.gov/ecp/species/1521</a></p>	Threatened
<p>Yellowfin Madtom <i>Noturus flavipinnis</i></p> <p>Population: Wherever found, except where listed as an experimental population            There is <b>final</b> critical habitat for this species. The location of the critical habitat is not available.            Species profile: <a href="https://ecos.fws.gov/ecp/species/8565">https://ecos.fws.gov/ecp/species/8565</a></p>	Threatened

## Clams

NAME	STATUS
Alabama Lampmussel <i>Lampsilis virescens</i> Population: Wherever found; Except where listed as Experimental Populations No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/916">https://ecos.fws.gov/ecp/species/916</a>	Endangered
Birdwing Pearlymussel <i>Lemiox rimosus</i> Population: U.S.A. (TN - specified portions of the French Broad and Holston Rivers; see 17.85(b)(1)) No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/6636">https://ecos.fws.gov/ecp/species/6636</a>	Experimental Population, Non-Essential
Cracking Pearlymussel <i>Hemistena lata</i> Population: Wherever found; Except where listed as Experimental Populations No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/4130">https://ecos.fws.gov/ecp/species/4130</a>	Endangered
Dromedary Pearlymussel <i>Dromus dromas</i> Population: Wherever found; Except where listed as Experimental Populations No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/6377">https://ecos.fws.gov/ecp/species/6377</a>	Endangered
Fanshell <i>Cyprogenia stegaria</i> No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/4822">https://ecos.fws.gov/ecp/species/4822</a>	Endangered
Finerayed Pigtoe <i>Fusconaia cuneolus</i> Population: Wherever found; Except where listed as Experimental Populations No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/3038">https://ecos.fws.gov/ecp/species/3038</a>	Endangered
Orangefoot Pimpleback (pearlymussel) <i>Plethobasus cooperianus</i> No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/1132">https://ecos.fws.gov/ecp/species/1132</a>	Endangered
Pink Mucket (pearlymussel) <i>Lampsilis abrupta</i> No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/7829">https://ecos.fws.gov/ecp/species/7829</a>	Endangered
Ring Pink (mussel) <i>Obovaria retusa</i> No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/4128">https://ecos.fws.gov/ecp/species/4128</a>	Endangered
Rough Pigtoe <i>Pleurobema plenum</i> No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/6894">https://ecos.fws.gov/ecp/species/6894</a>	Endangered
Rough Rabbitsfoot <i>Quadrula cylindrica strigillata</i> There is <b>final</b> critical habitat for this species. The location of the critical habitat is not available. Species profile: <a href="https://ecos.fws.gov/ecp/species/5629">https://ecos.fws.gov/ecp/species/5629</a>	Endangered
Sheepnose Mussel <i>Plethobasus cyphus</i>	Endangered

NAME	STATUS
No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/6903">https://ecos.fws.gov/ecp/species/6903</a>	
<b>Shiny Pigtoe <i>Fusconaia cor</i></b> Population: Wherever found; Except where listed as Experimental Populations No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/2573">https://ecos.fws.gov/ecp/species/2573</a>	Endangered
<b>Spectaclecase (mussel) <i>Cumberlandia monodonta</i></b> No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/7867">https://ecos.fws.gov/ecp/species/7867</a>	Endangered
<b>White Wartyback (pearlymussel) <i>Plethobasus cicatricosus</i></b> No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/2549">https://ecos.fws.gov/ecp/species/2549</a>	Endangered

## Snails

NAME	STATUS
<b>Anthony's Riversnail <i>Athearnia anthonyi</i></b> Population: Wherever found; Except where listed as Experimental Populations No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/4827">https://ecos.fws.gov/ecp/species/4827</a>	Endangered

## Flowering Plants

NAME	STATUS
<b>Virginia Spiraea <i>Spiraea virginiana</i></b> No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/1728">https://ecos.fws.gov/ecp/species/1728</a>	Threatened
<b>White Fringeless Orchid <i>Platanthera integrilabia</i></b> Population: No critical habitat has been designated for this species. Species profile: <a href="https://ecos.fws.gov/ecp/species/1889">https://ecos.fws.gov/ecp/species/1889</a>	Threatened

## Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

# USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the [National Wildlife Refuge](#) system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

---

## Migratory Birds

Certain birds are protected under the Migratory Bird Treaty Act<sup>1</sup> and the Bald and Golden Eagle Protection Act<sup>2</sup>.

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described [below](#).

- 
1. The [Migratory Birds Treaty Act](#) of 1918.
  2. The [Bald and Golden Eagle Protection Act](#) of 1940.
  3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

The birds listed below are birds of particular concern either because they occur on the [USFWS Birds of Conservation Concern](#) (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ [below](#). This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the [E-bird data mapping tool](#) (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found [below](#).

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
Bald Eagle <i>Haliaeetus leucocephalus</i> This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. <a href="https://ecos.fws.gov/ecp/species/1626">https://ecos.fws.gov/ecp/species/1626</a>	Breeds Sep 1 to Aug 31
Cerulean Warbler <i>Dendroica cerulea</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. <a href="https://ecos.fws.gov/ecp/species/2974">https://ecos.fws.gov/ecp/species/2974</a>	Breeds Apr 27 to Jul 20

---

NAME	BREEDING SEASON
<b>Kentucky Warbler <i>Oporornis formosus</i></b> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Apr 20 to Aug 20
<b>Prairie Warbler <i>Dendroica discolor</i></b> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 1 to Jul 31
<b>Red-headed Woodpecker <i>Melanerpes erythrocephalus</i></b> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Sep 10
<b>Rusty Blackbird <i>Euphagus carolinus</i></b> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds elsewhere
<b>Wood Thrush <i>Hylocichla mustelina</i></b> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Aug 31
<b>Yellow-bellied Sapsucker <i>sphyrapicus varius</i></b> This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA <a href="https://ecos.fws.gov/ecp/species/8792">https://ecos.fws.gov/ecp/species/8792</a>	Breeds May 10 to Jul 15

## Probability Of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

### Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.

2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is  $0.25/0.25 = 1$ ; at week 20 it is  $0.05/0.25 = 0.2$ .
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

**Breeding Season (■)**

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

**Survey Effort (|)**

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

**No Data (-)**

A week is marked as having no data if there were no survey events for that week.

**Survey Timeframe**

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Additional information can be found using the following links:

- Birds of Conservation Concern <http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php>
- Measures for avoiding and minimizing impacts to birds <http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php>
- Nationwide conservation measures for birds <http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf>

## Migratory Birds FAQ

**Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.**

[Nationwide Conservation Measures](#) describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. [Additional measures](#) or [permits](#) may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

**What does IPaC use to generate the migratory birds potentially occurring in my specified location?**

The Migratory Bird Resource List is comprised of USFWS [Birds of Conservation Concern \(BCC\)](#) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the [Avian Knowledge Network \(AKN\)](#). The AKN data is based on a growing collection of [survey, banding, and citizen science datasets](#) and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle ([Eagle Act](#)

requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the [AKN Phenology Tool](#).

### **What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?**

The probability of presence graphs associated with your migratory bird list are based on data provided by the [Avian Knowledge Network \(AKN\)](#). This data is derived from a growing collection of [survey, banding, and citizen science datasets](#).

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

### **How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?**

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: [The Cornell Lab of Ornithology All About Birds Bird Guide](#), or (if you are unsuccessful in locating the bird of interest there), the [Cornell Lab of Ornithology Neotropical Birds guide](#). If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

### **What are the levels of concern for migratory birds?**

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are [Birds of Conservation Concern](#) (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the [Eagle Act](#) requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

### **Details about birds that are potentially affected by offshore projects**

---

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the [Northeast Ocean Data Portal](#). The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the [NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf](#) project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the [Diving Bird Study](#) and the [nanotag studies](#) or contact [Caleb Spiegel](#) or [Pam Loring](#).

### **What if I have eagles on my list?**

If your project has the potential to disturb or kill eagles, you may need to [obtain a permit](#) to avoid violating the Eagle Act should such impacts occur.

### **Proper Interpretation and Use of Your Migratory Bird Report**

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

---

## Wetlands

Impacts to [NWI wetlands](#) and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local [U.S. Army Corps of Engineers District](#).

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

Attention: Mr. Mark Paslick

Reference: **Phase I Environmental Site Assessment**  
Proposed Oak Ridge Airport Property  
Oak Ridge, Tennessee  
S&ME Project No. 4143-20-082

Dear Mr. Paslick:

S&ME, Inc. (S&ME) has completed the Phase I Environmental Site Assessment (ESA) for the referenced property. The attached report presents the results of S&ME's assessment of the site, which was performed in accordance with ASTM International (ASTM) E1527-13. The purpose of the Phase I ESA was to identify, to the extent feasible, recognized environmental conditions in connection with the property.

ASTM E1527-13 states that an Environmental Site Assessment "meeting or exceeding" this practice and completed less than 180 days prior to the date of acquisition or intended transaction is presumed to be valid if the report is being relied on by the User for whom the assessment was originally prepared and the following components were completed: interviews, the regulatory review, site visit, and the declaration by the environmental professional responsible for the assessment.

S&ME appreciates the opportunity to provide this Phase I ESA for this project. Please contact us at (865) 970-0003 at your convenience if there are questions regarding the information contained in this report.

Sincerely,

**S&ME, Inc.**

## ◆ Executive Summary

S&ME, Inc. (S&ME) has performed a Phase I Environmental Site Assessment (ESA) of the proposed Oak Ridge Airport property located in the East Tennessee Technology Park north of Oak Ridge Turnpike in Oak Ridge, Tennessee. The following summary is intended as an overview of the Phase I ESA and does not include the complete findings and opinions of the full report.

The subject property consists of approximately 475 acres north of Oak Ridge Turnpike. The central portion of the property is developed with the East Tennessee Technology Park. This area was previously part of the K-25 Gaseous Diffusion Plant, a United States Department of Energy uranium enrichment complex that ceased operations over 35 years ago and has been undergoing cleanup under the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA). With the exception of the former Centrifuge Demonstration Complex, on the east side of the Park, which is currently undergoing cleanup, the subject property has been successfully remediated and closed under the CERCLA agreements. Three office buildings (K-1000, K-1007, and K-1225) are currently located on the property. The southwest and northeast portions of the property are undeveloped woodlands. The former Wheat Community is located on the northeast portion of the subject property. No evidence of current underground storage tanks or hazardous materials was observed on the subject property.

The historical resources reviewed indicate that the property was farmland and woodlands before development of the uranium enrichment complex in the 1940s.

The subject property was identified on the regulatory databases reviewed. DOE and Tennessee Department of Environment and Conservation records have identified trichloroethylene, volatile organic compounds and semi-volatile organic compounds contamination in groundwater on the south-central portion of the subject property and east of the Centrifuge Demonstration Complex. Metals at concentrations that exceed regulatory limits were detected in soil samples northeast of the Centrifuge Demonstration Complex. The concentrations of organic chemicals in groundwater and metals in soil that exceed regulatory limits is considered to be a recognized environmental condition (REC). Additionally, the Centrifuge Demonstration Complex has not been fully characterized for environmental issues. This is a significant data gap. Regulatory soil cleanup of property adjacent to the north of the subject property continues under CERCLA. It is anticipated that current soil cleanup actions will be closed under CERCLA in 2022, and groundwater contamination will continue to be addressed under CERCLA for an indefinite period. Five offsite regulated facilities identified in the regulatory records review are more than one mile from the subject property and therefore are not considered RECs in connection with the property.

**Based on the results of this Phase I ESA, S&ME identified evidence of recognized environmental conditions (RECs) in connection with the subject property.** Based upon regulatory records, site observations, and interviews, a vapor encroachment condition exists.

## 1.0 Introduction

S&ME conducted a Phase I Environmental Site Assessment (ESA) of an approximately 475-acre portion of a property north of Oak Ridge Turnpike near the intersection of Blair Road in Oak Ridge, Tennessee. The subject property is located in and around the East Tennessee Technology Park (ETTP). The Phase I ESA was conducted using the ASTM International (ASTM) *E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*.

### 1.1 Purpose

The purpose of the Phase I ESA is to identify, pursuant to ASTM E1527-13, recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs) and historical recognized environmental conditions (HRECs) in connection with the property. It is S&ME's understanding that the Phase I ESA is being performed for a property transaction.

ASTM defines an REC as the presence or likely presence of hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term includes hazardous substances or petroleum products even under conditions in compliance with laws.

ASTM defines a CREC as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

ASTM defines a HREC as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

The terms do not include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not RECs or CRECs.

### 1.2 Detailed Scope of Services

#### 1.2.1 ASTM E1527-13

S&ME's approach to performing this Phase I ESA consisted of four major tasks in accordance with ASTM Standard Practice E1527-13.

Task 1 - A review of reasonably ascertainable public records for the site and the immediate vicinity was conducted. This review was performed to characterize environmental features of the site and to identify past and present land use activities, on or in the vicinity of the site, which may indicate a potential for RECs. The review of the reasonably ascertainable public records included:

1. Examination of federal, state, tribal and reasonably ascertainable local public records for the site and immediate vicinity.
2. Examination of one or more of the following standard sources: aerial photographs, fire insurance maps, tax files, building department records, zoning/land use records, street directories and topographic maps of the site and vicinity for evidence suggesting past uses that might have involved hazardous substances or petroleum products.
3. Examination of land title records back to 1940, or first developed use – whichever is earlier, as well as a copy of the current deed if the documents are provided to S&ME by the Phase I ESA User.

Task 2 - A site reconnaissance was performed to identify visual signs of past or existing contamination on or adjacent to the site. This reconnaissance was also performed to evaluate evidence found in our public record review that might indicate activities resulting in hazardous substances or petroleum products being used or deposited on the site. The site reconnaissance included the following activities:

1. A reconnaissance of the site and adjacent properties was performed to look for evidence of current and past property uses, signs of spills, stressed vegetation, buried waste, underground storage tanks (USTs) or above ground storage tanks (ASTs), subsidence, transformers, or unusual soil discoloration which may indicate the possible presence of contaminants on the properties. Photographs are provided to document these conditions.
2. The exterior reconnaissance involved a viewing of the periphery of the property and a walk-through of accessible areas of the site interior including the exterior of on-site structures, if present.
3. The interior reconnaissance involved a walk-through of the interior of all accessible structures, if present.

Task 3 - Interviews with past and present property owners (if available), operators and occupants as well as with appropriate local officials were conducted to consider any local knowledge of hazardous substances or petroleum products on the property or on adjacent properties.

Task 4 - Report preparation and review.

### *1.2.2 Exclusions from and Additions to Scope of Services*

Unless specifically authorized as an addition to the Phase I ESA scope of services, the assessment did not include any assessment of environmental conditions not specifically included in the ASTM E1527-13 standard including, but not limited to sampling of materials (i.e., soil, surface water, groundwater or air), or the assessment of business risk issues such as asbestos-containing materials (ACM), lead-based paint (LBP), lead in drinking water, mold, fungi or bacteria in on-site buildings, regulatory compliance, cultural/historic risks, wetlands, industrial hygiene, health/safety, ecological resources, endangered species, indoor air quality, vapor intrusion, radon or high voltage power lines.

### *1.2.3 Viability of the Phase I ESA*

ASTM E1527-13 states that an ESA “meeting or exceeding” this practice and completed less than 180 days prior to the date of acquisition or intended transaction is presumed to be valid if the report is being relied on by the user for whom the assessment was originally prepared. The components of the practice that must be completed within 180 days prior include: interviews, searches for recorded environmental cleanup liens, the regulatory review, site visit and the declaration by the environmental professional responsible for the assessment. If these components were not completed within 180 days, or if the report is to be used by an entity other than the User for whom the assessment was originally prepared, additional information is required to comply with the ASTM E1527-13 practice.

## **1.3 Significant Assumptions**

Information obtained from the User, the User’s representatives, individuals interviewed, and prior environmental reports was considered to be accurate unless S&ME’s reasonable inquiries clearly revealed otherwise.

The groundwater within the local geologic province is typically contained in an unconfined (water table) aquifer. The slope of the water table under static conditions (no pumping interference) often approximates the land surface topography. Thus, the interpreted groundwater flow direction is assumed to be approximately the same as the topography of the ground surface. Perennial surface waters (creeks, streams, rivers, ponds, etc.) are assumed to act as a discharge point for groundwater flow.

## **1.4 Limitations of the Assessment**

The Phase I ESA was conducted using ASTM E1527-13. The findings of this report are applicable and representative of conditions encountered at the property on the date of this assessment and may not represent conditions at a later date. The review of public records was limited to that information which was available to S&ME at the time this report was prepared. Interviews with local and state government authorities were limited to those people whom S&ME was able to contact during the preparation of this report. Information was derived from “reasonably ascertainable” and “practically reviewable” sources in compliance with our understanding of the standards set forth by ASTM E1527-13.

The opinions presented in this report are based on findings derived from a site reconnaissance, a review of specified regulatory records and historical sources, and comments made by interviewees. Generally, information obtained from public records and from interviews is reliable. However, S&ME cannot warrant or guarantee that information provided is complete or accurate. In the event responses requested by S&ME from public agencies are provided to S&ME following the submittal of our report, they will be forwarded to the User in the form received for evaluation by the User.

Limitations were encountered during performance of this assessment. The history of the property was not documented within approximately five-year intervals because standard historical sources were either not available or not observed at five-year intervals. This limitation is not considered significant. Additionally, the Centrifuge Demonstration Complex has not been fully characterized for environmental issues. This is a significant data gap.

## 1.5 Special Terms and Conditions

This Phase I ESA was conducted in accordance with S&ME Proposal No. 41-200385R1, dated September 8, 2020.

## 1.6 User Reliance

The resulting report is provided for the use of Goodwyn Mills Cawood (GMC). Use of this report by any third parties will be at such party’s sole risk except when granted under written permission by S&ME. Any such authorized use or reliance by third parties will be subject to the same Agreement, under which the work was conducted for GMC.

## 2.0 General Site Description

### 2.1 Site Location

The subject property consists of an approximately 475-acre property located north of Oak Ridge Highway near the intersection of Blair Road in Oak Ridge, Tennessee. The location of the subject property is shown on Figures 1 through 4 in Appendix I. Figure 1 delineates the property that will be acquired for ownership by the Oak Ridge Airport as well as property within the Area of Potential Effect (APE) of the airport that will not be acquired. According to the Roane County Property Assessors office, the subject property is owned by the US Atomic Energy Commission, Manhattan Project, LLC, Heritage Center, LLC, JMM Realty, LLC, Trinity Contracting Services Co., LLC, and Coqui Island, LLC. The parcels within the assessment area are listed below.

**Table 1 – Parcel Ownership**

DOE Property Transfer	Transfer Type	Parcel ID	Current Owner	Acreage	Comments
K-1000	Covenant Deferral	1.14	Heritage Center LLC	Approx. 3	Subdivide to include K-1000 footprint, property north of Argon St., and immediately south of Argon.
K-1007	Covenant Deferral	1.19	JMM Realty, LLC		See 1.19 below
K-1225	Covenant Deferral	1.25	JMM Realty LLC		See 1.25 below
K-1008-F footprint	Covenant Deferral	1.11	Heritage Center, LLC	0.28	Within K-1200 area. Building demolished.
ED-4	Clean Parcel Determination	1.09	Heritage Center, LLC	5.55	
		1.10	Heritage Center, LLC	6.29	
ED-5	Covenant Deferral	10.18	U.S. DOE	20.38	

ED-7	Clean Parcel Determination	10.03	Southern Appalachian Railway	1.65	Small portion, east end of parcel
ED-8	Covenant Deferral	1.12	Heritage Center, LLC	3.59	
		1.13	Heritage Center, LLC	3.65	Portion north of K-1580
		1.15	Heritage Center Greenways	11.05	
		1.19	Manhattan Project LLC	12.99	Includes K-1007 footprint
		1.25	JMM Realty LLC	4.22	Includes K-1225 footprint
		1.28	Heritage Center LLC	0.57	
		1.29	Heritage Center LLC	2.23	
ED-9	Covenant Deferral	1.17	Heritage Center LLC	7.06	
		1.18	Heritage Center, LLC	3.72	
ED-13	Clean Parcel Determination	1.44	U.S. DOE	166.34	
ED-16	Clean Parcel Determination	1.44	U.S. DOE	Included above	
Former Powerhouse, Duct Island and K-1007-P1 Area	Covenant Deferral (Not complete)	10.17	U.S. DOE	3.63	These areas are a part of the 662-acre Covenant Deferral
		K-1007-P1	U.S. DOE	22.33	
K-1006 Footprint	Covenant Deferral (Not complete)	10.29	U.S. DOE	1.19	
K-1039 & K-1039-1 footprint	Covenant Deferral (Not complete)	10.30	U. S. DOE	0.48	
Z2-44 (Area B)	Covenant Deferral (Not complete)	1.43	U.S. DOE	3.59	Portion of Z2 EU 44, adjacent to former TSCA Incinerator footprint
K-1070 C/D Burial Ground (Area B)	Covenant Deferral (Not complete)	1.43	U.S. DOE	9.43	Area east of patrol road

K-1200 Centrifuge Demonstration Complex	Covenant Deferral (Not complete)	1.43	U.S. DOE	17.86	
---	----------------------------------	------	----------	-------	--

**Table 2- Site Characteristics**

Item	Comments
Subject Property Address	Various Addresses within the ETPP
Subject Property Location	North of Oak Ridge Turnpike
Number of Parcels and Acreage	Entire or portions of 23 parcels containing approximately 475 acres
Number of Building(s) and Square Footage	Three buildings: K-1007: 150,000 square feet K-1000: 3,500 square feet K-1225: 30,000 square feet
Current Property Use	Office buildings, vacant parcels, and woodlands
Current Zoning	Unknown

## 2.2 Site Vicinity and Characteristics

The subject property is currently occupied by four office buildings, vacant parcels, and woodlands. Asphalt-paved roads and graveled roadways traverse the property. The surrounding properties consist of DOE owned closed former hazardous materials disposal area, DOE owned empty land and woodlands which include the Wheat Historic District and the Black Oak Ridge Conservation Easement (BORCE); privately owned empty land, office buildings, and woodlands.

## 3.0 User Provided Information

### 3.1 Title Records

The User did not provide S&ME with title records for review, and S&ME was not engaged to secure a title report as part of the Services.

### 3.2 Environmental Liens or Activity and Use Limitations

Review of Activity and Use Limitations (AULs) and environmental liens by the environmental professional can help in determining if a REC is associated with the property. AULs can include both institutional and engineering controls and are often recorded in land title records in the restrictions of record rather than a typical chain-of-title or title abstract. The User has the responsibility of checking land title and judicial (federal, state, tribal and local) records.

No lien/AUL search was provided by the User, and no information regarding environmental liens, AULs, or governmental notification relating to past or recurrent violations of environmental laws with respect to the subject parcel was reported to S&ME by the User.

### **3.3 Specialized Knowledge**

The User is aware that portions of the subject property were formerly used for uranium enrichment activities.

### **3.4 Commonly Known or Reasonably Ascertainable Information**

Covenant Deferral Request documentation, Clean Parcel Determinations, and the supporting Environmental Baseline Reports for portions of the subject property were provided to S&ME by the User. These documents support the transfer of federal land under CERCLA 120(h)(4) and are summarized in Section 3.8.

### **3.5 Valuation Reduction for Environmental Issues**

The User did not indicate whether the purchase price of the property reflects the current market value.

### **3.6 Owner, Property Manager, and Occupant Information**

According to the Roane County Property Assessors office, the property owners are the US Atomic Energy Commission, Manhattan Project, LLC, Heritage Center, LLC, JMM Realty, LLC, Trinity Contracting Services Co., LLC, and, Coqui Island, LLC.

### **3.7 Reason for Performing the Phase I ESA**

It is our understanding that the Phase I ESA is being conducted in order to facilitate a property transaction. The purpose of the Phase I ESA is to identify, pursuant to ASTM E1527-13, RECs in connection with the property. S&ME assumes that this Phase I ESA is being performed to assist the prospective purchaser in qualifying for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability.

Further, this Phase I ESA assesses property that will not be acquired for the airport, by will likely be impacted by the intended airport construction. The purpose of the Phase I ESA for these areas is to identify RECs for planning and executing necessary actions, such as tree removal, for airport construction.

### **3.8 Other**

Covenant Deferral Request documentation, Clean Parcel Determinations, and the supporting Environmental Baseline Reports for portions of the subject property were provided to S&ME by the User. These documents support the transfer of federal land under CERCLA 120(h)(4). Seven Environmental Baseline Surveys (EBS), summarized below, were reviewed for portions of the subject property. The referenced parcels are illustrated on Figure 3 in Appendix I.

**Parcel ED-4** is located in the southeastern portion of the ETPP. It consists of two noncontiguous tracts comprising a total of approximately 18 acres. The western tract of ED-4 encompasses approximately 8.5 acres in the northeastern quadrant of the intersection of Victorious Boulevard and Highway 58. The eastern tract encompasses an area of approximately 9.5 acres in the northwestern quadrant of the intersection of Blair Road and Oak Ridge Turnpike. Oak Ridge Turnpike bounds both tracts of land to the south. The eastern boundary of the eastern tract follows Blair Road for nearly 500 feet from its intersection with Oak Ridge Highway to the point at which Blair Road turns eastward. Aerial photographs indicate that this area has largely been undeveloped woodland since federal acquisition. Before that time, the land where ED-4 is located consisted primarily of forests and grasslands intermixed with large and small orchards, cropland, and pastures associated with the agriculturally based and no longer extant Wheat Community. No evidence was found of disposal of hazardous substances or releases of petroleum products occurring on ED-4 property. There were and are no underground storage tanks located on ED-4. No potential groundwater plume has been identified within, or in proximity to, ED-4. Additionally, the study area is upgradient of, or cross gradient to, the discharge zone for groundwater flow from ETPP. Parcel ED-4 was transferred with a Clean Parcel Determination dated May 12, 2008.

**Parcel ED-7** occupies approximately five acres. It is located outside the main protection fence in the southwestern portion of ETPP adjacent to and parallel to Oak Ridge Turnpike. The Southern Railroad tracks and Connector Road form the northern boundary, and Oak Ridge Turnpike forms the southern boundary. Burchfield Road forms the eastern boundary. Most of Parcel ED-7 is relatively flat or gently sloping to the railroad tracks along the northern border. With the exception of vegetation along the railroad tracks to the south of the parcel, it is clear of vegetation. No evidence was found of a release or disposal of hazardous substances or petroleum products or their derivatives occurring on the parcel in the documentation reviewed. There were no underground storage tanks located on the parcel. Groundwater contamination has not been identified within, or in proximity to, the Parcel ED-7. Results of radiological surveys conducted on the property showed that Parcel ED-7 had no soil areas that exceeded the clean-up levels established for the portion of the ETPP where ED-7 is located. Soil samples were collected to support leasing in December 1999, January 2000, and December 2000. In addition, soil samples were collected by the Environmental Management (EM) Program in 2005 from within the parcel. Results of the soil sampling showed that Parcel ED-7 had no soil areas that exceeded the clean-up levels established for the portion of the ETPP where ED-7 is located. ED-7 was transferred with a Clean Parcel Determination.

**Parcel ED-8** is located in the southern portion of the ETPP and contained three existing buildings (Buildings K-1007, K-1580, and K-1000). The parcel is comprised of approximately 84 acres. The southern boundary of the parcel follows along Oak Ridge Turnpike for approximately 2,250 feet and then follows the eastern bank of the K-1007 pond to the boundary with Parcel ED-5. The northern boundary of the parcel steps around and south of the former Building K-1652, along the periphery of other features and finally to its eastern border against Parcel ED-4. Based on reviews of historic maps, three former buildings (K-1047 Motor Pool Repair Shop, K-1049 Repair Shop and Parts Storage, and K-1050 Wash, Grease, and Paint Shop) were previously located in the vicinity of the current K-1007 Building. These facilities were demolished by the late 1950s and the area was maintained as a grassy field until the construction of Building K-1007 in 1960. Other former facilities on the parcel included:

- Building 665 Steam Shed—built in 1943 to clean construction vehicles, demolished in 1946.
- K-1055 Gasoline/Diesel Station—in use as early as 1944, used one UST, demolished by the 1950s.
- K-1048 Tire and Battery Shop—built in 1943, demolished by 1958.
- K-1007 Gas Tank—a 200-gallon gasoline UST for the K-1007 emergency generator. In 1986, the UST was discovered to be leaking. The UST and 14 tons of contaminated soil were removed by 1988. The

excavated area was filled and asphalt was placed on top. The tank closure was prior to external regulation; therefore, there is no correspondence with outside regulators or a closure report.

- The 600 Oil Storage Area -This facility consisted of aboveground storage tanks constructed in the early 1940s and removed by 1951.

A groundwater monitoring well is located within the ED-8 footprint approximately 250 feet north of the K-1000 Complex. This monitoring well intersects the southwestern tip of a volatile organic compound (VOC) plume and has shown contaminant concentrations in the range of 0.7 to 15 micrograms per liter ( $\mu\text{g/L}$ ) in a March 2007 sampling event. The VOCs tetrachloroethene (PCE) and trichloroethylene (TCE) occurred above a federal drinking water maximum contaminant level (MCL) and TDEC domestic water supply criteria in the sample collected from the well. The source of the contamination is off-parcel to the northeast. Because of the uncertainty associated with the nature of the on-site groundwater and the need to evaluate and possibly address groundwater in the future, DOE recommended that the transfer of Parcel ED-8 be achieved by a covenant deferral per the CERCLA. The recommended land use restrictions were:

- The property shall not be developed in a manner that is inconsistent with the land use assumptions of "industrial use"
- Development of the property must comply with all applicable federal, state, and local laws and regulations with respect to any present or future development of the property.
- All structures, facilities, and improvements requiring a water supply shall be required to be connected to an approved water system for any and all usage. Extraction, consumption, exposure, or use, in any way, of the groundwater underlying the property is prohibited without the prior written approval of DOE, the U.S. EPA Region 4, and TDEC.
- Disturbance of any portion of the property deeper than 10 feet bgs without the prior written approval of DOE, EPA, and TDEC is prohibited.
- DOE reserves the right of access to all portions of the property for environmental investigation, remediation, or other corrective action.

**Parcel ED-9** is located in the south-central portion of the ETPP. Parcel ED-9 consists of 13 acres which have been transferred to Heritage Center, LLC. The 13 acres include two tracts of land, referred to as ED-9A (7.06 acres) and ED-9B (5.02 acres), separated by a roadway, and a third tract consisting of approximately 900 linear feet of paved road and adjacent right-of-way (ROW), referred to as ED-9C (0.98 acre). Facilities and related structures that formerly occupied tracts ED-9A and ED-9B, but are no longer in existence, include:

- K-1002 Cafeteria K-1004-N Cooling Tower
- K-1003 Dispensary K-1004-P Test Facility
- K- 1004-A Laboratory K-1015 Laundry Facility
- K-1004-B Laboratory K-1015-A Laundry Pit
- K-1004-C Laboratory K-1019-2B Bus Shelter
- K-1004-D Laboratory K-1044 Heavy Equipment Shop
- K-1004-E Laboratory Storage Building K-1205-A Condensate Station
- K-1004-F Laboratory Storage Building K-1550 Engineering Office Trailers
- K-1004-H Liquid Gas Storage Shed
- K-1004-L Laboratory Pilot Plant

Remedial activities (RAs) performed at the K-1015-A Laundry Pit included removal of the pit and a small amount of adjacent soil. Additional RAs consisted of removal of six acid dilution pits and a small volume of soil at a pit which was located southwest of the former K-1004-A Test Facility building; removal of inlet piping to two of the six dilution pits; in-place closure of the acid dilution pit located immediately west of Bldg. K-1006; and removal of contaminated surface soils south of former Bldg. K-1004-J. Following completion of the RAs, No Further Action (NFA) decisions were obtained in 2009.

Twelve groundwater monitoring wells were installed within tracts ED-9A and ED-9B, including nine bedrock wells and three unconsolidated zone wells. Water levels in the bedrock wells ranged from 13 to 25 ft below ground surface (bgs). Shallow groundwater flow direction is anticipated to be to the south—southwest toward the K-1007-P Ponds located south—southwest of ED-9 according to the ED-9 Environmental Baseline Survey dated March 22, 2010. Groundwater samples collected from the nine bedrock wells beginning in 1994 have indicated sporadic occurrences of trichloroethene (TCE) and other volatile organic compounds (VOCs). The source of contamination was not documented. In general, VOC concentrations have been declining. The presence of contaminated groundwater beneath the parcel is considered to represent a release of hazardous substances to the property. DOE recommended that the transfer of Parcel ED-9 be achieved by a Covenant Deferral per CERCLA with the following land use restrictions:

- The property shall not be developed in a manner that is inconsistent with the land use assumptions of “industrial use”
- Development of the property must comply with all applicable federal, state, and local laws and regulations with respect to any present or future development of the property.
- All structures, facilities, and improvements requiring a water supply shall be required to be connected to an approved water system for any and all usage. Extraction, consumption, exposure, or use, in any way, of the groundwater underlying the property is prohibited without the prior written approval of DOE, EPA Region 4, and the TDEC.
- Disturbance of any portion of the property deeper than 10 feet bgs without the prior written approval of DOE, EPA, and TDEC is prohibited.
- DOE reserves the right of access to all portions of the property for environmental investigation, remediation, or other corrective action.

**Parcel ED-13** encompasses approximately 98 acres of partially wooded land located east of the former Centrifuge Demonstration Complex. The two tracts of Parcel ED-4 bound the land at its southwestern and southeastern corners and the Oak Ridge Turnpike bounds the parcel on the south between the two tracts of Parcel ED-4. The southern portion includes a former railroad bed and a wetlands area near the headwaters of Mitchell Branch. The eastern boundary of the tract is bounded by the Wheat Archaeological District. The eastern portion is divided by a segment of the Haul Road used to transport waste from ETPP to the Environmental Management Waste Management Facility (EMWMF). The western boundary is formed by the parking lot adjacent to Victorious Boulevard. Prior to federal acquisition, the land in Parcel ED-13 consisted primarily of forests and grasslands intermixed with large and small orchards, cropland, and pastures associated with the Wheat Community. An underground natural gas line is located in the center of the parcel.

The K-1070-C/D Burial Ground is located on the western border of Parcel ED-13, north of the K-1200 complex of buildings. The burial ground operated from 1974 until 1989 and included three large trenches and ten pits were used for the disposal of liquid and solid wastes. Dust suppression during landfarming operations was carried out

with 4,450 gal of oil in 1982 and 2,000 gal of oil 1983. The 1982 oil was free of uranium and had chlorinated hydrocarbon content below 1% and polychlorinated biphenyl (PCB) content less than 5 parts per million (ppm). The 1983 oil contained relatively high levels of uranium. When it was assumed that the oil had been biodegraded by microorganisms, the dirt was scraped off and buried in a trench in C Burial Ground. The K-1070-C/D Burial Ground and the associated pits received NFA designations as reported in the EBS of ED-13, dated March 12, 2012.

Three surface water samples collected from within the Parcel ED-13 footprint were analyzed for VOCs, semi volatile organic compounds (SVOCs), metals, pesticides, and PCBs. There were no VOCs, SVOCs, pesticides, or PCBs detected in the surface water samples from Parcel ED-13. The metals detected included aluminum, arsenic, barium, beryllium, cadmium, cobalt, copper, iron, lead, magnesium, manganese, nickel, thallium, and zinc. ED-13 was transferred with a Clean Parcel Determination as reported in the EBS of ED-13, dated March 12, 2012.

**Parcel ED-16** encompasses approximately 66.99 acres of partially wooded land located east of the former Centrifuge Demonstration Complex and approximately 5,624 linear feet of two roads, the Haul Road and Blair Road. The portions of the Haul Road (approximately 2,900 linear ft) and Blair Road (approximately 2,724 linear ft) bisect the property and extend southward to the right-of-way (ROW) of Oak Ridge Turnpike. Prior to federal acquisition, the land in Parcel ED-16 consisted primarily of forests and grasslands intermixed with large and small orchards, cropland, and pastures associated with the Wheat Community.

The Haul Road is an elevated gravel road completed in 2008 and is dedicated to the transportation of waste from ETPP to the Environmental Management Waste Management Facility (EMWMF). The road is not open to the public. The Haul Road is currently owned by DOE but is intended to be transferred to the public. The Haul Road is monitored on a monthly basis using large-area plastic scintillation detectors mounted on a tractor. Resulting data are analyzed for anomalous readings and trended to guard against any gradual buildup of low-level contamination. Any anomalous readings are immediately investigated and quantified using hand-held instruments. Through this survey program, contamination above background has not been detected on the Haul Road since its construction. Thus, the Haul Road has not been impacted by the DOE waste transportation activities. DOE will continue to monitor the Haul Road until it is closed.

Six soil samples collected from within Parcel ED-16 were analyzed for chemicals in April 2011 by DOE in support of the clean parcel determination. The detected chemical results for the soil samples collected include four VOCs and the metals arsenic, cobalt, lead, and nickel. The VOCs acetone, carbon disulfide, methylene chloride, and toluene were detected below RSLs. Arsenic was detected in soil samples at 16.4 milligrams per kilogram (mg/kg), marginally exceeding the 14.95 mg/kg background threshold value (TV). Lead was detected in soil at two locations marginally exceeding the 37.91 mg/kg background TV. Groundwater samples were collected in 2010 to support the NPL boundary definition project. The most notable chemical detects include the metals arsenic, iron, and manganese. ED-16 was transferred with a Clean Parcel Determination.

The **K-1000 Complex** is composed of two separate structures that share a common canopy. The eastern structure is the Bldg. K-1000 Visitor Center, which was originally constructed in 1954 as a gatehouse. The building is 1,883 ft<sup>2</sup> and is constructed of brick and concrete masonry walls on a concrete slab. The western structure of the K-1000 Complex is the K-1000 Access Center, a 557-ft<sup>2</sup>, single story, rectangular structure that was built in 1957. It is constructed of steel-framed, concrete-block construction with a concrete foundation. In 2006, four surface and subsurface soil samples were collected from the single location where the ground surface is exposed in the K-1000 Complex. Analysis of the samples found detectable levels of semi volatile organic compounds (SVOCs) and

metals. Soil samples were also analyzed for volatile organic compounds (VOCs), PCBs, herbicides, and radionuclides; however, no VOCs, PCBs, or herbicides were detected. Comparison of the SVOC and metal concentrations indicates that none of the contaminants exceeds EPA Region 9 Industrial preliminary remediation goals (PRGs) for soil.

## 4.0 Records Review

### 4.1 Standard Environmental Record Sources

S&ME reviewed the regulatory lists obtained from Environmental Data Resources (EDR). EDR contacts regulatory agencies on a periodic basis to update identified databases. S&ME reviewed regulatory agency files for identified facilities which are located within the search radii as established by ASTM E1527-13. The extent of the search radii vary according to the activities and/or materials produced at each facility. The EDR environmental records report is included in Appendix II and contains detailed information regarding the release date and search distance for each database researched, search radii, an explanation of each database, and figures depicting the approximate location of regulated facilities in the vicinity of the subject property.

Regulatory listings are limited and include only those facilities or incidents that are known to the regulatory agencies at the time of publication to be contaminated, in the process of evaluation for potential contamination, or to store/generate potentially hazardous substances, waste, or petroleum. The Phase I ESA search radii are listed below.

**Table 3 – Federal Environmental Record Sources**

Database	Approximate Search Distance	Number of Sites in Results
NPL	1 mile	1
Proposed NPL	1 mile	0
DELISTED NPL	1 mile	0
NPL LIENS	Target Property	0
CERCLIS	0.5 mile	0
CERCLIS-NFRAP	0.5 mile	0
CORRACTS	1 mile	2
RCRIS-Non-Gen	Target Property and Adjacent	0
RCRIS-LQG	Target Property and Adjacent	2
RCRIS-TSDF	Target Property and Adjacent	2
ERNS	Target Property	0
HMIRS	Target Property	0

TRIS	Target Property	0

Database	Approximate Search Distance	Number of Sites in Results
TSCA	Target Property	0
FTTS	Target Property	0
PADS	Target Property	3
MLTS	Target Property	0
MINES	0.25 mile	0
ABANDONED MINES	0.5 mile	0
FINDS	Target Property	3
RAATS	Target Property	0

**Table 4 – State Environmental Record Sources**

Database	Approximate Search Distance	Number of Sites in Results
Hazardous Waste (SWHS)	1 mile	0
Landfills (SWF/LF)	0.5 mile	0
LUST	0.5 mile	1
UST	0.25 mile	1
Spills	Target Property	0

**Table 5 - Database Search Results**

Facility	Location Direction & Distance	Record	Comment
Oak Ridge Reservation	Bethel Valley Road Target Property	NPL SEMS CORRACTS US ENG CONTROLS US INST CONTROLS 2020 COR ACTION ROD PRP PADS	This a regional listing which encompasses the entire Oak Ridge Reservation. It includes areas not in the subject property.
East Tennessee Materials and Energy Corporation	2010 Highway 58, Suite 1020 643 feet SW	TN AIRS TRIS FINDS ECHO CORRACTS	This facility is listed at Buildings 1005 and 1007 on the subject property. The parent company names are Perma-Fix Environmental Services and East Tennessee Materials & Energy Corporation. This location appears to be the offices of Perma-Fix Environmental Services

Facility	Location Direction & Distance	Record	Comment
		RCRA-TSDF RCRA-LQG 2020 COR ACTION PADS	and East Tennessee Materials & Energy Corporation.
US DOE East Tennessee Tech Park	Portal 8 Perimeter Road 2677 feet NNW	FINDS	Location data in the EDR report for this listing indicates it was located approximately 800 feet NW of the subject property, near the former K-25 facility,
US DOE East Tennessee Technology Park	Rt. 58 & Blair Road 2839 feet NW	CORRACTS RCRA-TSDF RCRA-LQG 2020 COR ACTION PADS FINDS ECHO	This listing is for the entire ETTP property and includes listings included in the facilities listed above.
Five additional facilities are listed. These facilities are more than one mile from the subject property. They are not considered RECs in connection with the subject property.			

The subject property was identified on the databases reviewed as a TN AIRS, TRIS, FINDS, ECHO, CORRACTS, RCRA-TSDF, RCRA-LQG, 2020 COR ACTION, and PADS site. See Sections 3.8 above and 4.1.1 below. Five off-site regulated facilities were identified more than one mile from the subject property. Given their regulatory status and/or distances from the subject property, they are not considered RECs in connection with the property.

#### 4.1.1 State Agency File Review

S&ME reviewed regulatory files provided by TDEC for the subject property.

#### **Division of Underground Storage Tanks (DUST)**

In 1991, diesel free product was detected in a groundwater monitoring well at the former K-1440 garage site. This site was north of former Centrifuge Demonstration Complex and on the subject property. In 1987, a release from a 12,600-gallon diesel UST was discovered. The UST was removed. Total petroleum hydrocarbons (TPH) and benzene, toluene, and xylene (BTEX) contamination was detected in soil and groundwater samples. Impacted soils were excavated and treated via aeration on-site. Additional monitoring wells installed at the site identified a groundwater plume. An in-situ bioremediation system was installed to treat the groundwater. No documentation of the groundwater treatment system was observed. However, a case closure letter from TDEC, DUST, dated June 25, 1996.

In 1991, two diesel USTs were removed from the Centrifuge Demonstration Complex east of Americus Avenue. No documentation of soil analytical data was observed in the files reviewed. However, a case closure letter from TDEC, DUST, dated November 11, 1994 was observed in the files.

**Division of Solid Waste Management**

Quarterly aged waste reports, prepared by Materials and Energy Corporation, from 2006 through 2012 were reviewed. The reports are for all DOE aged waste. Tables listed hundreds of materials. The materials were stored and processed at the former Centrifuge Demonstration Complex east of Americus Avenue and on the subject property. Compliance Inspections (CIs) in 2012 and 2013 did not identify any regulatory violations. Hazardous waste management activities were terminated on the site in 2019.

**4.2 Additional Environmental Record Sources**

*4.2.1 EDR Supplementary Sources*

The EDR report also includes additional environmental records not listed among the standard federal, state, and tribal databases, which are summarized as follows.

**Table 6 – Additional EDR Proprietary Environmental Record Sources**

Database	Approximate Search Distance	Number of Sites in Results
Manufactured Gas Plants	1 mile	0
EDR Historical Auto Stations	0.25 mile	0
EDR Historical Cleaners	0.25 mile	0

No manufactured gas plants, historical auto stations, or historical cleaners were identified within their respective search distances.

**4.3 Physical Setting Sources**

S&ME reviewed the United States Geological Survey (USGS) topographic map depicting the site and surrounding area. The map reviewed was the Elverton, Tennessee 7-1/2-minute topographic quadrangle dated 1968. The central portion of the subject property shows the USDOE development. Several buildings were observed west of Americus Avenue. The former Centrifuge Demonstration Complex was identified east of Americus Avenue. A pond was observed to the southwest of these buildings and a rail line was observed along the southeast property line. Wooded areas were to the southwest and northeast. Blair Road bisects the northeast portion of the property. appears to consist of undeveloped land. No structures were indicated on the property. The general topographic slope is down to the southwest. That portion of the topographic map showing the site and immediately surrounding area is included in Appendix I (Figure 1).

The project site lies within the Appalachian Valley and Ridge Physiographic Province. The Province is characterized by elongated, northeasterly-trending ridges formed on highly resistant sandstone and shale. Between ridges, broad valleys and rolling hills are formed primarily on less resistant limestone, dolomite, and shale.

Published geologic information indicates that the site is underlain by bedrock of the Chickamauga and Conasauga Groups. The Chickamauga Group is not differentiated into its individual formations in the immediate area of this site. Where undivided, the Chickamauga Group is primarily composed of calcareous shale with crystalline limestone and minor amounts of sandstone. Bedrock from this geologic setting typically weathers to produce a thick, medium to high-plasticity clay residual soil. Silica in the form of chert is resistant to weathering and typically scattered throughout the residuum. In the area of this site, the Conasauga Group is composed of the following formations; Maryville Limestone, Rutledge Limestone, Rogersville Shale, and Pumpkin Valley Shale. The Maryville and Rutledge Limestones are massive, crystalline to aphanitic limestones containing thin dolomitic layers which typically weather to produce a reddish orange clay residuum containing chert fragments. The Rogersville Shale consists of light green, olive green, and purple shale which typically weathers to a thin acidic clay soil containing shale chips. The Pumpkin Valley Shale consists of red, yellow, or brown shale which typically weathers to produce silty clay residuum with some sand and shale-like structure.

#### *4.3.1 Aerial Photographs*

Aerial photographs of the subject property and surrounding properties were obtained from EDR. The photographs reviewed were dated 1976, 1987, 1992, 1997, 2008, 2012, and 2016. The aerial photograph coverage was only for the central developed portion of the subject property. The subject property was developed with DOE buildings on all of the photographs through 2008. Numerous small buildings were observed east of Americus Avenue. The Centrifuge Demonstration Complex and K-1440 garage area were observed east of Americus Avenue from 1976 through 1997. The K-25 Complex was observed north of the subject property through 2012. Copies of the historical aerial photographs are included in Appendix III.

#### *4.3.2 Sanborn Maps*

S&ME contracted with EDR to conduct a database search of Sanborn Fire Insurance Maps that depicted the subject property. Sanborn Map coverage for the subject property was not available for review.

#### *4.3.3 City Directories*

S&ME contracted with EDR to conduct a database search of city directories for the subject property and properties in the vicinity of the subject property. EDR reviewed city directories for the years 1992, 1995, 2000, 2005, 2010, 2014, and 2017. Numerous businesses were located along Oak Ridge Turnpike. The businesses included East Tennessee Materials and Energy, Infrared Heating Technologies, Materials and Chemical Laboratories, Oak Ridge National Recycle Center, Oliver's Restaurant, Operations Management International, and Southern Appalachian Railway. Copies of the City Directories are included in Appendix III.

#### *4.3.4 Tribal Records*

S&ME contracted with EDR to conduct a database search of environmental tribal records associated with the subject property. No environmental tribal records were identified.

### 4.3.5 Historical Topographic Maps

S&ME contracted EDR to conduct a search of available USGS historical topographic maps as a standard historical source to address 5-year data gaps. The mapping typically identifies on-site structures and helps to establish property use in the vicinity.

S&ME reviewed the 1895 Loudon 1935, 1941, 1953, 1968, 1989, 1991, and 2013 Elverton, Tennessee topographic quadrangles. The subject property appeared farmland on the 1895 through 1953 topographic maps. The DOE development was first identified on the 1968 map with numerous buildings indicated on the central portion of the subject property. The southwest and northeast portions appeared wooded. High-tension power lines were observed to the southwest and northeast. A rail line was observed along the southeast property line, turning north into the DOE Complex. Historical topographic maps are included in Appendix III.

## 4.4 Historical Use Information on the Property

S&ME reviewed aerial photographs from 1976 to 2016 obtained from EDR. S&ME reviewed city directories from 1992 to 2017 obtained from EDR. S&ME reviewed the Loudon and Elverton, Tennessee USGS 7.5 Minute Series topographic maps for the years 1895 through 2013. The historical records identified the DOE development in the center of the subject property from at least 1968.

The standard historical sources listed below were not reviewed. It is S&ME’s opinion that these sources would not provide additional meaningful and complete information, or the sources were not considered to be practically reviewable or reasonably ascertainable.

- Property Tax Files
- Recorded Land Title Records

## 4.5 Historical Use Information on Adjoining Properties

Historical information including aerial photographs, city directories, and topographic maps were reviewed to assess off-site historical land uses. Our findings are presented in the following tables.

**Table 7 – Aerial Photograph Review of Adjacent Properties**

Direction	Observed Feature	Years Observed for this Feature
North	DOE Development	1976 - 2016
East	Woodlands	1976 - 2016
South	Gallaher Road, Woodlands	1976 - 2016
West	DOE Development, Woodlands	1976 - 2016

**Table 8 – Topographic Map Review of Adjacent Properties**

Direction	Observed Feature	Years Observed for this Feature
-----------	------------------	---------------------------------

North	Farmland, Woodlands	1895 – 2013
East	Woodlands	1895 – 2013
South	Oak Ridge Highway, Woodlands, Farmland	1995 - 2013
West	Farmland	1895 – 1953
	DOE Development, Woodlands	1968 - 2013

## 5.0 Site Reconnaissance

### 5.1 Methodology and Limiting Conditions

A site reconnaissance of the subject property and surrounding area was performed by Mr. Timothy Schalk and Ms. Lydia Birk of S&ME on April 3 and 22, 2021. The on-site observations were followed by a vehicular survey of the surrounding area. The purpose of the site reconnaissance was to identify RECs at the subject property and identify sites of similar environmental concern located within the ASTM minimum search distances. S&ME personnel searched for evidence of past or present activities which could have led to the deposition of hazardous substances or petroleum products. No limiting conditions were encountered.

### 5.2 General Site Setting

#### 5.2.1 Current Use(s) of the Property

The central portion of the property has been developed into the East Tennessee Technology Park. Three buildings (K-1007, K-1000, and K-1225) are located on the property. Demolition activities are occurring north of Building 1225. The Centrifuge Demonstration Complex north of K-1225 is vacant as well as the K-1440 garage area. The remainder of the subject property is vacant grass-covered land and woodlands to the southwest and northeast.

#### 5.2.2 Past Use(s) of the Property

According to observations noted during the site reconnaissance, interviews, and historical documentation, the subject property has been owned by DOE and the central portion was used in support of past uranium enrichment. The southwest and northeast portions have been woodlands and farmland in the past.

#### 5.2.3 Current Use(s) of Adjoining and Surrounding Properties

The current uses of the adjoining properties were identified to the extent that they were visually observed from the subject property during our field reconnaissance, or were identified in interviews or in the records review. Descriptions of adjoining properties are provided below:

- **North** –Parcels formerly utilized by DOE for uranium enrichment are located immediately north of the central portion of the subject property. These include the disposal area north of the former Centrifuge Demonstration Complex. Structures on these parcels have been removed. Woodlands characterize the area further north.
- **East** –Woodlands are immediately east of the subject property. Additional woodlands are further east.

- **South** – Oak Ridge Turnpike is immediately south of the subject property with woodlands beyond.
- **West** – DOE property and woodlands are immediately west of the subject property. Additional woodlands are further west.

#### 5.2.4 *Past Use(s) of Adjoining and Surrounding Properties*

Evidence of previous land uses, including DOE land, farmland, and woodlands was observed on adjoining and surrounding properties through observations made during the site visit.

#### 5.2.5 *Geologic, Hydrogeologic, Hydrologic, and Topographic Conditions*

Surface topography on the subject property slopes down to the southwest. Surface drainage on-site appears to follow the topography of the site.

#### 5.2.6 *Descriptions of Structures and Roads*

Numerous asphalt-paved roads cross the central portion of the subject property. Three buildings (K-1007, K-1000, and K-1225,) are located on the subject property.

#### 5.2.7 *Potable Water and Sewage Disposal System*

Potable water and sewage disposal is currently provided to the subject property by the City of Oak Ridge.

### 5.3 Exterior Observations

The subject property consists of an approximately 475-acre property north of Oak Ridge Turnpike. The central portion of the property is developed as the ETPP. Several asphalt-paved roads cross the Park. Three buildings (K-1007, K-1000, and K-1225) are located within the subject property area. These buildings are offices buildings. There are two office buildings (K-1580 and K-1330) located immediately adjacent to the subject property area. Demolition activities are occurring north of Building 1225. A recently excavated toxic waste UST was observed in this area. Building remnants were observed in this area and the K-1440 garage area to the north. The remainder of the central portion is grass-covered. A pond is located on the southwest portion. The pond appears to flow into Poplar Creek. The remainder of the southwest portion is wooded. The northeast portion of the subject property is wooded. The Haul Road and Blair Road cross this area. A church and cemetery (remnants of the former Wheat Community) are further northeast. and the northeast portion is grass covered. A gravel driveway crosses this portion of the property from west to east. Small mounds of rock and soil were observed, primarily adjacent to the gravel driveway. No evidence of existing USTs or hazardous materials was observed on the exterior of the subject property.

### 5.4 Interior Observations

S&ME observed Buildings K-1007, K-1000, and K-1225. K-1007 is a vacant two-story office building containing Health Services, computer services, and a cafeteria. No hazardous materials were observed in Building K-1007. Building K-1000 was formerly an entry portal into the K-25 Complex. The one-story building has recently been remodeled and is used for meetings. Building K-1225 is a two-story office building. Offices, conference rooms, and lunchrooms were observed. No hazardous materials were observed in the interior of Building K-1225.

## **6.0 Interviews**

### **6.1 Interviews with Past and Present Owners**

S&ME interviewed Mr. Gill Sallade, facility manager of UCOR, concerning past uses of the subject property. Mr. Sallade described the past use of the subject property. He informed S&ME that a toxic waste UST was recently removed from the Centrifuge Demonstration Complex north of K-1225. He also indicated that the portion north of K-1225 currently being demolished has not been fully characterized concerning environmental issues. Mr. Sallade also indicated that the southwest and northeast wooded portions of the subject property have not been developed in the past.

S&ME interviewed Mr. Gus Rizk, the owner representative for Buildings K-1007 and K-1225. Mr. Rizk stated that the two buildings have been office buildings. Mr. Rizk indicated that K-1007 also contained Health Services and Computer Services. Mr. Rizk stated that there are no USTs associated with the buildings and he is not aware of any environmental concerns.

S&ME interviewed Mr. Steve Jones, manager of the Coqui property on the southwest portion of the subject property. Mr. Jones stated that the property has been undeveloped woodlands in the past. He indicated that no structures have been located on the property. Mr. Jones is unaware of any USTs or other environmental concerns at the property.

### **6.2 Interview with Key Site Manager**

See Section 6.1 above.

### **6.3 Interview with Occupants**

Except for Building K-1225, which is occupied by UCOR personnel, the subject property is currently unoccupied.

### **6.4 Interview with Local Government Officials**

No local government officials were contacted during performance of this assessment.

### **6.5 Interview with Others**

No other individuals were interviewed during performance of this assessment.

## **7.0 Vapor Encroachment Evaluation**

Data obtained from the site reconnaissance and interviews were used in conjunction with the protocol established by ASTM E2600-15 to assess vapor encroachment on the subject property. Based upon regulatory records, site observations, and interviews, a vapor encroachment condition exists. See the Vapor Encroachment Screening (VES) Report in Appendix II.

## 8.0 Findings

### 8.1 On-Site Findings

- The central portion of the subject property has been used for uranium enrichment support services in the past.
- Three documented USTs have been located on the subject property. Given the nature of past activities on the central portion of the property, additional USTs are likely to have been, or still are, located on the property.
- TCE, VOC, and SVOC contamination in groundwater has been documented on the south-central portion of the subject property and east of the Centrifuge Demonstration Complex. Additionally, metals were detected in soil samples northeast of the Centrifuge Demonstration Complex. Land use restrictions were recommended for this area.
- The Centrifuge Demonstration Complex is currently undergoing demolition and the area has not been fully characterized concerning environmental issues.

### 8.2 Off-Site Findings

- The K-1070 C/D Burial Ground, a hazardous waste disposal area, is located immediately north of the K-1200 Centrifuge Demonstration Complex.
- Five off-site regulated facilities were identified within the ASTM minimum search distances.

## 9.0 Opinion

### 9.1 On-Site Opinions

- Uranium enrichment support services performed on the subject property are considered an REC.
- The three documented USTs on the subject property received TDEC case closure. However, the potential for additional USTs on the subject property exists. Contaminated groundwater and soil in the vicinity of the Centrifuge Demonstration Complex is considered an REC due to the documented releases.
- The lack of a full characterization of the Centrifuge Demonstration Complex is a significant data gap which prevents S&ME from fully assessing the area.

### 9.2 Off-Site Opinions

- Previous environmental investigations have identified groundwater contamination on the subject property originating from the EMWMF disposal area north of the Centrifuge Demonstration Area. This is considered an REC.
- The five off-site facilities identified are more than one mile from the subject property and therefore are not considered RECs in connection with the property.

### 9.3 Data Gaps

The lack of a full characterization of the K-1200 Centrifuge Demonstration Complex is a significant data gap which prevents S&ME from fully assessing the area. A historical data gap was encountered during the performance of

this assessment. Historical information was not available at five year intervals back to 1940. Based on prior use of the property and extent of data gap (at least 1940 to 1968), this data gap is considered significant.

## 9.4 Additional Investigation

Evidence of RECs was observed at the subject site during this assessment. Additional investigation would be necessary to determine the presence and/or extent of hazardous materials or petroleum products on the subject property.

## 10.0 Conclusions

S&ME has performed a Phase I ESA in conformance with the scope and limitations of ASTM E1527-13 of the proposed Oak Ridge Airport property located in the ETPP north of Oak Ridge Turnpike in Oak Ridge, Tennessee. Any exceptions to, or deletions from, this practice are described in Section 10 of this report. **Based on the results of this Phase I ESA, S&ME identified RECs in connection with the subject property.** Based upon historical records, regulatory databases and records, and on-site observations, a Vapor Encroachment Condition (VEC) exists.

## 11.0 Deviations

No deviations from the standard were made.

## 12.0 Additional Services

No additional services were performed for this Phase I ESA.

## 14.0 Signature(s) of Environmental Professional(s)

I, Timothy S. Schalk, declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in paragraph 312.10 of 40 CFR 312, and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

A handwritten signature in cursive script that reads "Timothy S. Schalk".

Timothy S. Schalk  
Environmental Professional

## 15.0 Qualification(s) of Environmental Professional(s)

Qualifications of the environmental professional who contributed to this Phase I ESA are included in Appendix VII.

S&ME provides a broad range of environmental services, including site assessments for real estate transactions. S&ME has over 1,100 employees located in 37 offices throughout the southeast. Engineering News and Record recently ranked S&ME as one of the 200 largest environmental firms in the country.

The environmental professional for this Phase I ESA is Mr. Timothy S. Schalk. Mr. Schalk has 25 years of environmental experience performing and managing Phase I and II Environmental Site Assessments. Please refer to Mr. Schalk's resume in Appendix VI for further details.

The peer reviewer for this Phase I ESA is Ms. Lydia Birk. Ms. Birk has over 25 years of experience as an environmental engineer and project manager for variety of environmental assessment, investigation and remediation projects, including the East Tennessee Technology Park CERCLA cleanup program. Please refer to Ms. Birk's resume in Appendix VI for further details.

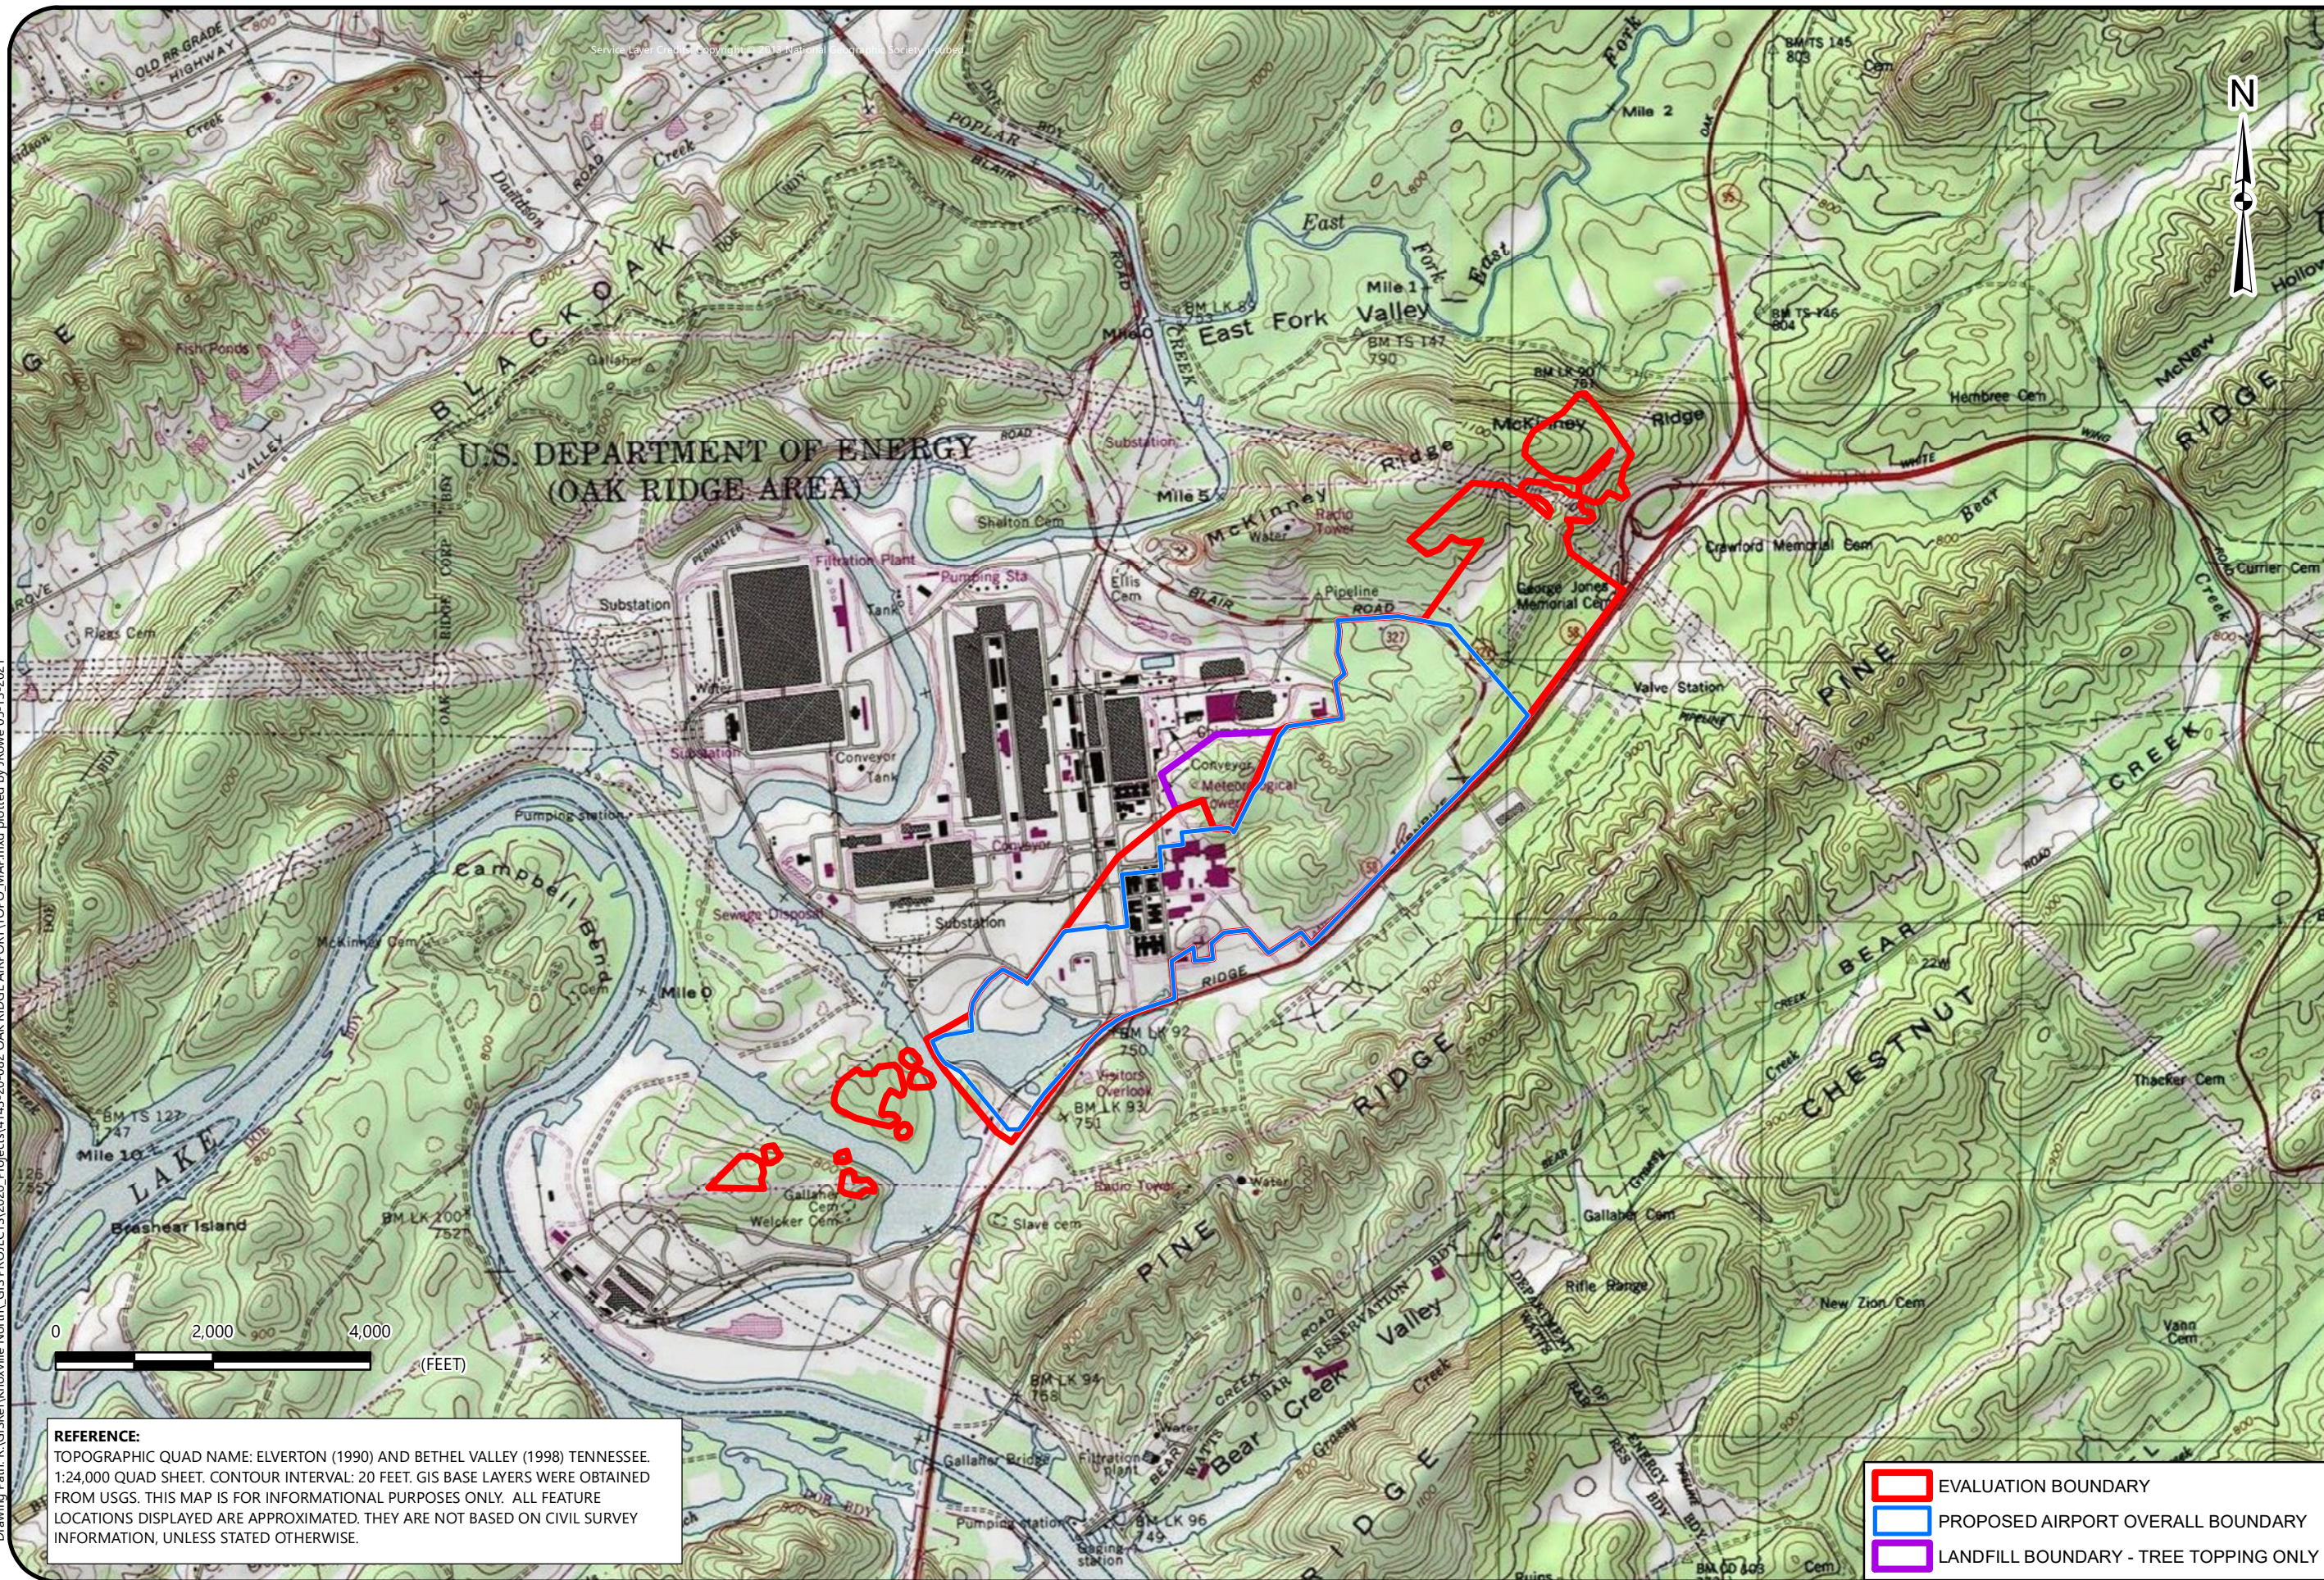

The senior reviewer for this project is Mr. Eric M. Solt. Mr. Solt has 30 years of experience in conducting environmental assessment activities. Please refer to Mr. Solt's resume in Appendix VI for further details.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

# EXECUTIVE SUMMARY

## TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

## DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

Proposed NPL..... Proposed National Priority List Sites  
NPL LIENS..... Federal Superfund Liens

### ***Federal Delisted NPL site list***

Delisted NPL..... National Priority List Deletions

### ***Federal CERCLIS list***

FEDERAL FACILITY..... Federal Facility Site Information listing

### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE..... Superfund Enterprise Management System Archive

### ***Federal RCRA generators list***

RCRA-VSQG..... RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

### ***Federal institutional controls / engineering controls registries***

LUCIS..... Land Use Control Information System

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### **Federal NPL site list**

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 NPL site within approximately 1.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b><i>OAK RIDGE RESERVATIO</i></b> Cerclis ID:: 404152 EPA Id: TN1890090003	<b><i>BETHEL VALLEY ROAD</i></b>	<b><i>0 - 1/8 (0.000 mi.)</i></b>	<b><i>0</i></b>	<b><i>8</i></b>

### **Federal CERCLIS list**

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 SEMS

## EXECUTIVE SUMMARY

site within approximately 1.5 miles of the target property.

### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there are 3 CORRACTS sites within approximately 1.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 RCRA-TSDF sites within approximately 1.5 miles of the target property.

## EXECUTIVE SUMMARY

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 RCRA-LQG sites within approximately 1.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-SQG site within approximately 1.5 miles of the target property.

### ***Federal institutional controls / engineering controls registries***

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 10/28/2020 has revealed that there is 1 US ENG CONTROLS site within approximately 1.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

## EXECUTIVE SUMMARY

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 10/28/2020 has revealed that there is 1 US INST CONTROLS site within approximately 1.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

### ***State and tribal landfill and/or solid waste disposal site lists***

TN SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environment & Conservation's list: Sanitary, Industrial, Demolition, Solid Waste Processing Facilities and Closed Landfills.

A review of the TN SWF/LF list, as provided by EDR, and dated 12/07/2020 has revealed that there are 2 TN SWF/LF sites within approximately 1.5 miles of the target property.

### **ADDITIONAL ENVIRONMENTAL RECORDS**

#### ***Other Ascertainable Records***

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 1.5 miles of the target property.

EPA ID: TNR000005397				

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 09/30/2017 has revealed that there are 3 2020 COR ACTION sites within approximately 1.5 miles of the target property.

Summary Details:

Conditions at proposal July 14, 1989): The Oak Ridge Reservation (ORR), operated by the U.S. Department of Energy (USDOE), covers about 58,000 acres in Oak Ridge, in Anderson and Roane Counties, Tennessee. The area around the reservation is predominately rural except for the City of Oak Ridge (population 28,000). ORR consists of three major operating facilities: Oak Ridge National Laboratory, a research lab that includes nuclear reactors, chemical plants, and radioisotope production labs; Oak Ridge Gaseous Diffusion Plant, a production complex previously engaged primarily in the enrichment of uranium-235; and the Y-12 Plant, located immediately adjacent to the City of Oak Ridge, which produces nuclear weapon components, processes nuclear materials, and performs other related functions. ORR operations generate a variety of radioactive, nonradioactive, and mixed radioactive and nonradioactive) hazardous wastes, many of which in the past were disposed of or stored on-site. Leakage from inactive disposal and storage facilities, coupled with spills and other accidental releases, has contaminated many areas in and around ORR. Metals, organics, and radionuclides have been detected in ORR soil, ground water, and surface water. At present, ground water contamination appears confined to ORR. A 1983 study by USDOE estimates that 733,000 pounds of elemental mercury were released to the environment in the 1950s and 1960s around the Y-12 Plant. Most of the

contamination around Y-12 is confined to the upper 10 feet of soils and fill. Additional studies revealed that some 170,000 pounds of mercury are contained in the sediments and floodplain of about a 15-mile length of East Fork Poplar Creek EFPC), which has its headwaters at Y-12, and that some 500 pounds of mercury annually leave this watershed. Mercury and cesium-137 have been detected at higher than background levels in sediments of the Clinch River and the Tennessee River near Chattanooga, some 118 miles downstream of ORR. Seven water intakes in this 118-mile stretch provide drinking water to an estimated 43,200 people. Wetlands in the Blyth Ferry Water Fowl Management Area are also near the 118-mile stretch of the river. EFPC flows through the City of Oak Ridge, exposing people to mercury-contaminated soils in the easily accessible areas of the floodplains of the creek. USDOE has removed soil at several locations along the creek where mercury concentrations were particularly high. USDOE is investigating ORR under its Comprehensive Environmental Assessment and Response Program. Under the program, USDOE is conducting studies involving requirements of CERCLA and of permits issued under Subtitle C of the Resource Conservation and Recovery Act RCRA). The permits call for closing some units on ORR, conducting postclosure monitoring, and evaluating over 500 solid waste management units under RCRA Sections 3004 u) and v). Status November 21, 1989): USDOE investigations continue.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN  
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste Description:	2,4,5-TRICHLOROPHENOL
Waste Code:	D042
Waste Description:	2,4,6-TRICHLOROPHENOL
Waste Code:	D043
Waste Description:	VINYL CHLORIDE
Waste Code:	D092
Waste Description:	Not Defined
Waste Code:	F001
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F004
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F005
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS

CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006  
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007  
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: F008  
Waste Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F009  
Waste Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F023  
Waste Description: WASTES (EXCEPT WASTEWATER AND SPENT CARBON FROM HYDROGEN CHLORIDE PURIFICATION) FROM THE PRODUCTION OF MATERIALS ON EQUIPMENT PREVIOUSLY USED FOR THE PRODUCTION OR MANUFACTURING USE (AS A REACTANT, CHEMICAL INTERMEDIATE, OR COMPONENT IN A FORMULATING PROCESS) OF TRI- AND TETRACHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE WASTES FROM EQUIPMENT USED ONLY FOR THE PRODUCTION OR USE OF HEXACHLOROPHENE FROM HIGHLY PURIFIED 2,4,5-TRICHLOROPHENOL.)

Waste Code: F027  
Waste Description: DISCARDED UNUSED FORMULATIONS CONTAINING TRI-, TETRA-, OR PENTACHLOROPHENOL OR DISCARDED UNUSED FORMULATIONS CONTAINING COMPOUNDS DERIVED FROM THESE CHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE FORMULATIONS CONTAINING HEXACHLOROPHENE SYNTHESIZED FROM PREPURIFIED 2,4,5-TRICHLOROPHENOL AS THE SOLE COMPONENT.)

Waste Code: F039  
Waste Description: LEACHATE RESULTING FROM THE TREATMENT, STORAGE, OR DISPOSAL OF WASTES CLASSIFIED BY MORE THAN ONE WASTE CODE UNDER SUBPART D, OR FROM A MIXTURE OF WASTES CLASSIFIED UNDER SUBPARTS C AND D OF THIS PART. (LEACHATE RESULTING FROM THE MANAGEMENT OF ONE OR MORE OF THE FOLLOWING EPA HAZARDOUS WASTES AND NO OTHER HAZARDOUS WASTES RETAINS ITS HAZARDOUS WASTE CODE(S): F020, F021, F022, F023, F026, F027, AND/OR F028.)

Waste Description:	ETHANE, 1,1-DICHLORO- (OR) ETHYLIDENE DICHLORIDE
Waste Code:	U077
Waste Description:	ETHANE, 1,2-DICHLORO- (OR) ETHYLENE DICHLORIDE
Waste Code:	U078
Waste Description:	1,1-DICHLOROETHYLENE (OR) ETHENE, 1,1-DICHLORO-
Waste Code:	U079
Waste Description:	1,2-DICHLOROETHYLENE (OR) ETHENE, 1,2-DICHLORO-,(E)-
Waste Code:	U080
Waste Description:	METHANE, DICHLORO- (OR) METHYLENE CHLORIDE
Waste Code:	U081
Waste Description:	2,4-DICHLOROPHENOL (OR) PHENOL, 2,4-DICHLORO-
Waste Code:	U088
Waste Description:	1,2-BENZENEDICARBOXYLIC ACID, DIETHYL ESTER (OR) DIETHYL PHTHALATE
Waste Code:	U101
Waste Description:	2,4-DIMETHYLPHENOL (OR) PHENOL, 2,4-DIMETHYL-
Waste Code:	U102
Waste Description:	1,2-BENZENEDICARBOXYLIC ACID, DIMETHYL ESTER (OR) DIMETHYL PHTHALATE
Waste Code:	U103
Waste Description:	DIMETHYL SULFATE (OR) SULFURIC ACID, DIMETHYL ESTER
Waste Code:	U107
Waste Description:	1,2-BENZENEDICARBOXYLIC ACID, DIOCTYL ESTER (OR) DI-N-OCTYL PHTHALATE
Waste Code:	U108
Waste Description:	1,4-DIETHYLENEOXIDE (OR) 1,4-DIOXANE

Waste Code:	D043
Waste Description:	VINYL CHLORIDE
Waste Code:	D092
Waste Description:	Not Defined
Waste Code:	F001
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F004
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F005
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:	F006
Waste Description:	WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.
Waste Code:	F007
Waste Description:	SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.
Waste Code:	F008
Waste Description:	PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.
Waste Code:	F009
Waste Description:	SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.
Waste Code:	F023
Waste Description:	WASTES (EXCEPT WASTEWATER AND SPENT CARBON FROM HYDROGEN CHLORIDE PURIFICATION) FROM THE PRODUCTION OF MATERIALS ON EQUIPMENT PREVIOUSLY USED FOR THE PRODUCTION OR MANUFACTURING USE (AS A REACTANT, CHEMICAL INTERMEDIATE, OR COMPONENT IN A FORMULATING PROCESS) OF TRI- AND TETRACHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE WASTES FROM EQUIPMENT USED ONLY FOR THE PRODUCTION OR USE OF HEXACHLOROPHENE FROM HIGHLY PURIFIED 2,4,5-TRICHLOROPHENOL.)
Waste Code:	F027
Waste Description:	DISCARDED UNUSED FORMULATIONS CONTAINING TRI-, TETRA-, OR PENTACHLOROPHENOL OR DISCARDED UNUSED FORMULATIONS CONTAINING COMPOUNDS DERIVED FROM THESE CHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE FORMULATIONS CONTAINING HEXACHLOROPHENE SYNTHESIZED FROM PREPURIFIED 2,4,5-TRICHLOROPHENOL AS THE SOLE COMPONENT.)
Waste Code:	F039
Waste Description:	LEACHATE RESULTING FROM THE TREATMENT, STORAGE, OR DISPOSAL OF WASTES CLASSIFIED BY MORE THAN ONE WASTE CODE UNDER SUBPART D, OR FROM A MIXTURE OF WASTES CLASSIFIED UNDER SUBPARTS C AND D OF THIS PART. (LEACHATE RESULTING FROM THE MANAGEMENT OF ONE OR MORE OF THE FOLLOWING EPA HAZARDOUS WASTES AND NO OTHER HAZARDOUS WASTES RETAINS ITS HAZARDOUS WASTE CODE(S): F020, F021, F022, F023, F026, F027, AND/OR F028.)
Waste Code:	P015
Waste Description:	BERYLLIUM
Waste Code:	P022
Waste Description:	CARBON DISULFIDE
Waste Code:	P028
Waste Description:	BENZENE, (CHLOROMETHYL)- (OR) BENZYL CHLORIDE

Waste Code:	U188
Waste Description:	PHENOL
Waste Code:	U191
Waste Description:	2-PICOLINE (OR) PYRIDINE, 2-METHYL-
Waste Code:	U196
Waste Description:	PYRIDINE
Waste Code:	U210
Waste Description:	ETHENE, TETRACHLORO- (OR) TETRACHLOROETHYLENE
Waste Code:	U211
Waste Description:	CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-
Waste Code:	U213
Waste Description:	FURAN, TETRAHYDRO-(I) (OR) TETRAHYDROFURAN (I)
Waste Code:	U218
Waste Description:	ETHANETHIOAMIDE (OR) THIOACETAMIDE
Waste Code:	U219
Waste Description:	THIOUREA
Waste Code:	U220
Waste Description:	BENZENE, METHYL- (OR) TOLUENE

Waste Description:	BENZENE, 1,3-DIISOCYANATOMETHYL- (R,T) (OR) TOLUENE DIISOCYANATE (R,T)
Waste Code:	U224
Waste Description:	Not Defined
Waste Code:	U225
Waste Description:	BROMOFORM (OR) METHANE, TRIBROMO-
Waste Code:	U226
Waste Description:	ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM
Waste Code:	U227
Waste Description:	1,1,2-TRICHLOROETHANE (OR) ETHANE, 1,1,2-TRICHLORO-
Waste Code:	U228
Waste Description:	ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE
Waste Code:	U235
Waste Description:	1-PROPANOL, 2,3-DIBROMO-, PHOSPHATE (3:1) (OR) TRIS(2,3,-DIBROMOPROPYL) PHOSPHATE
Waste Code:	U236
Waste Description:	2,7-NAPHTHALENEDISULFONIC ACID,3,3'-[(3,3'-DIMETHYL[1,1'-BIPHENYL]-4,4'-DIYL)BIS(AZO)BIS[5-AMINO -4-HYDROXY]-, TETRASODIUM SALT (OR) TRYPAN BLUE
Waste Code:	U238
Waste Description:	CARBAMIC ACID, ETHYL ESTER (OR) ETHYL CARBAMATE (URETHANE)
Waste Code:	U239
Waste Description:	BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)
Waste Code:	U359
Waste Description:	ETHANOL, 2-ETHOXY- (OR) ETHYLENE GLYCOL MONOETHYL ETHER
Waste Code:	U383
Waste Description:	CARBAMODITHIOIC ACID, DIMETHYL, POTASSIUM SALT (OR) POTASSIUM DIMETHYLDITHIOCARBAMATE

Environmental Interest/Information System:  
 NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.  
 AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.  
 US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.  
 US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.  
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

NON-TRANSIENT NON-COMMUNITY WATER SYSTEM

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005  
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006  
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007  
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: F008  
Waste Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F009  
Waste Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F011  
Waste Description: SPENT CYANIDE SOLUTIONS FROM SLAT BATH POT CLEANING FROM METAL HEAT TREATING OPERATIONS.

Waste Code: F023  
Waste Description: WASTES (EXCEPT WASTEWATER AND SPENT CARBON FROM HYDROGEN CHLORIDE PURIFICATION) FROM THE PRODUCTION OF MATERIALS ON EQUIPMENT PREVIOUSLY USED FOR THE PRODUCTION OR MANUFACTURING USE (AS A REACTANT, CHEMICAL INTERMEDIATE, OR COMPONENT IN A FORMULATING PROCESS) OF TRI- AND TETRACHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE WASTES FROM EQUIPMENT USED ONLY FOR THE PRODUCTION OR USE OF HEXACHLOROPHENE FROM HIGHLY PURIFIED 2,4,5-TRICHLOROPHENOL.)

Waste Code: F027  
Waste Description: DISCARDED UNUSED FORMULATIONS CONTAINING TRI-, TETRA-, OR PENTACHLOROPHENOL OR DISCARDED UNUSED FORMULATIONS CONTAINING COMPOUNDS DERIVED FROM THESE CHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE FORMULATIONS CONTAINING HEXACHLOROPHENE SYNTHESIZED FROM PREPURIFIED 2,4,5-TRICHLOROPHENOL AS THE SOLE COMPONENT.)

SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Waste Code:	F039
Waste Description:	LEACHATE RESULTING FROM THE TREATMENT, STORAGE, OR DISPOSAL OF WASTES CLASSIFIED BY MORE THAN ONE WASTE CODE UNDER SUBPART D, OR FROM A MIXTURE OF WASTES CLASSIFIED UNDER SUBPARTS C AND D OF THIS PART. (LEACHATE RESULTING FROM THE MANAGEMENT OF ONE OR MORE OF THE FOLLOWING EPA HAZARDOUS WASTES AND NO OTHER HAZARDOUS WASTES RETAINS ITS HAZARDOUS WASTE CODE(S): F020, F021, F022, F023, F026, F027, AND/OR F028.)

METHACRYLATE (I,T)

Waste Code: U163  
Waste Description: GUANIDINE, N-METHYL-N'-NITRO-N-NITROSO- (OR) MNNG

Waste Code: U165  
Waste Description: NAPHTHALENE

Waste Code: U167  
Waste Description: 1-NAPHTHALENAMINE (OR) ALPHA-NAPHTHYLAMINE

Waste Code: U169  
Waste Description: BENZENE, NITRO- (OR) NITROBENZENE (I,T)

Waste Code: U170  
Waste Description: P-NITROPHENOL (I,T) (OR) PHENOL, 4-NITRO-

Waste Code: U176  
Waste Description: N-NITROSO-N-ETHYLUREA (OR) UREA, N-ETHYL-N-NITROSO-

Waste Code: U177  
Waste Description: N-NITROSO-N-METHYLUREA (OR) UREA, N-METHYL-N-NITROSO-

Waste Code: U179  
Waste Description: N-NITROSOPIPERIDINE (OR) PIPERIDINE, 1-NITROSO-

Waste Code: U180  
Waste Description: N-NITROSOPYRROLIDINE (OR) PYRROLIDINE, 1-NITROSO-

Waste Code: U181  
Waste Description: 5-NITRO-O-TOLUIDINE (OR) BENZENAMINE, 2-METHYL-5-NITRO

Waste Code: U182  
Waste Description: 1,3,5-TRIOXANE, 2,4,6-TRIMETHYL- (OR) PARALDEHYDE

Waste Code: U184  
Waste Description: ETHANE, PENTACHLORO- (OR) PENTACHLOROETHANE

Waste Code: U185  
Waste Description: BENZENE, PENTACHLORONITRO- (OR) PENTACHLORONITROBENZENE (PCNB)

Waste Code: U188  
Waste Description: PHENOL

Waste Code: U194  
Waste Description: 1-PROPANAMINE (I,T) (OR) N-PROPYLAMINE (I,T)

Waste Code: U196  
Waste Description: PYRIDINE

Waste Code: U204  
Waste Description: SELENIOUS ACID (OR) SELENIUM DIOXIDE

Waste Code: U208  
Waste Description: 1,1,1,2-TETRACHLOROETHANE (OR) ETHANE, 1,1,1,2-TETRACHLORO-

Waste Code: U209
